OILS, PAINTS AND GLASS.—Linseed oil is firmer at 45c. for boiled, and 42c. for raw in single barrels. Turpentine is steady still at late advance. Glass rather scarce at moment, but considerable stock yet to come forward: there is no weakening on recent advance. Leads are advanced 25c. all around. Castor oil is very firm, and it is claimed would now cost 9½c. to lay down. We quote:—Turpentine, one to four barrels., 44c.; five to nine barrels., 43c., net 30 days. Linseed oil, raw, one to four barrels., 42c.; five to nine barrels, 41c.; boiled, one to four barrels, 45c.; five to nine brls., 44c., net 30 days; olive oil, machinery, 90c.; Nfld cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 9 to 9½c. as to quantity. Leads (chemically pure and first-class brands only), $5.25, No. 1, $4.87½; No. 2, $4.50; No. 3, $4.12½; No. 4, $3.75; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders,

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

BRITISH MARKETS.

Messrs. Gillespie & Co.'s prices current, dated Liverpool, August 5th, 1897, say: Sugar—Raw is firm, and refined is quoted at an advance of fully 6d. per. cwt. generally. Rice—Cleaned is in improved demand at rather higher prices. Chemicals—Sodas, etc., show little alteration since our last. Roll and flour sulphur are firmer at 6s. 3d. and 7s. 6d. per cwt. respectively. Cream tartar is quoted at 76s. 6d per cwt. less 2½ per cent. on spot here. Oils—Castor has advanced to 3⅜d. to 3 7-16d. per lb. Olive remains as last quoted. Palm generally is 20s. to 25s. per ton dearer.

Freights are about the same as last:—Montreal—Groceries, 7s. 6d. to 10s; oils, 7s. 6d. to 12s. 6d. Toronto—Groceries, 19s. to 25s.; chemicals, 21s. to 29s; oils, 21s. to 30s. Halifax, N.S.—Groceries, chemicals and oils, 12s. 6d. to 15s. St. John, N.B.—Groceries, chemicals and oils, 15s. to 20s.

LIVERPOOL WOOD MARKET.

Farnworth & Jardine's wood circular, dated Liverpool, 5th August, 1897, says;—

"The arrivals from British North America during the past month have been 58 vessels, 65,239 tons, against 57 vessels, 54,226 tons during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1895, 1896 and 1897 has been 201,334, 272,296 and 288,708 tons respectively.

"Business during the month has generally been dull; imports have been on too extensive a scale, and although the deliveries have been fair, stocks have accumulated and in many instances are much too heavy; values have been difficult to maintain, in some articles a considerable decline has to be recorded.

"CANADIAN WOODS—Of waney and square pine the import has been large; there is a fair demand for first-class wood, and little change in value to report; second-class is difficult to move, and prices are low; the stock is now quite ample. Square pine has been imported more moderately, but the demand continues very dull, and values remain unchanged. Red pine has not been imported; there is a little more enquiry for large wood, but small wood is neglected. Oak has again been imported freely; the deliveries, chiefly of first-class wood, have been large, and prices remain firm; inferior wood can only be sold at extremely low prices. Elm is in fair request, but there is no change in value. *Ash.*—There is a little better enquiry, but the stock is sufficient. *Pine Deals, Boards, etc.*—The arrivals have been very heavy, the deliveries have been satisfactory, but the stock is much too large; there is no change in value to report.

"NEW BRUNSWICK AND NOVA SPRUCE AND PINE DEALS.—Of spruce deals the import during the past month has been one of the heaviest on record, and the stock is now excessive. Sales have been most difficult to effect and prices have had a declining tendency throughout the month. The figures showing the stock in the table below do not include a large quantity which has gone up the Manchester Canal and unsold, estimated at about 10,000 standards Pine deals are only saleable at very low rates,

"BIRCH.—The import of logs has been large, the bulk of which being forced off at auction sales at extremely low prices; this has had the effect of increasing the deliveries, but the stock is quite ample, and shipments should be reduced. Birch planks are more enquired for, but prices continue very low.

"OREGON AND BRITISH COLUMBIAN PINE.—There have been no arrivals, though a cargo is shortly due; the deliveries have been fairly satisfactory, and the stock is now reduced to a moderate compass; there is no change in values to report.

"SEQUOIA (CALIFORNIAN REDWOOD).—Recent sales have been only of retail quantities, but two cargoes have just arrived, and this will no doubt stimulate the demand; prices, however, are rather low.

"PITCH PINE.—The arrivals during the past month have been 10 vessels, 12,224 tons, against 9 vessels, 10,295 tons, during the like period last year. Of hewn, we have again had a large import; the consumption has been light, and the stock is considerably increased. Of sawn, the import has been fairly heavy, and as the consumption has only been moderate, the stock is increased, although not excessive. Deals and Boards have again been imported freely; there has, however, been a good consumption, but the present stock is ample."

Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,

THE BRITISH ASSOCIATION AGAIN.

Science has doubtless added not a little to its store both of theoretic and practical wealth since the British Association last met in Canada. Science has also lost some of her most illustrious names, and at the Toronto meeting faces and voices will be missed that roused and inspired the students and workers who had the privilege of seeing and hearing them thirteen years ago. But such losses are in the nature of things, and it would be unphilosophic to bewail them. If some distinguished names have disappeared from the roll of the association, the work that was begun or achieved signal triumphs under their auspices is still successfully conducted, and there has been no pause in the search for knowledge and the development of this earth of ours. As we look through the titles of the papers in the different sections in the Montreal volume, we cannot help being struck by the large number of Canadian contributors. Nor are these names confined to any single section or group of sections. We find them distributed through them all.

In Section A, Dr. Alexander Johnson called attention to the number of wrecks, attended with great loss of life and property, that had taken place through want of knowledge of the tides and tidal currents in the Gulf of St. Lawrence and the Atlantic coast of the Dominion. How often has the woeful tale been forced upon our attention during more than a dozen years, and yet, though Dr. Johnson and others have not failed to carry out the association's desire on the subject, and the Government for a time did something towards so deserving a cause, instead of recognizing the need of fuller effort and provision, our rulers have let the movement come to a standstill for want of funds. In section B papers were read illustrating the fertility of North-west prairie soils, which were afterwards published in pamphlet form. The late Dr. T. Sterry Hunt was also present. Section C. (geology) is one in which Canada has come to the front all through the Victorian era, and it was well represented in 1884 both by veterans and younger workers. In section D. (biology), the late Dr. Carpenter, and Dr. Osler, then attached to McGill's medical faculty, attracted the admiration of men whom we recognize to-day as their equals. Dr. (Sir W.) Hingston discussed the "Climate of Canada." Dr. Dallinger showed an important apparatus, then new, for studying the behavior of septic organisms under change of temperature. Sections E. and F. (geography and economic science) were especially well represented by Canadian essayists—the economic contributions being afterwards brought out in a separate volume. G. (mechanical science), under the presidency of Sir F. J. Bramwell, was also fairly supplied with special papers bearing on Canadian subjects, while section H. (under the control of Dr. Taylor), was wholly devoted to the anthropology of Canada.

The local committees had done their work zealously and effectively, and the principal of McGill University, who was successively president of the American and British Associations, was, with his colleagues, unwearied in judicious service. The railways offered the visitors from over the sea the use of their lines, and some of their members went as far west as the C.P.R. would take them. A number of pamphlets published in 1885—some of them having been originally read before learned societies in the United Kingdom—disclosed what a happy surprise Canada was to some of those students of nature. Some of them had, it is true, been prompted beforehand, by Principal Grant and Mr. Colmer, C.M.G., secretary to the High Commissioner, but what a resident or native tells about a country often differs considerably from what that country suggests to the intelligent visitor who observes for himself. The Englishmen saw sources of attraction in Canada that their ciceroni never thought of mentioning. Some of them, indeed, obstinately fixed their attention on matters that their hosts thought of comparatively little interest. On the whole, however, learned members of the association were greatly pleased with what they saw in Canada, and with the treatment they received. Sir Lyon (now Lord) Playfair said on the opening day (August 27, 1884), that such a gathering was long to be remembered in the annals of science. If we began to quote from the speeches and reports regarding Montreal's and Canada's hospitality, it would be hard to know when to stop.

The question has been asked, who first started the idea of inviting the association to Canada in 1884? Our impression is that it was Dr. A. Johnson, dean of the faculty of arts, and vice-chancellor in McGill University. It was on that occasion that the veteran principal of McGill received the honor of knighthood, having already been made C.M.G. It is to be hoped that Montreal will give a hearty support to the Toronto meeting. The meeting concerns, not the Canadian Institute merely, or the city of Toronto, but the whole of Canada. We are, moreover, to-day in a much better position to show the visitors the vast range and varied wealth of the Dominion than we were thirteen years ago.—*Montreal Gazette.*

THE PRINCIPAL ASSET.

The following is from a circular letter issued by the home office of the Liverpool & Globe, which does a life insurance business:

"Between thirty and forty the calls upon most of us for sheer necessities are greater than at any period of life, whilst a man's market value does not usually touch highwater mark until a decade later, and the amassment of any considerable sum becomes out of the question until comparatively old age. With supply and demand running nearly neck and neck, there is little chance of putting much by, and it takes quite a lot of self-denial to make up a solitary £100. But with life assurance it is different.

"You start with your capital sum, and pay for it as you go along. You make sure of the investment from the beginning, instead of waiting weary years until the amount be saved; and as you can create a large amount of capital for a very small outlay, it follows that the life policy becomes the most valuable part of one's estate, especially as the sum assured is usually at a handsome premium at the time of realization by the means of bonus additions.

"A fortune of £600 all told is not a munificent one for a widow and family to keep afloat on, but it is, at least six times better than a paltry £100; and yet there are endless numbers content to leave such a monument to their memory as a few household goods and chattels and a doctor's bill. It is, no doubt, thoughtlessness, but evil is wrought from want of thought as well as want of heart. The cure of this want of thought is surely a high moral duty, for a good man leaveth an inheritance. To all but the few the only practical way of leaving one worthy of the name is by taking a policy for a good round amount, and when an agent taps you on the the shoulder and bids you be mindful of these things, remember that upon your decision may hang the destiny of your family.

"If the chance came once only in a lifetime, perhaps more would eagerly seize upon it as one of the greatest boons of civilization, but because it sometimes comes more than once, too many realize to their cost the truth of the Spanish proverb, "In the village of 'By-and-bye' is the hostelry of 'Never.'"

—Here is a case in which a man will have "cigarettes to burn." It is related by a St. John's, Nfld., paper of July 30: This morning Bowring Bros. received one of the largest orders for cigarettes ever given to one firm in this city. We learn that an offer from H.M.S. "Pelican" took 100,000, paying $65 cash, for what will go up in smoke.

MONTREAL HARBOR PLANS.

Mr. Tarte now appears as the father, or step-father of another harbor plan, which, like all those that have found favor in his sight, needlessly reduces, as compared with "Plan No. 6," the amount of wharf accommodation in that part of the harbor where those who do the business of the harbor ask for most accommodation. Plan No. 6, provides for five piers, of varying length, between the present Victoria pier and the canal entrance. It has been before the public for years. It was designed by competent engineers, commended by the shipping interests, and formally sanctioned by the Harbor Trust in 1890. No engineering authority has condemned it as impracticable. It aims at giving the maximum of accommodation to ships where the ships want it. It is a business plan. Business considerations require that in its general principles it should be carried out. The newest Tarte plan reduces the number of piers from four to six (including the modification of the Victoria pier) runs the piers out from the shore with less slope, and extends the whartage space between each two piers. This latter, if the plan were adopted, would be largely wasted room. It would be difficult to bring ships alongside the inner berths, with the pier berths occupied and the basins filled with lighters and elevators. To provide them, after they were brought in, with loading and shed room would involve a waste of wharfage space. The new Tarte plan is good only in so far as it follows the idea of Plan No. 6. It is inferior where it loses sight of the objects kept in view in designing Plan No. 6, the accommodation of the commerce of the port at the place where accommodation is demanded. It is, therefore, to be condemned.

It is sometimes urged, as if there were two interests in Montreal's trade, and a real rivalry between the two sections, into which foolish and vicious men, for their own purposes strive to divide it, that the East End has been unfairly treated in the past. The facts do not bear out the claim. It is not very long ago that the east end of the harbor business was at the Dalhousie Square depot. It is now at the St. Lawrence sugar refinery, a good two miles further down stream. The extent of the wharfage at present is, approximately:

	Lineal feet.
In deep water over 20 feet....	24,690
In water under 20 feet	6,080
Total	30,770

In twenty-five years the wharfage has been practically doubled. Taking the C.P.R. elevators as the starting point, there has in that time been built:

	Lineal feet.
Eastward, in deep water over 20 feet	9,390
Eastward, in shallow water, under 20 feet..	2,790
Total	12,180
Westward, in deep water	2,870

The increase in wharf accommodation in the period covered, has therefore, been four times as great east, from what is now about the centre of the wharf line, as it has been to the west. The trade that has sought this East End—the sugar, the coal, and the lumber—has been provided for, and the whole of Montreal has been benefited thereby The whole of Montreal will suffer if the efforts now being made to cripple the trade that seeks another part of the harbor are successful.—*Montreal Gazette.*

—Give no bounties, make equal laws, secure life and property, and you need not give alms. Open the doors of opportunity to talent and virtue and they will do themselves justice, and property will not be in bad hands. In a free and just commonwealth property rushes from the idle and imbecile to the industrious, brave and persevering.—Emerson.

DECISIONS IN COMMERCIAL LAW.

NORREYS v. HODGSON.—The action was originally brought to recover £210, commission payable by the Imperial Insurance Company in respect of an insurance on the plaintiff's life for £15,000. The insurance company were made defendants in this action, but they paid the sum into the court, and the action was continued against the defendant Hodgson only. The plaintiff was desirous of obtaining a loan of £20,000 upon some revisionary interests which would come to him upon his father's death. He went to the defendant Hodgson, who was an insurance broker, and asked him to effect the loan. Hodgson agreed to do so, part of the transaction being that the plaintiff's life should be insured. The plaintiff signed a commission note, by which he agreed to pay Hodgson one per cent. on the amount of the loan. The loan and insurance were carried out with the Imperial Insurance Company. The insurance company agreed to pay Hodgson £210 as commission for introducing the insurance. The question was whether Hodgson was liable to account to the plaintiff as his principal for the £210 commission. The Court of Appeal in England held that there was nothing in the nature of a secret commission, and that the two commissions were for wholly different things, and that therefore the defendant was entitled to keep the commission.

OGILVIE v. LITTLEBOY.—Action by the donor to set aside two voluntary deeds of gift founding two charities. Held by the Court of Appeal in England that where there is no fraud, no undue influence, no fiduciary relations between donor and donee, and no mistake induced by those who derive any benefit from it, a gift (whether made by mere delivery or by deed) is binding on the donor, and such donor can only get back property which he has given away by showing that he was under some mistake of so serious a character as to render it unjust on the part of the donee to retain the property.

LEOPARD v. LITOWN.—A. advertised a sale by auction. B. and C. agreed that C. should buy some cases of sweet nitre to be afterwards disposed of to their mutual profit. C. bought the cases for £5, and afterwards agreed to sell them to B. for £6. B. resold to D. for £13 10s.; but meantime C. had sold and delivered the case to E. B. sued C. for £7 10s. damages. Held that there is nothing illegal in a knockout sale ; if the vendor does not want to take the bids offered, he must put on a reserve price or reserve the right to employ the puffer ; and that B. was entitled to sue.

EXCHANGE TELEGRAPH CO. v. CENTRAL NEWS AND COLUMN TELEGRAPH SYNDICATE.—A news agency collected information about horse races and telegraphed it to subscribers, on condition that they should not communicate it to any other party. Held by Sterling, J., that the news agency, having spent time, labor and money in getting information which was not known to all the world when the agency got it and transmitted it to their subscribers, was entitled to an injunction to prevent one of their subscribers communicating it to a third party in breach of his contract, and also to restrain the third party from inducing the subscriber to break his contract by communicating the information.

THE steamer "Cambria," of the "Soo" line, which was driven ashore near Sarnia, Ont., some weeks ago, will not go into service again this season. Repairs on the boat are found to be too expensive, requiring an outlay of $6,000.

THE GURNEY FOUNDRY CO.,
Limited.,
TORONTO.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

VERY little flax was sown in the vicinity of Mitchell this year, as the result of a depressed market.

A SHIPMENT of 526 bicycles was made last Saturday to Australia from Toronto. The shipment was valued at $31,600.

DIFFICULTIES with the Kingsville Natural Gas and Oil Co. have been settled by the town purchasing the entire plant of the company.

THE steamer "City of Naples" recently brought a big cargo of corn, consisting of 100,000 bushels, from Chicago to Owen Sound, Ont.

THE immense new basin built in connection with the Chatham waterworks, and which is 900 feet long by 300 feet wide, is said to be nsecure.

SHERBROOKE proposes to purchase the waterworks from the Sherbrooke Gas and Water Company. Their value will be submitted to arbitration.

STRATFORD city council may construct a system of waterworks, as a result of a difference of opinion as to the price of the works by which the city is at present supplied.

THE Winnipeg city council, in a streak of economy, has dismissed the assistant city clerk, veterinary inspector, health inspector, and half a dozen other civic officials.

A NUMBER of wire-rolling mills in and around Susseldorf, Prussia, have formed themselves into a syndicate for the sale of their output. So far, eighteen works have joined in the combination, which will begin operations at once. The selling office has been opened at Hagen, and all sales will be made through it, the staff of the office being furnished by the members of the syndicate.

ANOTHER piece of gold-bearing quartz, which will yield fully 200 ounces of gold, was taken from the Touquoy mine. This quartz is much richer than that secured on Thursday. Within a week, from $8,000 to $10,000 worth of the precious metal has been taken out of this now famous property, which stands at the head of all Nova Scotia gold mines yet discovered.—*Truro, N.S., News.*

THE Dartmouth, N.S., *Weekly* says: "Large quantities of binder twine are being shipped to the North-West. This is unusual at this season of the year, and it is owing to the immense crop of grain in that region. There was over 1,600 tons of twine left over last year, owing to the small crop and overproduction; that has all gone and hands are working full time to keep up with the demand."

BRITISH COLUMBIA lumber dealers have a new field for enterprise in reaching out for a share of the business in connection with the Siberian railway. San Francisco has secured a number of orders for cargoes, which will be filled from the Columbia River for Vladivostock. It may turn out that some of the cargoes which recently left the province for Shanghai have gone to Siberia.

THE farmers of Portage la Prairie estimate that the wheat crops in that district will average twenty bushels per acre. Half the grain is cut and with favorable weather all the crops will have been saved within a fortnight. Most of the farmers are arranging to thresh and market early in order to secure the prevailing high prices; they say if the price should drop below seventy cents they will hold until winter.

IN 1895 there were only seven iron foundries working in the south of Russia, which consumed about 833,350 tons of mineral fuel, and produced 561,300 tons of cast iron. By the close of 1897 there will be twelve such factories, which will require about 1,167,700 tons of fuel, with the production of about 917,000 tons of cast iron. Besides these, during this year there will be working in that district about twenty iron boiler and other such works, which will export about 917,000 tons of manufactured goods, etc., by rail to all parts of the empire.

As compared with 1892-93 the value of imports of railway material into India rose by 333 per cent. in 1896-97, the total value standing at considerable over one crore. For the first time imports of railway materials and rolling stock on behalf of private enterprise are largely in excess of those on behalf of the Government. Although these latter in the past two years have greatly exceeded the value of imports in previous years, still for 1896-97 the total value for Government railway materials is less by nearly half a crore than that quoted against private importations.

THE auction sale of berth limits in the Algoma, Nipissing and Rainy River districts last week realized to the Government $265,587 in bonuses. The prices obtained were remarkably good in view of the Dingley duty against lumber, and the possible imposition of an export tax by the Dominion Government. The highest price obtained was $6,600 a mile for berth No. 4, in the township of Harmer, which went to Thos. Hall, of Pembroke, the total purchase price being $51,150. None of the nine berths offered for sale in the Rainy River district brought any reasonable offers, and all were withdrawn.

Mercantile Summary.

THE new one and two dollar Dominion bills have been issued. In design they are replete with patriotic suggestions.

THE assignment is reported of Mrs. M. A. Spurr, general store, Torbrook, N.S. She is the wife of G. E. Spurr, who was unsuccessful in 1893.

E. RUELLAND, a Quebec grocer, has failed, showing apparent assets of about $1,100 to pay liabilities of $2,200. A settlement at 25 cents is probable.

R. A. C. BROWN, a St. John, N.B., shoe dealer, is reported to have suspended. He failed before in 1894, when his estate paid about 35 cents on the dollar.

A. E. MCKENZIE & Co., grain merchants, of Brandon, have purchased from Arch. McBean & Son, Winnipeg, the elevator situated at the Northern Pacific Railway track, Brandon.

THE Rat Portage *Miner* states that one result of the visit to that town of the Canadian Pacific Railway officials last Saturday was the decision to build a new depot and go on with other improvements.

THE Prince Albert *Advocate* says grain cutting in that vicinity is now general. The crops are now heavy, and are expected to turn out the best that has been harvested in the district for the past twelve years.

THE Macleod *Gazette* says it is expected that thirty miles of grading will be completed by the 24th inst. on the Crow's Nest Pass road. Work on the C. & E. Railway bridge across the Old Man's River is being pushed forward rapidly.

A MEETING of the creditors of C. Vallee & Frere, dry goods, etc., Montreal, was held on the 23rd inst., at which it was deemed advisable that they should assign. The firm was embarrassed before in 1895, when they obtained an extension on liabilities of $31,000.

J. O. CLERMONT, a small Montreal grocer, has assigned after a seven years' business career, and owes about $2,000.——J. C Primeau, who began a small grocery business in St. Henri suburbs, Montreal, about 15 months ago, is asking a compromise at 25 cents cash.

THE embarrassment is reported of Waldron & Mader, dry goods dealers, Kingston, who have called a meeting of their creditors. They began business only last spring, buying the bankrupt stock of Prevost & Co., amounting to some $8,000, at 65 cents on the dollar.——J. E. Edwards, of Ottawa, late Edwards & McLeod, a grocer and milk dealer, has assigned.

THE United States Government has information that the Belgian Government is about to modify existing laws so as to allow an export bounty on Dutch refined sugars. It is said at the Treasury Department that this action will necessitate the levying of an increased rate of duty by the United States on these sugars equal to the export bounty paid. Similar action, it is said, is under consideration by the Netherlands Government.

THE North American Transportation and Trading Company, who run in connection with the Great Northern Railway, have made the unique announcement that they will contract to take parties from Seattle this fall up to the mouth of the Yukon river, at which point they will take charge of the passengers during the winter, supplying them with all necessaries. They contract further to take them up the river by the first boat in the spring, and guarantee that they shall arrive at Dawson City by June 1st.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

CONSTRUCTION on the Ottawa and New York Railway is being rushed pretty rapidly.

JOSIAH J. ANDERSON, of Sackville, N.B., has been appointed collector of customs at that port. The vacancy was caused by the dismissal of Mr. Milner.

THE Bank of British North America on Saturday last withdrew from the sub-treasury of the United States $150,000 gold for shipment to Canada. The Bank of Toronto also obtained by express $100,000.

A BY-LAW to grant the Toronto Rubber Shoe Company a bonus of $6,500 has been almost unanimously carried in Port Dalhousie. The vote stood 115 for and only 11 against. The people celebrated the event by having a huge bonfire.

MR. JAMES ROBINSON, wholesale boot and shoe jobber, Montreal, has purchased the whole of the present stock of the Bresse factory. It is reported that the price paid for this lot will reach nearly $50,000, and it will require several cars to ship it to Montreal.

EARLY last Friday night trains brought in 1,500 people to Winnipeg on harvesters' excursions, and during the night eight additional trains deposited some 3,000 or 4,000 more. Hotel accommodations were severely taxed, and several of the men walked round the streets all night.

THE miners' strike at Lethbridge, N.W.T., is settled, the men resuming work on the 24th inst. The miners secured for concession steady work, better ventilation and facilities for handling cars, but no increase in wages. The guaranteed output will be about 12,000 tons per month.

THE plot of land on the Hudson's Bay reserve upon which the gateway of old Fort Garry stands, has been presented to the City of Winnipeg as a jubilee gift by the Hudson's Bay Company. The gateway, which is all that remains of the historic fort, will be preserved, and the surrounding land be turned into a public park.

IT is not regarded at Ottawa, according to an advice, as probable that the Customs Department will grant the request of Toronto wholesale houses that French exporting houses in London and Liverpool be given the benefit of the reciprocal tariff on goods not sent into Canada direct from France. The goods must be direct from the country of origin on a through bill of lading, otherwise full duty will have to be collected.

EDWIN CORBIN, of Chicago, as a London, Eng., advice, Aug. 24th, states, has closed a deal amalgamating the United States and Canadian lake fisheries companies, whereby the control of twenty companies passes into the hands of a British company with £1,000,000 capital. Mr. Corbin sails for the United States next week, accompanied by a staff of British accountants, to talk over the business and initiate the consolidation.

THE convention of the Stationary Engineers at Brockville closed on the 25th inst., when the following officers were elected: President, E. J. Phillips, Toronto; vice-president, J. W Chapman, Brockville; secretary, J. G Robertson, Montreal; treasurer, R. Pettigrew, Hamilton; conductor, G. P. Risler, London; bookkeeper, T. C. Morrington, Toronto. The question as to the advisability of holding bi-annual sessions evoked a lively discussion, and was voted down. For the next convention Hamilton was selected. On behalf of the Association, Mayor Downey presented the past grand president with a valuable jewel.

THE *Japan Weekly Mail* says that one of the important demands for Japanese timber comes from China, where ties are wanted for the projected railways. The Japanese consul at Tientsin recently forwarded two reports on this subject. Lately three firms in England, France and Russia secured contracts to supply 240,000 ties. The English firm is to furnish 103,000, the French 60,000 and the Russian the remainder. The French firm has already received a consignment of Japanese timber, and the English contractors have placed an order in Japan for a part of their allotment. It is said that the export of timber from Siberia has been forbidden by the Russian Government, because of the enormous quantity required for the Siberian railway. Hence the contracts for the Chinese railways must be placed in Japan.

We shall be glad to receive the above from any one not having further use for them.

Address THE MONETARY TIMES
PRINTING CO., Limited,
Toronto.

Mercantile Summary.

THE *Examiner* has been informed that a wealthy gentleman, now resident on the island, has offered to subscribe $5,000 towards a new hotel for Charlottetown, P.E I., and a citizen of Summerside has offered double that amount for the same purpose.

ASSIGNEE LANGLEY has declared a first and final dividend of 50 cents on the dollar in the estate of J. B. Williamson, dry goods merchant, of Guelph, who assigned some time ago. The insolvent has also made an offer of 7½c. on the dollar extra for a discharge.

A MEETING of the creditors of Robert Linton & Co. was held at Montreal, when an offer of 35 cents cash was made for the estate, or 40 cents at 3, 6, 9 and 12 months. The majority of creditors accepted, but they have yet to hear from the foreign houses, particularly the English creditors, before the matter can be finally arranged.

AT a meeting of the creditors of Thomas Pinfold, liquor dealer, St. Thomas, held last week, two tenders for the stock were received from H. Lindop, 37½ cents, and from A. S. Smith and J. H. Price jointly. The first named tender was the lowest, and will likely be accepted, although the matter was laid over until this week.

ABOUT two years ago John Cornyn, an experienced printer, bought the Wingham *Advacate* at a cost of $1,000 cash. To this amount he shortly afterwards added $200 for necessary plant. The money was willed to him by a kind uncle. Now he assigns.——Another assignment is that of John Ahlberg, contractor, Rat Portage.

D. A. MACDONALD, a carpenter, and John Dow, laborer, started a hardware store in Caledon last March. Dow furnished the capital, about $1,200, which was left him by friends in Scotland. About the first of this month they dissolved partnership, and Dow continued, but afterwards he sold the stock to Kelly & Marshall, Orangeville, and assigned his book accounts to one of his creditors. After doing this he made a general assignment. Now he decides to labor on a farm as formerly, and no doubt he is a much wiser man, but the lesson has been an expensive one.

LAST March, McCutcheon & Raw, tailors Berlin, failed. The stock was then bought by H. E. Ahrens, but he soon ascertained that owing to strong competition he would be unable to succeed, and now he assigns with liabilities of $600.——Another assignment is that of James Purvis, carpenter, Hamilton.——In May, 1896, Wm. McKinnon bought the bankrupt general stock of McLaughlin & Co., at Rat Portage, paying on account of the purchase $700 cash, and securing the balance by a chattel mortgage of $2,100. Payments have not been properly met, and now the mortgage is foreclosed, and the business will be wound up.

R. F. HOLTERMANN, of Brantford, president of the Bee-keepers' Association of Ontario, is authority for the statement that the honey flow in Eastern Ontario and the Province of Quebec this year has been very meagre. In fact, it is a total failure, the worst for seventeen years. Clover and linden form the principal source of No. 1 honey. The linden blossom opened out during the intensely hot weather in July. This flower requires cool and moist weather to secure honey, and consequently the crop from this, as well as the thistle, has been almost nothing, leaving the total crop in Western Ontario a little below the average, and in Quebec and Eastern Ontario nil.

AFTER being connected with different printing firms and losing all his money, Thomas Moore started business under the cover of his wife's name, eighteen months ago, in this city, but this proved no better than his former ventures, and now an assignment is made. He owes about $1,000, and has nominal assets of nearly $600.

IN May, 1894, H. F. McQuire failed as a general storekeeper in Webbwood. His wife then bought the stock, giving the assignee a chattel mortgage for the full amount, $8,200. This appears to have been disposed of, as a new mortgage of $98) was given last month. Now we hear that she has made a settlement with creditors, paying 25 per cent. in cash.——An assignment has been made by Kerney & McCracken, dealers in tea, etc., Brussels. They have only been doing a small business, and a short time at it.——After being twenty years in the furniture business at Campbellford without making money, Walter Fogg has at length assigned. He cannot owe a large sum as his credit was very limited.

AT a meeting of the creditors of Lang & Meharry, Port Perry, held a few days ago, it was shown that there was a shortage of 3,300 in the estate. The insolvents made a small offer to creditors, which was left for the consideration of the inspectors whom they appointed. It seems that there is some dissatisfaction about a chattel mortgage, which is said to cover a claim dating back to the assignment of the firm in 1893, when a Montreal firm advanced sufficient money to enable them to pay 25 cents on the dollar. This now covers the stock, and it is contended that it was illegally given, and that too long a time elapsed between its execution and registration. If the mortgagee does not withdraw his claim, steps may be taken to set aside the mortgage.

D. BOUCHARD, keeping a small general store at Ste. Anne des Monts, on the Gaspe coast, and also dealing in fish, has arranged a compromise at 50 cents, at three, six and nine months, secured, on liabilities of about $2,700.——A young beginner, P. G. Miller, of St. Felix de Valois, Que., only in business in a small way about a year or so, has assigned.——V. St. Pierre, a blacksmith of Sayabec, Que., who has also kept a small store the last couple of years or so, has made a voluntary assignment.——The assignment is reported of H. Gerard, a leading general dealer at Lacolle, Que., with liabilities put at about $8,500. He has shown signs of financial strain for some time past.——A. Hunter, general store, Brome Corner, Que., recently reported embarrassed, is arranging a settlement at 25 cents, cash.

THE Seaforth private banking firm of Logan & Co. is in difficulty after being in business about thirteen years. Mr. Robert Logan, the sole proprietor, has assigned. Immediately following this failure was the announcement of the assignment of the Glenboro, Man., branch. For some time it has had a hard struggle for existence owing to a heavy hailstorm that swept through that district a year ago and rendered many of the farmers unable to meet their obligations. Mr. Logan had been in business since 1878 in the North-West, and gradually reducing his liabilities, enjoyed the confidence of his creditors. His Winnipeg bankers are said to have a claim of nearly $30,000, secured by customers' paper, and in addition to this the Stratford branch of the same bank has security on his house and lot, which cost $7,000. The assignee outlines the standing of the Seaforth branch as follows: Notes in the hands of his banker, $17,987; other notes, $2,000; Wilson farm, $5,000; house and lot, $4,500; other assets, $3,938, making a total of $32,425. The liabilities are $28,929. The full position of his affairs in Manitoba has not yet been ascertained.

THE SITUATION.

A rise in the price of wheat such as has recently taken place, when the harvest has been just gathered, is founded on the belief of a comparatively short crop. But it is too soon to get a clear view of the facts on which price must finally rest. There is a short crop in France; but even there the old story of an artificial forcing up of the price is heard. Other countries suffer from a shortage. Under an artificial state of things, it used to be a maxim in Europe that years of agricultural abundance were apt to be years of suffering to the toiling masses. If the world's crop of wheat is relatively deficient, and Canada's harvest is relatively abundant, as they seem to be, a year of plenty with us ought to be and must be a year of prosperity, caused by the double gain in the yield of the harvest and in the increase of the price. For the price to reach the dollar mark, even for a day or two, in August, has in recent years been unusual. The start is a good one, but the price is not to be set till there is a better knowledge of the relation of the year's supply to the demand. In any case the low prices of wheat which have ruled for some years are not likely to recur during the present year. If Manitoba has produced, as some claim, 22,000,000 bushels, the Province will, at the prices likely to rule, feel keenly the thrill of prosperity; commerce will feel the benefit of the reaction, and an extension of settlements will be promoted.

An agreement between the Government of Canada and that of the United States for improved mail service to Klondike is said to have been concluded. The change will be from a monthly to a semi-monthly mail. Canada is to perform the service, and the United States will contribute its share of the expense. Dyea, which is 100 miles above Juneau on the Lynn Canal, at one end, and Dawson at the other, will be made international exchange offices. This does not indicate that Dyea will prove to be on the international border line; its selection is evidently the dictate of convenience. On the Pacific coast line there is here a strip of American territory, the limitations of which are found in the Anglo-Russian treaty of 1825, the United States having acquired the Alaskan territory according to these limitations. The American strip is to go as far as a chain of mountains, or, as a practical alternative, a distance of thirty miles from the coast. Over this strip of territory, whatever it may be, all who take this route to the Klondike mines have to pass, the distance to be traversed overland—it is really for the most part a water route—from the end of the Lynn Canal to Dawson. The American Government was willing to perform the service and have Canada account for its share of the expense; but as Canada's part of the territory to be traversed is much the more extensive, the arrangement made seems more in accordance with the nature of things.

In the unsettled state of the frontier between the Alaskan strip on the Pacific and Canada, it is to be hoped that no customs complications will arise. Report says that a Canadian customs house is being established on the Portage at the foot of Lake Bennet, which is well within British territory, officers having been sent there for that purpose. The American Government, on its part, is said to have given orders to establish a port of entry at Dyea. These movements are matters of course, and there is nothing about them which should lead to difficulty or complication. Something in the nature of a bonding system over the American frontier strip may be necessary, and for this it ought not to be difficult to provide, if it has not been already done. Meanwhile the somewhat indefinite announcement is made that a surveying party will start from Victoria, near the end of next month, to survey a route for a railway on Canadian soil, leading towards the interior.

Sir George Scott Robertson, known as the defender of the Chitral Pass, makes clear the present situation in India, when he points out that there is no rebellion of any native India tribe, the Afridis and the Swats being independent tribes, over whom Great Britain does not even exercise a protectorate. The fact is that the hostile movement which British authority has to encounter, on the India frontier, is an irregular invasion by tribes from Afghanistan. The Ameer disavows their acts; but his good faith is doubted by the Government of India, whose policy would be to make war upon him before he has time to make formidable preparations for attack or defence. There has, at times, been reason to believe that he was unfaithful to Great Britain, whose gold he regularly receives; and though it has never been revealed that he is also in the pay of Russia, he once wrote in a tone that might well induce the belief in suspicious minds that he was prepared to go so far as to prefer Russia to England. The Afridis, subjects of the Ameer, who are paid by Great Britain to keep open the Kyber Pass, have been unfaithful to their trust and made irregular war on British India. Something more is due from the Ameer than to disclaim the turbulent acts of his subjects; he is bound to hold them in check in future, otherwise he must accept the responsibility of their wrong-doing.

That the border war in India is of fanatical origin is the belief of Sir George Scott Robertson. It has probably received its chief impulse from the notion that the Turk has won in Thessaly, because Heaven fought on his side. This feeling, when it exists, is capable of receiving a political direction; and when surmise credits the Turk with being the remote cause of the outburst, the Turkish Government takes the trouble to deny the statement that it intrigued with the Ameer to promote a religious war in British India. This does not, however, prove that the Turk had no part in stimulating the passions to which the outbreak is due. To the Mahomedan tribes man the triumphant march of the Turk in Thessaly is a conquest over Christians; whether they be Greeks or British is to them indifferent. The policy of Russia has, for some time, been to keep on good terms with Mahomedan subjects of the Turk; and it has been relentlessly carried out in Armenia, at the expense of the Christians. Through the violent but futile denunciations of the Turk by writers like Gladstone, Great Britain has been made to appear to the Mahomedan world just what Russia would like to have her appear. While England checks Turkey in Thessaly, the Turk is likely to use that subtle influence with the Mahomedans on the Indian border to cause trouble to British arms. That Great Britain will come out of this trouble practically uninjured, is probable; that it should be so is the ardent wish of the best elements of civilization. The fact that the Kyber Pass is in the hands of the enemy shows that Great Britain has a serious task before her in restoring peace.

After the visit of Emperor William to the land of the Czar, comes that of President Faure of the French Republic. When the alliance between France and Russia was first announced it was a joy which the French people had all to themselves; but when, as time rolled on, it had to be shared with Germany, the exalted enthusiasm which accompanied the first embrace suffered a slight chill, which no efforts could conceal. It would never do for the Czar to invite the Emperor William to visit him unless a similar distinction was to be granted to the head of the French Republic; and so M. Faure follows the Emperor of Germany at no great distance. It would have been inconvenient to have them both together. It imports other nations to reflect on what general understanding, if any, which may be come to by the three powers; British subjects are specially concerned to know whether it has any, or, if so, what significance for Great Britain. If we may believe current reports, the Emperor of Germany's aim was to give an anti-British complexion to the understanding which he desired to make with his royal brother. What new arrangement will be made between France and Russia, if any, we must wait to learn; and as such agreements are oftener secret than open, we may have to wait till some incident, like the recent Bismarkian, brings the revelation.

FINANCIAL REVIEW.

The attention of the people of Canada is now being turned to the crops of grain that will soon be harvested, and which present in so many localities such a remarkable appearance of promise. The yields of wheat in many counties of Ontario are such as to remind one of the old times of abundant harvests and high prices, for there is at present not only an abundant harvest generally, but an extraordinary recovery from the low prices that have prevailed with such a depressing effect during the last three or four years. The crops in Manitoba and the North-West are fully up to the average in quantity, but the quality will be determined largely by the weather of the next few weeks. Rain, hail or frost may yet do damage to a very unpleasant extent, and diminish the average quality by ten or twenty per cent. and the value of the whole crop correspondingly. The estimate of the wheat production of the North-West is about twenty-five millions, and if it is harvested in good condition and the average quality is high, the return to the producer in dollars may be nearly fifty per cent. more than was secured for the crop of last year.

In Ontario, where the harvest has generally been secured and its quality assured, if prices maintain their present high level or thereabouts, the value of the crop may be valued at even double that of the crop of last year. This cannot fail to do much towards lifting up the business of the province from the depression which has clouded it over so seriously during the last few years. Its effect will no doubt be to put numbers of storekeepers in a good position who have for sometime been in the doubtful category, and to bring many debts that appeared to be drifting towards a loss into a sound position again. The effect of all this upon the various branches of the wholesale trade can hardly be estimated. It is notorious that the losses of wholesale merchants for several years back have been on an unusually large scale; so much so indeed that a feeling almost akin to hopelessness was beginning to prevail in certain branches.

Now, however, a different atmosphere will begin to be breathed, and, as when the tide begins to turn, it often flows on with increasing steadiness and volume for years, a return of prosperity in these branches of trade may reasonably be looked for. And it must be remembered that one interest affects another. Interests affect one another adversely, and they will affect one another prosperously, so that a general revival may possibly set in and an era of prosperity begin of a brighter character than many have supposed possible.

However, we know well how unsafe it is to prophesy. And we are not prophesying; all that we have said has been in the way of suggestion of what may come if certain contingencies work favorably. But then they may not work favorably, and our suggestions of what is possible may turn out to be mistakes. And there is one cloud, and not a little one, impending over one of the large industries of the country, viz., the sawed lumber trade with the United States. The prosperity of certain districts of Ontario (not counting the Ottawa Valley) is largely dependent upon this industry, and until the price rises in the States to such a point that the Canadian producer can export to a profit, the cloud over this industry will continue.

Against this, of course, has to be set off the fact of exceedingly good prices realized for our wood exports to England. The effect of these abundant crops and high prices upon the business of the banks will, undoubtedly, be to largely increase the circulation of their notes over former years. We may expect this year a very much larger outflow of bank notes for the purpose of moving the crops than has been the case for several years back. It is very possible that over the whole Dominion, it may take fifty per cent. more money to handle the crop, and that instead of an overflow and increase of some five millions, circulation may increase to the extent of eight or ten millions. All this will be very satisfactory in view of our admirable circulating system. With respect to this, we do not need to enlarge, except to say that if certain circulating arrangements once contemplated had been carried into effect, a very severe stringency of money would have set in by this time, to the great embarrassment of all parties engaged in trade.

The deposits of the banks and of the country generally are still expanding, and now touch very nearly three hundred millions, a point which would have been deemed absolutely incredible a few years ago. There was once a time when deposits were held to be of little account in the general banking position, they were so small. Now they aggregate such an amount as to supply the whole of the funds that the banks require for discounting and loaning.

With regard to this latter matter, some rather striking changes have been going on during the last year or two. In many of the banks a very large reduction has taken place in the discounts and loans, with a corresponding increase in the investments of the bank in bonds and other interest-bearing securities. But these are yielding less and less of a net return of interest, and it is obviously not a profitable business to exchange loans and discounts bearing 6 per cent. for bonds and debentures bearing 3½ to 4 per cent. The managers of our banking institutions are wise in strengthening the position of their respective banks as much as possible. And these investments, though not profitable, are undoubtedly safe. But after all, the purpose for which charters were granted to banks was to further the mercantile business of the country. And while it is quite probable that the legitimate wants of mercantile customers have been well attended to so far, it certainly would be most undesirable for mercantile loans to be called in and mercantile enterprises restricted in order that the funds of banks might be invested in bonds and debentures.

However, if the revival of business takes place, which we have been shadowing forth as a possible contingency, there may be such a demand for funds for mercantile purposes as will entirely reverse the process which has been going on for several years back, and this will make banking more generally profitable.

ABSTRACT OF BANK RETURNS.

CANADIAN TRADE RELATIONS WITH THE UNITED STATES.

That the unfriendly attitude assumed by the present Government of the United States towards Canada in regard to trade matters is inspired by political motives becomes apparent in the absence of economic reasons to justify it. During the summer months representatives from the several South American republics have been entertained in the large cities of the United States, and every effort made to impress them with the commercial importance of the country, with the object of developing foreign trade. The entire purchases of the merchants in all the South American countries in the United States last year amounted to $33,000,000 in value, while during the same year Canadians bought goods in the United States, according to Congressional statistics, valued at $66,000,000. The New York *Journal of Commerce and Commercial Bulletin*, commenting upon the distribution of the exports of the United States, says: "We not only refuse to make any trade concessions to Canada, but we single out Canadian products that never could or would come in here extensively enough to hurt our own producers, and impose what are designed to be prohibitory duties on them; we try to cut their transportation routes entirely out of our business, and finally we resort to laws designed only to irritate the Canadians, such as making it a crime to employ on the American side of the line anyone who lives on the Canadian side. And yet Canada is as good a customer of ours as all South America put together, and we pretend to be extremely anxious to develop our trade with South America."

In the international exchange of products between Canada and the United States the balance of trade rests with the latter country, and the tendency of the trade of the past two years has been towards an increase of Canadian imports from the United States and decreased exports. During the eight months ending 28th February, according to the statistics of the United States Treasury Department, the imports from Canada into the United States amounted to $24,482,438, or $3,544,878 less than the same period the previous year, while the exports from the United States to Canada within this period amounted to a value of $42,348,351, an increase of $3,282,337 over the same eight months in 1896. By the ordinary process of reasoning Canada should be a much valued customer of the United States, her purchases from that country exceeding by 72 per cent. her exports within that period. Canadians might, in view of these statistics, reasonably expect trade concessions from Congress, but instead of giving any advantages to the commerce of this country, the Federal legislature under the present administration has seemingly taken every opportunity to injure Canadian trade interests. The principles upon which international trade rests are, in the main, not unlike those which underlie the trade between individuals. Trade begets trade, and if we are compelled to look abroad for markets in which to sell our products, then we must in the same country make our purchases.

The motto "Manufacture Here, Sell Everywhere," has been accepted in good faith by several prominent newspapers in the United States as representing the policy which should guide the commercial interests of a great nation. This is the spirit which apparently dominates the Republican Administration at Washington. If the canons of political economy as laid down by Adam Smith and the economists be false, then the United States may succeed in carrying out the maxim which it has adopted. But the principle that a degree of reciprocity is necessary to constitute a successful international trade, has a deeper authority than the writings of economists. It is based upon the experiences of centuries of trade history. The almost unanimous decision of the prominent lumbermen of Ontario, at the meeting to which we made reference in our last issue, to recommend restricted exports of Canadian logs, is an indication of the results that are likely to follow the adoption of a policy which seeks to monopolize trade, giving nothing in return.

THE MASSACHUSETTS BENEFIT LIFE ASSOCIATION.

This boastful assessment association, which was deemed strong enough to re-insure our great Canadian Mutual Aid, only a few years ago, is now no more. John Henry Rolker, its recently-elected president, announces to the 30,000 dismayed certificate-holders, under date of August 17th, that it has suspended business. The reason given is "the very limited response of the members to the calls levied under date of July 1st." And of same date comes a circular from "a committee on Re-insurance, appointed August 10th," recommending all policy-holders (as they call the holders of those now worthless assessment certificates) to apply to a certain old-line insurance company, of New York city, for reliable insurance, and to "make early arrangements to be examined by one of the company's physicians." And the committee significantly add, "it was found impossible to induce any reliable institution to assume the whole membership without medical re-examination."

There's the rub. Only those now in good health, and with no parents or uncles or aunts, or brothers or sisters gone with consumption, can be re-insured; and even these can only be accepted at the rates due to "their present age." There were 46,399 members on the first of January last, and these are said to have dwindled, in six months, to about 30,000 by reason of the heavy death calls, and it is fair to presume that about one-third of these will be found uninsurable lives, and that another third will think twice before they will place any further confidence in the men who have victimized them, and that only a few thousands will accept of re-insurance at such a heavy increase of rate as is proposed.

And now, what is to be done for the thousands of widows and orphans of those who have died since the 1st of January last, or who will die before the winding-up proceedings are concluded, or who will be rejected if they apply for re-insurance? To insure men at rates due to their present age, on their paying those rates out of their own pockets, is to do practically nothing. That operation will cost the society nothing. Every such member is at liberty to go where he pleases for his insurance, and no money is to be given back to him. And this for the very good reason that there are no funds but what are required, and many thousands of dollars more, to pay the piled-up death claims of months ago.

Fortunately for the claimants by death in Canada, there is a deposit of $100,000 at Ottawa that will, after a time, be applicable with interest, to such of them as have already been bereaved. Justice McMahon has issued an order, placing the Canadian branch of the society's business in a receiver's hands for prompt liquidation. But whether certificate holders whose deaths happen hereafter, or who are now uninsurable, will get any portion of the deposit, remains to be seen. In a life insurance company proper they would be protected to the extent of their percentage of the reserve. That is what a reserve is for. But we doubt if, in an assessment society, any consideration whatever can be paid to any claims but those which have become such while the certificates were in full force by payment of all assessments called. No assessments are usually made, or paid in, or held, by an assessment society, for the benefit of people where "death while in good standing" has not occurred.

Hundreds of assessment societies have been wound up during the past ten or fifteen years, without making much commotion, or even putting other people on their guard against such fair-weather craft, utterly unable to stand the first brush of a storm. But this society stood on a high level of superiority over even such as the well-known Mutual Reserve Fund of New York, and Dr. Oronhyatekha's I.O.F., and had nearly as many members, and a handsome mortuary fund, similar to theirs. On December 31st, 1896, it was credited with $1,838,886 of assets and 46,399 members. That is nearly $40 per member. The New York concern had not quite $50 per member on that date, and the Big Chief is supposed to have stored up in his leafy forestric pocket somewhere about $20 per member.

Here is the fallen society's record of membership and cost of insurance for the past twelve years. Notice how the society flourished and grew, up to a recent date. Those other large concerns, the Mutual Reserve, the I.O.F., the A.O.U.W., the Royal Arcanum, the Maccabees and others are now flourishing, in a similar butterfly atmosphere, with no proper reserve behind them for the evil day so surely coming upon them. We quote from our issue of June 25th last:

	Year.	No. of Members.	Cost per $1,000.	Year.	No. of Members.	Cost per $1 000.

THE WHEAT CROPS.

The remarkable strength shown in the wheat market within the past few weeks gives promise of improved industrial conditions in Canada. Although the market is subject to fluctuations, and prices may be expected to decline as well as advance, in the changing conditions of a speculative market, there is reason to believe that the wheat harvests of 1897 will be marketed with greater profit to growers than for some years past. The advance in values is based on the existence of small visible supplies and the probability of short crops in Europe. The visible supply of grain in the United States and Canada for the week ending August 23, 1897, in comparison with stocks at similar periods the two previous years, is as follows:

VISIBLE SUPPLY.

August 23, 1897..............................	16,729,000	bushels
August 24, 1896..............................	45,189,000	"
August 26, 1895..............................	35,088,000	"

The shortage in present available wheat supplies in the two great agricultural countries of North America, amounting to 28,450,000 bushels, as compared with 1896, and 18,359.000 bushels as against the supplies in 1895, although considerable, would not alone, in view of the approaching harvests, be sufficient to cause material permanent appreciation in prices. The wheat on passage to the United Kingdom and the Continent, August 24, is reported at 16,240,000 bushels, as against 17,280,000 bushels the same week, 1896, and 28,320,000 bushels the same week, 1895.

The total growing crops of Europe are estimated by competent and conservative authorities to yield 158,500,000 quarters, as compared with 189,725,000 bushels the preceding year. At a consumption of 206,000,000 quarters, which is believed to be a moderate estimate of European requirements for the coming year, there is a deficiency of 47,500,000 quarters, or 380,000,000 bushels. The average European consumption during the past seven years has been 1,624,000,000 bushels, while the average crop for the same period has been 1,405,000,000 bushels, making the average deficiency for the seven years 219,000,000 bushels.

The principal exporting countries outside of Europe, United States, Argentina, India, Australia, and Canada, must be called upon for more than the usual supplies. The estimates of the 1897 crop in the United States range all the way from 450 million to 600 million bushels.

The generally accepted commercial estimate of the wheat crops seems to be 550,000,000 bushels, though figures on the average value of a condition of "100" for 10 years the Government crop report for August indicates a crop of only 450,322,000 bushels. According to an estimate by the Cincinnati *Price Current* the home requirements for the current year may be regarded as approximately 365,000,000 bushels of wheat, for food, seed and other purposes. If, therefore, the spring and winter crops amount to 550,000,000 bushels, the United States will be able to supply 185,000.000 of the 380,000,000 European deficiency. India, it is estimated, cannot contribute more than 8,000,000 bushels, and from the west coast of South America, Asia Minor, and Northern Africa it is not expected more than 16,000,000 bushels of wheat will be received. Australia and Argentina cannot be counted on for their possible 24,000,000 bushels until after the new year has opened.

The crop prospects in Canada are, on the whole, excellent. From a number of districts discouraging reports have been received, but in the main the harvests of the two chief wheat-growing provinces, Ontario and Manitoba, promise to be abundant. The Ontario Government bulletin makes an estimate of 24,268,158 bushels of autumn, based on the very high average yield of 25.5 bushels, as compared with 15,078,441 bushels, and an average of 17.2 bushels per acre a year ago. A significant feature of the report is the increased crop of spring wheat, which amounting in 1896 to 3,519,322 bushels, has increased to 5,480,821 bushels the present year. The reports from different parts of Manitoba and the North-West Territories vary, in some districts correspondents estimating 15 bushels per acre, others 18 to 20 bushels, and so on, until 40 bushels has been given as the probable yield in some districts. The official estimate of the Government places the average yield, per acre, at 16.49 bushels, with a total crop of 21,284,274 bushels. This is thought by some authorities to be too low, and men who are usually conservative have placed the yield at even 25 million bushels.

NEW CAUSES OF FIRE.

A violent thunderstorm, or a succession of such storms, accompanied by loss of life or property, is sure to attract attention to the dangers of fire from such causes. And it may also cause some people to think for a minute or two of the risks of electric light or power-using—for such risks are very real. It is the part of wisdom to reduce these dangers to a minimum by taking necessary precaution. And not the least among such precautions is the having one's house or factory properly wired for either light or power, and the necessary safeguards placed for lightning discharge or the like. Some of the freaks of lightning are very curious. Not only will it "burn out" a motor on a street car, as it did in a dozen instances last Sunday, but it will interrupt a church choir, as was done during the same storm, by disabling the electric motor of the organ.

The telegraph people can easily furnish a score of cases which illustrate the ever-present danger of fire from lightning discharge, and the power of a lightning flash. Two years since, or three, a "cross" of the telegraph wire with our electric light wire at Yorkville, near Toronto, during a storm, caused the burning of the telegraph office at Aurora, thirty miles away. And the Niagara, Ont., telegraph office was destroyed by fire more recently, the cause being contact of an electric road wire with the telegraph wire on the American side of the river. Still later, Mr. Townsend, the well-known Grand Trunk electrician, tells us of an occurrence at Berlin, Ont., just the other day. On the inside wall of a house were two small wires, covered with a coating of wax and cotton for insulation, and placed in grooves of a board such as telephone and telegraph constructors use. Within an inch and a half of these wires was a gas pipe. Lightning came along the wires into the house, burning off the insulating material, jumped from them across to the gas pipe, and set fire to the house.

Very interesting as well as important are the quarterly reports made by the Electrical Bureau to the National Board of Fire Underwriters in the United States. Novel and suggestive facts with respect to the causes of fires are constantly coming to the surface and proving to us that truth furnishes as strange things as imagination or fiction in the novel conditions of to-day. Who, for instance, but an electrician or a telegrapher would have dreamed of such a cause of fire as dripping water falling on an electric instrument, thereby causing what electricians know as "a short circuit" in a basement?

How many householders are aware that a fire would be likely to arise from such circumstances as the following? An electric wire, properly insulated, lay upon a gas pipe in the interior of a dwelling; rats gnawed the insulating material off the wire, and an arc was established between the wire and the gas pipe, setting fire to the pipe. There are several more instances given, of a character which should serve as warnings to those who use electric lights in house or store. It is related that sparks from arc lamps in a department store set fire to cloaks on a table underneath. This is not an unusual sort of thing. Again, a portable incandescent lamp was allowed to remain lighted lying on a mattress. The heat from the lamp ignited the cloth and the excelsior wood shavings of the mattress, and the fire spread through the basement of the store. More unexpected, probably, is the following: An electric pressing iron was allowed to stand with the current turned on. The heated iron after a time set fire to the table, and the flames communicated to the surrounding combustible material. Take another case, which is a type of several accidents happening in an unlooked-for way: A carpenter dropped a nut on the coils of a rheostat, or resistance coil, short-circuiting them with an iron frame resting against a gas pipe. An arc was formed between the frame and the pipe; the latter was melted by the electric current, and the escaping gas ignited.

So rapid has been the recent progress of electrical science and so quickly has electric currents for power and lighting purposes been taken up by the public, that people have scarcely had time to become acquainted with the nature of the element that they have suddenly grown so familiar with. It is needful, however, to know, from such instances as the above, that, as an experienced man puts it, "electricity is not to be fooled with ; we don't know enough about it yet." And it is comparatively easy to take precautions against electrical fires when people have learned that a necessity for such care exists.

PROTECTION INDEED.

It appears that the doses of protection now being administered to the American people under the Dingley tariff, enacted the other day, are stiff indeed. An officer of the United States Government, who has had to do with the framing of all tariffs in that country since 1875, has been engaged in making a comparison of the present tariff law with the Wilson Act, authorized by Congress not long before. The comparison is made in rates expressed in ad valorem terms between the present law and the Wilson law. The statement places the average duty rate under the new law at 54.66 per cent. ad valorem, as against an average of 40.10 under the Wilson law, the averages being figured upon the basis of values in 1896.

Increases in percentage of duty under the Dingley over the Wilson tariff are stated as under :

	Wilson bill.		Dingley bill.	
Chemicals. raised from	28 53	p.c. to	30.67	p.c.
Wools and woolens	47.62	"	86.54	"
Silks	49.96	"	53.41	"
Earthen and glassware	35.00	"	52.47	"
Metals	38.11	"	49.24	"
Sugars	40.91	"	74.16	"
Tobacco	109.06	"	121.90	"
Agricultural products	22.44	"	38.42	"
Spirits	61.54	"	68.30	"
Cotton manufactures	42.75	"	52.33	"

Calculations are then made as to what amount of extra revenue will be raised by the new duties. But these calculations are based upon the supposition that the volume and value of goods imported will be the same in 1897-98 as it was in 1896-97. It by no means follows, however, that an equal volume will be imported ; the experience has been that excessively high tariffs tend on the one hand to increase smuggling, and on the other to lessen the purchases of the foreign goods so taxed. According to the Government officials, some of the increases expected in revenue are as follows : Chemicals, from $5,619,239 to $8,423,084; earthenware and glassware, from $8,006,839 to $12,303,148 ; metals, from $13,196,416 to $17,487,482 ; wools, from $605,749 to $2,439,536; sugars, from $29,910,703 to $54,207,642; agricultural products. from $7,727,614 to $14,587,601. Thus the increase hoped for in these six items is $44,390,000, or about 40½ per cent.

A PLEA FOR WATERWORKS AND SEWERAGE.

For several recent issues, and possibly for a longer time, the Summerside, Prince Edward Island *Journal* has been educating the residents of that pretty town to the advantages of waterworks and a system of sewerage. What it says on the subject may be taken to heart by some scores of other places in Canada. The argument is that the health, the domestic convenience, and the comfort of the people would be promoted by the introduction of water works and sewerage, whether undertaken by the town or awarded to a company for a term of years. It would result in a decrease in the rates of fire insurance ; the enhanced value of all property in the town, the keeping of the streets clean, and sprinkled in the dusty season, at a much less cost than now; the attraction of new residents to the town, and the keeping at home of people who are now thinking of leaving; the improved hygienic conditions and the better health of the people; the added attractiveness and cleanliness of the town; the additional work it would give our own people during the process of construction. These and many others, are indisputable arguments, which might all be elaborated at length, in favor of the speedy introduction of a copious supply of pure water, which would make the town sweet and healthy, and worth living in."

THE BRITISH ASSOCIATION LECTURES.

It was stated by the chairman of the meeting at Massey Hall, on Friday night last, that the electrical experiments in the reduction of metals, so successfully carried out by the lecturer of that evening, had never before been attempted in any country on the same scale. This means, we assume, that the melting of the precious metals by means of an electric current of high intensity has hitherto been done in private or college laboratories. We know that aluminum has for several years been produced for commercial purposes (notably in Switzerland and in Cleveland, Ohio), by means of the electric furnace, and on a large scale. But this process of reduction is not yet generally employed for gold and silver.

It is no small compliment to Canada, therefore, and indeed it is no ordinary event, that such examples of recent progress in metallurgical processes should be demonstrated in a Canadian city and before an assemblage of savants of the first rank. Nothing more striking has found place in the programme of the British Association at its Toronto meeting than this lecture of Mr. Roberts-Austen upon the metals of Canada, and the chemical and electrical experiments which accompanied it. So complete and successful were they, so perfect the arrangements of the skilled men who assisted the lecturer, that even the princes among physicists were surprised at the rapidity and precision of the results achieved before their eyes, while the less-instructed public were dazzled by the mysterious beauty of the spectacle.

One scarcely knows which to admire the most : the glowing appreciation shown by the lecturer of the metallic wealth of Canada, his mastery of the subject in theory and practice, or the tact with which he compelled interest in his lecture by means of the maps and the ingenious experiments by which it was accompanied. Canada owes much to Mr. Roberts-Austen for his services on this occasion, for his utterances—now glowing with encouragement, now laden with warning—were of value in drawing the interest of strangers to our metal fields not less than inculcating prudence among Canadian investors.

THE BANKERS OF THE UNITED STATES IN CONVENTION.

The annual convention of the American Bankers' Association was held at Detroit, August 17th and the two following days. The proceedings were of considerable interest, but lack of space prevents more than an outline of the papers read at the convention and the discussions which followed. The president, Mr. Robert J. Lowery, was optimistic in regard to the industrial outlook in the United States, but wisely deprecated any attempts on the part of leaders in commerce to bring about a sudden transformation from depression to extreme commercial activity. "No one will deny," said Mr. Lowery, "that our country, for the last several years, has been passing through the deep waters of depression.

This we all know and fully realize, yet while we hope and feel that we are now where the bottom can be touched, and while we earnestly wish to reach the shore of prosperity, we want that prosperity to be based on the sound foundation of confidence. We want nothing sporadic, nothing sectional, no prosperity of a class, but general prosperity, prosperity not only for the banker, the merchant, the manufacturer, the farmer, the mechanic and the laborer; in a word, we want prosperity which will reach out and touch every section, industry and business in this great country." The president in his address advocated the uniformity of commercial and financial laws, the retirement of Government legal tender paper and the spread of sound currency literature among the voters of the United States.

At the first annual meeting of the Trust Company Section of the American Bankers' Association, it was shown that complete returns place the capital stock of the trust companies in the United States at $224,606,000. The Hon. James H. Eckels, Comptroller of the Currency, gave an address before the section. An interesting part of Mr. Eckels' paper was devoted to a definition of the proper functions of the commercial banker. The Comptroller maintained that "the criticism which may justly be passed upon commercial bankers in this country is not that they have not observed a fiduciary relation in the great majority of instances, but because, in the anxiety to declare dividends upon capital invested, there has been a wide departure from doing a commercial business. The line to be drawn in the extension of credit is not hard of ascertainment. A bank dealing with commercial deposits should confine its granting of credits to strictly commercial undertakings. It has no right to take commercial deposits, payable upon demand, if it pursue a different policy. Fixed loans and fixed investments are the province of trust companies and savings institutions, and not the field to be entered upon by a commercial bank handling commercial deposits, essential to the proper conduct of daily commercial business. I am confident that if this line of demarcation was drawn, instead of there being many bank failures because of an accumulation of unconvertible assets, there would be few, and then largely through criminal dishonesties."

After an able description of the evils of the present currency situation, Mr. Eckels concluded that "complete confidence cannot be restored by increasing the governmental income, but even if it could there would be no guarantee against future impairment of it through the same cause. That danger can only be eliminated by rendering it impossible to have the Treasury the one source of gold supply for the people of every nation. It is not sufficient to have our currency good to-day, but an earnest must be given that it will be good to-morrow and throughout the future. That promise cannot be accepted unless legislative action once for all established beyond the peradventure of a doubt that ours is a gold standard country with laws establishing the fact so plain 'that he who runs may read,' and with a Treasury so equipped and resourceful as to be unmoved no matter how strongly assaulted. It will not be fully credited as long as it is but the policy of an executive officer, and not the uncontradicted expression of statutory law."

Among the important papers read at the meeting were these: "What Legislation is Needed in Respect to the Currency," by N. B. VanSlyke, Madison, Wis.; "The Savings Bank," by M. T. Herrick, Cleveland, Ohio; "Organized Capital," by H. J. Hollister, of Grand Rapids, Mich.; "Are Clearing Houses for Country Checks Practicable," by Bradford Rhodes, Mamaroneck, N.Y. Mr. William C. Cornwall, of Buffalo, who is well known to Canadian bankers, in an interesting paper discussed "Would Branch Banks in the United States be Beneficial or the Reverse." As was to be expected from Mr. Cornwall's acquaintance with banking in this country, frequent reference was made to the banking system of Canada. The paper was distinctly in favor of the introduction of branch banking into the United States. The only real objection to be urged was based upon political grounds. "Perhaps the argument in favor," said Mr. Cornwall, "may be summed up when we say the system reaches the highest perfection in three important particulars—stability, economy, usefulness. Stability, the greatest financial strength; holding up all our institutions in active periods and in storm, and attracting to this country the capital of the world. Economy, both of capital and management, meaning the lowest cost to the business world, and consequently the highest development of our resources. Usefulness, developing, and with most perfect machinery, the resources of every part of the country, and bringing into greatest activity the capacities of brain and muscle of all our people."

In their circular of August 14th, the Hills Bros. Co. say of the currant situation: "The crop is now being gathered in Greece, and the several shippers are sending forward their estimates of the outturn varying from 145,000 to 155,000 tons. The quality is said to be somewhat better than the previous crop."

THE MUTUAL RESERVE FUND.

From far away Halifax comes a brochure with the name of W. J. Murray on the title page, defending the above society from the "attacks" and "misleading articles" of THE MONETARY TIMES. Mr. Murray seems to be an interested party, being "Manager Maritime Provinces of Canada," and, therefore, scarcely capable of taking a dispassionate view of the Mutual Reserve Fund's performances at Hamilton, in endeavoring to compromise three different large claims for a mere bagatelle. Mr. Murray prints a fulsome letter which th society succeeded in inducing Prof. O'Brien's widow to sign, after she had got her $5,000 in full. But he carefully conceals the truth as to the way in which that letter was manufactured, and as to the two other cases in which compromise was attempted, but failed. The following quotation from Mrs. Gowland's statement, published in full in our columns of July 30th, will probably throw some light on this matter: "Shortly afterwards, an adjuster came to Hamilton and made repeated attempts to compromise the policy for half its amount; but on the advice of my solicitor, this was refused and payment in full demanded. Not long after this, an article in THE MONETARY TIMES showing up the compromising of the Mrs. O'Brien claim gave such publicity to these cases that it appears that the company changed their minds and decided to pay the claim in full; but the fact remains that the company *did* attempt to compromise this claim with me, and it was not until public exposure of the other case took place that they decided to pay me in full. To further illustrate the method of dealing with beneficiaries employed by this company, I may add that an elaborate and lengthy letter of profuse and grateful acknowledgment was carefully drawn up and brought to me by the agent for my signature; but as I knew of no reason for expressing special thanks for the manner in which I had been treated, I refused to sign it. In view of all the facts, I must say that I have very little confidence in any company that would treat a widow in the way the Mutual Reserve attempted to treat me, and if my advice were asked it should certainly be—keep out of any concern which deals in such sharp practices as the Mutual Reserve Fund Life Association appears to do."

THE PRICE OF LEATHER.

During the past year the difference between the prices of hides and leather has been held by tanners to be a serious discrimination against their product. Hides have recently appreciated still further in price, and the only safeguard of the manufacturers of leather lies in a general advance in the price of this commodity. Tanners are not looking for a sudden and unexpected increase in prices based upon the advance in raw material, for any rise in values of this nature must be lost in the event of a fall in the price of hides. So subject is the hide market to speculative influences, that it would be the cause of great evil to the industry if leather were to follow it in all its various fluctuations. A gradual advance is likely to be more permanent, and, since improved industrial conditions in the country must inevitably lead to a better consumptive demand, there is every indication that this will be realized. The Old Country markets are giving satisfactory results. Stocks in Canada, of shoes, harness, belting, leather and hides are not excessive, and all that is required to place the trade on a satisfactory basis is the firm determination of tanners to realize a working profit on every side of leather that leaves the warehouse. The Lang Tanning Company, Limited, Berlin, in an effort to inspire the trade with confidence, have sent out the following circular letter: "During the past ten weeks hide prices have advanced more or less every week, and have now reached such high figures, which are likely to be maintained if not increased through the scarcity of hides in our country, as well as in the United States and Europe, that it is no longer possible for us to supply leather at old rates. An advance in prices is not only justifiable, but imperative, in order to protect ourselves against direct loss. In view of the above facts, we have been obliged to withdraw our quotations for the meantime, but which will in future be furnished on application. It will be our aim to supply the trade promptly, at lowest possible prices, and with standard quality of leather, as in the past." Combination in the black leather industry is impossible, even if it were desirable, but the same results can be accomplished by each tanner taking the firm independent stand which is outlined in the above letter.

CAN CHEESE VALUES BE MAINTAINED?

There continues to be a remarkable increase in the production and shipments in the cheese industry. During the week, 31,704 boxes of cheese were boarded at 18 meetings. The movement last week was the smallest reported since the season attained nominal growth, amounting to only 19,939 boxes boarded at 17 meetings. It is interesting to note that an increase in production is also taking place in the

United States and Holland, while in the United Kingdom, the make to date in the present season is placed at 10,000 tons in excess of the same period last year. The following table compiled by Messrs. W. Weddel & Co., London, Eng., showing the British imports for the seven months ending 31st July, as compared with the same period 1896, is interesting:

Country.	1896.	1897.	Increase or Decrease.
Colonies—	cwts.	cwts.	cwts.
Australasia	54,542	67,751	+ 13,209
Canada..................	384,341	519,517	+ 135,176
Foreign Countries—			
France	27,467	18,387	− 9,080
Holland	162,394	166,740	+ 4,346
United States...........	378,098	379,779	+ 1,679
Other countries	20,462	27,623	+ 7,161
Total	1,027,304	1,179,795	+ 152,491

Out of a total increase in the imports, amounting to 152,491 cwts., Canada contributed 135,176 cwts., overshadowing all other countries by the amount of her shipments. The low prices at which cheese was sold in Great Britain in the summer months of 1896 led to a vast increase in the consumptive demand. Stocks were well sold up, and the make of the present year came on the market under good conditions. It is, however, a question whether, in view of the increased imports and home production, the markets of Great Britain can long be maintained at their peesent range of values. Prices at the country markets this week have varied from 8¾ to 10c., with an average price of about 9⅜c. per lb., or fully 1c. per pound in advance of prices at the close of August last year. Shipments from Montreal for the week ending August 21st were 88,259 boxes, as compared with 82,659 boxes the corresponding week last year. We append our usual table of transactions on the Ontario cheese boards:—

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.
Brockville	Aug. 19	..	3,903	500	9⅛-9½	......
Kingston	" 19	..	1,502	609	8¾-9	......
Chesterville......	" 19	..	1,092	278	9¼	......
Shelburne	" 20	10	1,170	150	9⅛	Sept. 3
Perth	" 20	..	600	....	..	......
South Finch	" 20	..	1,207	111	9¼	......
Listowel	" 20	20	4,471	4,000	9¼-9⅜	......
London	" 21	27	4,826	425	9⅛-$9\frac{5}{16}$	......

EXPORTING BUTTER.

There has been considerable development in the Canadian butter trade since the beginning of the year. During the seven months ending July 31st, 17,788 cwts. of Canadian butter were exported to the United Kingdom, as against 6,918 cwts. in the same period a year ago, an increase of 10,870 cwts. in a period which is ordinarily a poor season for the Canadian butter exporter. September, October and November usually show the best results in the butter trade, and during these months it is reasonable to expect a still larger movement in the butter industry. A London, Eng., advice dated Aug. 13th, says:—"There is no market for Australian and New Zealand butter, the only colonial product on hand being Canadian, which is arriving in fairly large quantities, though the last week or two imports have somewhat declined in quantity. The quality, however, is very good, and the butter is finding favor with buyers. The drought which has affected Australia for the last two seasons appears to have quite passed away, and latest advices speak of earlier shipments from New South Wales than last season, though from Victoria it is expected supplies will be later. It is too soon, however, to speak very definitely upon this point as well as to the quantity likely to come forward. If the Australian winter be severe very large numbers of cows must die, while those that struggle through will be so poor in condition that it will take a long time before they give full yields of milk. Thus the amount of the next season's imports of Australian butter depends very much on the character of the winter they are now experiencing." Although Canada is obtaining an increased share in the butter trade, it will be seen that there is room for almost indefinite expansion when it is stated that 1,933,934 cwts. of butter were imported into the United Kingdom during the seven months ending July 31st, to which amount, as we have seen, Canada contributed but 17,780 cwts.

POOR PRICES FOR CODFISH.

The staple industry of Newfoundland, the cod fisheries, is in an exceedingly depressed condition. An advice from St. John, Nfld., to the Montreal *Gazette*, says that large merchantable codfish are now quoted at $2.80 per quintal, and the inferior grades are, of course, in proportion. The demand is so slack that there is difficulty in disposing of it even at this low figure. It is possible that as the season advances the price may improve; but at present there are no signs of an increased demand, and the current price may not go beyond the figures quoted. The fall in values in Newfoundland is caused by the depression in European markets. The Newfoundland exporters have been losing ground in the markets of Spain, Portugal and Italy for the last ten years, as a result of the competition of the French-caught fish. Aided by bounties, writes the correspondent, they can afford to sell at a lower price than we. But that is not the whole truth. We have allowed ourselves to be beaten in these markets by sending fish inferior in cure to that of the French. In many instances the cure has been very bad. The French fish is cleaner, and presents a more attractive appearance; and consequently sells better. However, we must go a step farther back. Why do not Newfoundland fishermen take greater care in curing their fish and in making it attractive to purchasers? It is not from want of skill. It is owing to the supplying system on which the fisheries have been conducted. The fishermen obtain their supplies on credit at the beginning of the season, and bring in their fish as payment at the close. The supplier has to take the fish, no matter what may be the cure, otherwise he will lose his advances. As a rule, the exporting firms, in a too eager competition with each other, have been in the habit of taking over the fish without much care in "culling." The fishermen find that their fish is taken at the same price whether well or ill-cured. It is no wonder that under such a system the cure of fish has degenerated.

WHY CANADA IS AGAINST BI-METALLISM.

The latest of the pamphlets issued by the Gold Standard Defence Association, of London England, is dated 27th July. It is written by Mr. B. E. Walker, ex-president of the Canadian Bankers' Association and is entitled, "Why Canada is against Bi-Metallism."* Having stated some of the intimate commercial relations of Canada with the United States, the author tells why, although the Dominion settles the final balances of its commerce in London, her more immediate clearing city is New York. "Such being the intimate trading and financial relations between the United States and Canada, I wish to explain why Canada maintains so easily its position as a gold standard country, and why its great and wealthy neighbor, the United States, also a gold standard country, has been repeatedly threatened with the degradation of its standard from gold to silver."

Here follows a series of paragraphs showing what conditions and State enactments tended to make the American banks local in character, instead of national, and how the present Treasury system, originating largely in the necessities of the civil war period, took shape. ". . . By following the incorrect principles stated above," says Mr. Walker, "the United States Treasury now stands deeply involved." The issues for the redemption of which in gold the Government is directly or indirectly responsible, amounted at 1st December, 1896, to $1,071,660,690, against which mass of money—lessened by say $100,000,000, or $150,000,000 cash held in the Treasury—the United States Treasury is supposed to maintain a gold reserve of $100,000,000 of dollars. Having explained briefly the banking and currency system of Canada, the tenth paragraph concerns itself mainly with our note issue and our branch banking; the safety of Canadian bank notes; the expansion of the circulation from say $29,000,000 at one time in the year to $36,000,000 at another, the average of these sums being last year 50.76 per cent. of the aggregate paid-up capital of our banks, which are 37 in number, with about 500 branches. "The result of the branch system is that the loanable capital is directly gathered where it can be found and directly lent where it is required."

Why Canada is not troubled with a bimetallic agitation is thus explained in conclusion: "The agitation in the United States in favor of the unlimited coinage of silver is simply the form in which the discontent with existing conditions is expressed by those who do not understand currency and banking problems. . . . "The violent policy of Jackson [president in 1832] led to the Treasury system, the ruin of branch banking and the survival only of the weak State banks;

---

* Published by the Gold Standard Defence Association, Sir John Lubbock, president, 11 and 12 Clements' Lane, Lombard Street, London: No. 26.

and these conditions caused the issue during the war of non-interest-bearing notes for use as money, which was followed by an agitation for fiat paper money, and later by an agitation lasting for twenty years, for the free coinage of silver. . . . With a sound and elastic currency, and a banking system which ensures an equitable rate for borrowed money, Canada naturally has practically no public discussion on the question of bimetallism except in the case of the few who imagine that they find a connection between the general fall in prices and the so-called demonetization of silver.

NATIONAL POLICY AND INTERNATIONAL TRADE.

A paper read at the Economic Section of the British Association by the eminent Oxford University economist, Edwin Cannan, gave rise to an interesting discussion. The subject of the paper was National Policy and International Trade, and the discussion of its merits was the more interesting because there were present representatives of the English free trade and the American protectionist schools. Mr. Cannan's paper was largely devoted to a criticism of the protectionist argument that protection is necessary to give diversification of employment, and also in giving rise to manufacturing industries its whole tendency is to foster a large population in the country. The fallacy of regarding large exports as advantageous to the country and large imports as harmful was emphasized. "No one would suppose," said Mr. Cannan, "that the individual would gain by refusing to buy products of another; then why should the State?"

Mr. Bryce, a prominent member of the British House of Commons, in a strong speech favored free trade as a principle, refusing to admit that the industries of Germany had prospered by protection, but thought that perhaps a part of the industrial progress made in Russia within recent years was due to the protection given home trade by large import duties. Professor Mavor, of the University of Toronto, in an exceedingly able speech, pointed out the impossibility of applying any abstract principle to all countries, and under all circumstances. The whole question was so hopelessly involved in politics, that it was impossible to consider it with advantage from the side of economics alone.

FOR GROCERS AND PROVISION DEALERS.

The bakers of Winnipeg have been notified of a rise of 30 cents a barrel in flour.

A Montreal buyer recently made a purchase of over 1,500 boxes of prime cheese from P.E. Island factories, for which he paid top prices.

Foreign cables continue to quote high prices on Sicily and Bari shelled almonds, stating that the crop promises to be unusually light.

The Elma, Ont., Cheese and Butter Manufacturing Company have decided to build an addition to their factory to be used as a butter-making and press room.

According to reliable reports, the crop of Sultana raisins is expected to turn out fully 40,000 tons, somewhat larger than that of the past season, and of very superior quality.

Advices are to the effect that the Malaga raisin crop is decidedly larger than last year, but owing to dry weather there will be a larger proportion of small fruit. Shipments will commence earlier than in other years.

Wilhelm Schroeder, writing from Amsterdam, August 6, says: "The largest importers of nutmegs and mace have given notice that at the next periodical sale in September they will only sell the quantities bought in at the last sales."

Mr. W. C. Hobkirk, fishery overseer, who is in the western part of the Northumberland Straits with the steamer "Fred. M. Batt," has destroyed a large number of lobster traps this week, belonging to persons who appear to be fishing, despite the close season.

It is the opinion of leading orchardists of the county that the apple crop of the valley as a whole will not be more than a quarter of last year's crop. The fruit is also of an inferior quality. There is a large crop of pears, and about half a crop of plums.—*Wolfville, N.S., Acadian.*

The Okanagan Flour Mills Co., Limited, of Armstrong, B.C., has declared a dividend of eight per cent., as well as $3 per ton on wheat delivered during the year ending July 31st, 1897. Beside this, a reserve fund of $2,650 has been created. This is a very good showing for a British Columbia mill, as the Pacific province does not claim a strong point in the milling industry.

Mail advices just at hand state that the export of tea from Shanghai and Yang-Tsze ports for the United States and Canada from June 30 to July 17, inclusive, have been 161,900 packages black and 591,693 packages green, making a total thus far this season of 3,120,549 packages, against 2,459,778 packages for the same time last year.—*N.Y. Journal and Bulletin of Commerce.*

Wisner & Co., in their circular, dated Shanghai, July 24, say: "Black Teas—A small business has been transacted on this market; prices are firm and 13½ tls. is the lowest quotation for clean common; there is a very good enquiry, but operations are limited by the paucity of supplies. Scarcely any second crop teas have been offered here, as, in spite of the indifferent quality, they have met with ready sale at Hankow to Russian buyers, the yield promising to be only about one-half of what it was last season. Green Teas—A few Moyunes and Teenkais have been shown, but not insufficient quantity to enable us to report on the crop as a whole; the one Moyune sold, as below, shows about 6 to 7 taels over last year's opening prices. In Teenkais the few really fine chops offered have met with good competition, the teas being desirable in every respect; the prices paid are from 20 to 25 per cent. over last year's rates. A fair business has been done in Soeyoans and Fychows at from 17 to 25 per cent. over last season's opening rates; the former are rather better in style and cup than last season, but in the preparation of the latter no care whatever seems to have been taken. In local packs and Wenchows there have been moderate purchases, but quality is now beginning to fall off. Tea men generally assert that total supply will not exceed that of last year; some put it at 10 per cent. less."

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, August 26th, 1897, compared with those of the previous week:

CLEARINGS.	Aug 26.	Aug. 19.
Montreal	$10,903,284	$11,813,408
Toronto	6,243,367	7,213,514
Halifax	1,154,205	1,308,891
Winnipeg	1,181,856	1,754,456
Hamilton	518,909	606,959
St. John	621,150	649,172
	$20,622,771	$23,346,400

Aggregate balances this week, $2,925,681; last week, $3,640,889.

—The shareholders of the Bank of British Columbia held their annual meeting in London, England, about three weeks ago, at which they had their former general manager, Mr. W. C. Ward, who had recently visited all the bank's branches both in the United States and Canada. In consequence of this visit, his report direct from the field of the bank's operation, nearly six thousand miles distant, was of more than usual interest to those present. It could have been no surprise to them to hear that their business at the American branches had shared in the general financial depression that has hung over that country for some years. Now, however, that cloud is gradually disappearing and better results are expected. In British Columbia a decided improvement is apparent. Mining operations are gradually extending and there is a steady increase in the output, which is a substantial evidence of progress. Now it does not look as though the bank would require to use the amount it had provided to meet contingencies. Already a large sum that has been written off again appears on the right side of the profit and loss account. Out of the profits of the year a dividend at the rate of four per cent. per annum was declared. This absorbed £12,000, leaving a balance of £2,382 to be carried forward. In unanimously electing Mr. Ward to a seat at their board the shareholders acted wisely, as they cannot fail to profit largely by his experience in their fields of operations. His successor in Victoria, B.C., will prudently and carefully look after the banks interest, and we shall not be surprised to hear that the current year had proved a much more profitable one than the past.

—The Montreal Exhibition was not attended with that measure of success which should mark the annual fair of the metropolis of Canada. The exhibition of live stock was excellent, speaking well for the farmers of the Province of Quebec. The entries in the poultry section numbered 1,800, and further exhibits had to be refused for want of space. In the horticultural department the display was pronounced by authorities to be fully as good as that of the Industrial Exhibition in Toronto last year. If the manufacturers of Montreal had given the Fair their hearty support, the exhibition of machinery and manufactured products might not have been excelled by any previous fair in Canada, but for some unexplained reason they have failed to do this, and the display of manufacturers' products was not as interesting as it should have been. The authorities who are responsible for the success of the Fair were unfortunate in having several rainy days, which no doubt kept intending visitors away from the grounds. The days of the present week were devoted to special interests, as follows: Monday, Civic Day; Tuesday, Farmers' Day; Wednesday, American Day, and Thursday, Ladies' Day. On Tuesday the Hon. Mr. Marchand visited the Fair, and was the recipient of a complimentary address.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending July 31, 1897.

			CAPITAL.					LIABILITIES.					
			Capital authorized.	Capital subscribed.	Capital paid up.	Amount of Rest or Reserve Fund.	Rate per cent. of last Dividend declar'd	Notes in circulation.	Bal. due to Dom. Gov. after deducting advances.	Bal. due to Provincial Governments.	Deposits by the Public payable on demand.	Deposits by the Public payable after notice or on a fixed day.

Molsons and Imperial Banks bonus of 1%, making dividend of 9%.

J. M. COURTNEY, *Dep'y Min. of Fin.*

Correspondence.

CANADA'S WEALTH IN MINES.

Editor MONETARY TIMES.

SIR,—I was one of those who had the privilege of being present at the lecture of Mr. Roberts-Austen on the "Metallic Riches of Canada," in the Massey Hall before the British Association. A memorable lecture to all who heard it. The lecturer contrived to give a great deal of information without being tedious, and his experiments were beyond all praise for their great interest and novelty. But besides all this, when one remembers the character of the audience, scientific men from the United Kingdom and the continent of Europe, it seems impossible but that such a lecture must attract attention in an unwonted degree to Canada.

I have not seen anywhere any acknowledgment of thanks to the authorities who secured for us such a treat as this lecture and the lecture of Prof. Milne on "Seismic Disturbances in Japan," and I do think, Mr. Editor, that whosoever is deserving of public thanks for this boon should receive at least some recognition.

Therefore, knowing from recent articles in THE MONETARY TIMES that you are taking an intelligent interest in this gathering of the British Association and its benefits to Canada, I ask you to print this letter.

Yours truly,

D. M. C.

Brampton, 21st August, 1897.

TORONTO STOCK TRANSACTIONS.

The following is a list of the transactions on the Toronto Stock Exchange, for the week ending Thursday, August 26th:

Ontario, 10 at 84; Commerce, 70 at 129¾-130; Dominion, 240 at 236-237⅛; British America Ass., 510 at 125-125¼; Western Ass., 665 at 166-166¼; Can. N.-W. Land pref., 1,261 at 49⅛-52; C.P.R. Stock, 1,050 at 70¼-73; Toronto Electric Light, 165 at 136-136¼; Montreal Gas, 400 at 191-193½; Commercial Cable, 1,325 at 178½-181¾; Commercial Cable reg. bonds, $33,200 at 106-106½; Toronto Railway, 1,150 at 80⅜-81¾; Brit. Can. Invest., 500 at 95; Building and Loan Association, 192 at 60; Can. Landed and Nat., 60 at 102½; Can. Permanent Loan, 137 at 115-115¼; Central Can. Loan, 5 at 124; Farmers' Loan and Savings, 6 at 77; Freehold Loan, 26 at 103-106; Hamilton Prov., 2 at 107; London and Can. Loan and Agency, 420 at 90-95; Man. and N.W. Invest., 40 at 80; Ont. and Qu'Appelle, 50 at 39¾.

CANADIAN TIMBER ABROAD.

On Wednesday, August 11, Foy, Morgan & Co. resumed auction-selling after the holiday interval, but the occasion was not very auspicious, the catalogue being largely made up of goods for which the demand just now is not particularly brisk. We must not attribute the poor prices realized for the Canadian deals solely to the absence of buyers, as the lines submitted were of poor class, and not at all representative of the qualities assigned them. The Quebec pine, ex "Burton," was a very indifferent specimen of Canadian production, being from the Chaudiere river, and though it bore the mark of a well-known Quebec spruce shipper, it failed to find favor with the bidders present. There was not a single redeeming feature about it, and the prices it realized must not, therefore, be taken as any index to what is now ruling for really class goods. The cargo ex "Myrtledene," which was withdrawn from the catalogue during the sale, was chiefly composed of the rejections from various stocks at Montreal and Quebec, and although described as first quality, was evidently not appreciated as such, and we think the selling broker acted wisely in his discretion by not pressing it. The cargo of British Columbian pine ex "Senator," from Vancouver, cut a sorry figure in regard to prices, and did not make an average of £10 a standard. With freight and charges to come off the prices the result leaves a very poor return to the shipper, as the cargo was of fair average character, and described in the catalogue as "selected."—*Timber Trades' Journal.*

FUEL GAS FOR CITIES.

The *Engineering News* says: "The failure of commercial attempts to supply fuel gas to cities in the United States is strikingly set forth in an exhaustive paper by Mr. F. H. Shelton, of Chicago. The paper, it must be understood, does not deal with the isolated plants for making fuel gas for use on the premises in manufacturing purposes, nor with the supply of illuminating gas for fuel by illuminating companies. It deals wholly with commercial attempts to supply a cheap non-luminous gas as a substitute for coal or other forms of heat for domestic and manufacturing purposes. The number of attempts described by Mr. Shelton is twenty-seven. These have been made under a variety of conditions, in both large cities and small villages, and all but five have utterly collapsed, while of these five, two have been trying to change to illuminating gas; one plant is operated chiefly to furnish gas to a large manufactory, and the other two, although in operation for a number of years, have never paid a dividend. Ten of the attempts Mr. Shelton characterizes as raids upon existing gas companies, six of which resulted in consolidation and the abandonment of fuel gas. Fourteen of the trials are characterized as genuine attempts to meet an apparent demand for fuel gas. Several plants have been promoted by persons interested in selling patent rights. The general cause of failure, especially of the legitimate attempts, is the simple fact that the public soon finds out that the low prices charged for fuel gas are accompanied by low heat units, so that no economy results, while the fuel gas is more dangerous than the illuminating, in case of leaks, and necessitates two sets of pipes, if gas is desired for lighting. Prices cannot be put or kept low enough to compete with illuminating gas, which with the disadvantages of use just cited, results in lack of customers and financial failure, unless a change is made to illuminating gas."

MUNICIPAL STREET RAILWAYS.

The *Engineering News* says: "The steel railway system of Glasgow is now entirely under the control of the municipality, the city recently having leased lines not already acquired. About 99,000,000 passengers were carried during the year ended May 31, 1897. Had the rates prevailed during the year that were charged there years before the city assumed control of the lines, the total fares paid during 1896-97 would have been more than $800,000 in excess of those actually paid. Notwithstanding this reduction in fare the city increased both the service and the wages of all classes of employees, paid interest and 2 per cent. to the sinking fund, over $400,000 to the 'Common Good,' some $60,000 depreciation, $70,000 to the permanent way renewal fund, and placed nearly $100,000 in the general reserve fund. The last two funds now amount to over $350,000. The total receipts for the year were $1,780,000 from traffic and $25,000 from other sources, and the working expenses alone were $1,395,000."

EXPORTING CANADIAN STONE.

Mr. E. Odlum, writing to the Toronto *Globe* on the further development of the foreign trade of Canada, says: "As granite, marble and various ornamental stone are imported from many countries, and as Canada is rich in numerous varieties of high-grade stone, there would seem to be an opening for trade along this line. The fact that Canada imports stone need not prevent an earnest, systematic, persistent attempt to export similar articles. I know many excellent granites, marbles, and free stones in Canada that could be exported as ballast. In bulky, light cargoes ballast is required, and if well managed that very ballast might be used as valuable building and ornamental stone."

TORONTO MARKETS.

TORONTO, 26th Aug., 1897.

DAIRY PRODUCTS.—In creamery butter there has been considerable movement in this market during the week. The quality is uniformly good and prices are quite satisfactory. Dealers are quoting rolls 18 to 19c., and tubs 18c. per lb. The export movement is, as we elsewhere note, good, showing great strength. The receipts of dairy butter on this market have been very large, and as the demand is somewhat

IN order to meet the growing demands of our business we have removed to new and enlarged premises at 92 BAY STREET.

This building has been fitted throughout for the special requirements of our business, and we are in better condition than ever to give the highest quality of work, and a prompt and efficient service.

The Toronto Engraving Co., Phone 2893.

92 Bay St.

limited, as a result transactions in all cases have not been satisfactory. For the finest grades dealers quote 12 to 12½c., and 11 to 12c. for good butter, and 8 to 9c. for the poorer qualities. At outside markets cheese continues to show considerable strength. Dealers quote 9c. and asking in the jobbing trade 9½c. per lb. The quality of eggs now coming forward is good, and sales are made at 11c., with an advance of 1c. per dozen for stock that can be guaranteed strictly new laid. A number of local dealers are making arrangements this week for the export trade and an increase in shipments abroad may be looked for.

Grain.—Trading in wheat is guided entirely by crop prospects. Prices in United States and foreign markets are subject to violent fluctuations according to the superior influences of bear or bull operators. Trading in this market is limited, as the new harvest has not yet come to hand in any quantity, while the old crop is about exhausted. We elsewhere refer in detail to the statistical position of wheat in Canadian and other markets. Oats remain firm and steady. Barley is dull and the quality of the new crop is said to be very inferior. On the whole, the outlook for the barley trade is anything but bright. It is reported that in some districts peas show inferior quality. Rye remains without change.

The stocks in store at Port Arthur on August 14th were 857,118 bushels, and there were received 102,559 bushels, and shipped 157,984 bushels, leaving in store on Aug. 21st, 801,693 bushels.

Green Fruits.—The autumn season movement in Canadian green fruits is now beginning and crop prospects are anxiously discussed. The apple season has not yet opened and movements are not likely to become general until two or three weeks have passed. It is said that in Eastern Ontario merchants are offering from $1.50 to 2.00 per barrel, prices which are in marked contrast to the range of prices a year ago. The prospects for an abundant yield of grapes are said to be good if warm weather be had during the next few weeks. In past years it has been experienced that a heavy yield of fruit has failed to mature on account of the cold weather in the early weeks of September. A large crop of peaches is expected this year. The market, however, has been injured somewhat by the exhaustive quantity of poor fruit already marketed. According to the statements of fruit dealers, growers have shown bad judgment in planting orchards that yield early peaches. The Crawford peach has on the whole been found to give the best satisfaction in Canada. For imported watermelons there has been a good demand during the season. Prices have been fair, while the movement has been quite up to the average. Trade in lemons has fallen off somewhat on account of the cold weather.

Hides and Leather.—There has been little change in the hide market during the present week. Dealers are paying 8½ cents for green hides, while the cured are reported at 8½, 8⅝, 8¾ cents, according to quality. Advices from the Western States market stated that comparatively little interest was shown by packers in the general situation, their attention being taken by the active conditions existing in other markets. The close was firm, but quiet, at 10¾ to 11c. for native steers, 10⅝c. for Texas, 10c. for butt brands, 9¼ to 9½c. for Colorados and branded cows, 10c. for heavy native cows, and 10½c. for light do. Calfskins are steady at 10c. Tallow remains depressed and prices low.

Provisions.—The local provision trade has continued firm. Stocks of nearly all the heavy goods are within small compass and prices are very firm. Long clear bacon has advanced ½c. during the week, and dealers now quote it at 8½ to 9c. per lb. Several cars of this product have recently been imported here from the United States. The most satisfactory feature of the market, however, has been the advance of ¼ to ⅜c. per lb. in the price of lard. For some time the movement in lard has been very slow and prices depressed. It is, therefore, satisfactory to notice the improvement.

Wool.—Values in the wool market remain firm, and the conditions of trade are generally unchanged. Dealers report a limited movement, and say that the domestic mills are not anxious buyers. The course of the market in the United States is observed carefully by the Canadian dealers, as a number of them are holding a quantity of wool at different centres awaiting improved conditions.

MONTREAL MARKETS.

Montreal, 25th Aug., 1897.

Ashes.—The market is described as lifeless, and for the past three weeks there has not been a shipment to Europe of any consequence; a few small lots are being shipped this week. Receipts continue limited, and in this fact alone are the main chances of an advance, there being little apparent prospect of an improvement in demand. The stock in store stands at about 160 brls. of pots, and 20 pearls. Quotations remain at $3 to 3.05 for No. 1 pots; seconds, $2.80 to 2.85; pearls, about $4.30.

Cements and Firebricks.—For the week ending to-day, the receipts of cements have been 13,800 brls. of Belgian, and 1,050 English; last week's receipts were *nil*. There have been some enquiries for one or two large lots; but so far no actual business has resulted, and there is just an ordinary jobbing trade passing at the moment. Quotations are $2 to 2.10 for British, and $1 90 to 2.00 for Belgian. Of firebricks, the receipts this week are 66,000; prices range from $15 to 21 as to quality.

Dairy Products.—Within the week there have been several advances in English cable quotations for cheese, the latest figure being 43 shillings, a gain of 1s. 6d. on last week. The local market is also proportionately stiffer, and fine Ontario is now quoted at 9⅝ to 9¾c.; Townships, 9½c; fine Quebec, 9¼ to 9⅜c. Shipments last week were 88,256 boxes, being 5,086 boxes ahead of the same week last year. Shipments of butter last year were fairly large, amounting to 15,625 packages. The market developed considerable strength within the week, with good demand, and choice creamery is quoted up to 19c.; seconds, 18c.; Townships dairy, 14 to 15c.; Western, ditto, 11 to 12c.

Dry Goods—The placing trip has been pretty well completed, and in a good many cases travellers are at home to attend to wants of buyers who have been attracted to the city by the Exhibition, etc. A fair number of these are reported to have visited the warehouses during the week, and though no large buying is reported, still a fair aggregate of business has been done. A cheap excursion has been arranged for the dates ranging from the 27th to the 30th inst., with privilege to return up to the 20th prox., which will cover the millinery openings fixed for about the 7th Sept., and will likely bring in a goodly number of country dealers.

Groceries.—The demand for goods in these lines is reported as rather improved, though orders are still reported on the moderate side. Quite a few country merchants are reported in town this week, as visitors to the exhibition, and have taken the opportunity to sort up their stocks. Sugars are very steady at the slight advance, both refineries quoting 4 1-16c. as the very lowest for standard granulated, and 3 5-16c. the lowest in yellows; 2nd grade granulated 3 11-16c. at the factory, being just a sixteenth below the calculated laid down cost of German refined beet sugars. The molasses market is, if anything, a little firmer, and holders are asking 24 to 25c. for Porto Rico in lots; Barbadoes, 23 to 24c. in a jobbing way, a cent less for car lots. It is said this year's imports are not larger than last year's, and as some 5,000 puncheons have been taken by sugar refiners, some holders think prices should advance. Teas are dull at the moment, and no advices of interest are reported from primary points. It seems as if canned vegetables were bound to advance, and local agents for several leading packers say they have been instructed to withdraw quotations. Canned salmon continue to be quoted on the coast at $3.35 to 3.50 as to brand. Some further moderate lots of new Valencia raisins are reported near at hand via Liverpool, and the small stocks on spot at the moment are being jobbed at about 6¼c. for fine off-stalk, and 7¼c. for selected. Currants will be dearer this year. A cable just received from Patras quotes Provincials in brls. at 15s. 6d., which means a cost of nearly a cent and a-half more than last year. Sultana raisins will also be higher.

Hides and Tallow.—At the usual weekly meeting of the hide association held yesterday there was no change made in the general quotation for green hides, which remains on the basis of 8c. for No. 1, to butchers, though really higher figures are being paid in some cases as the result of competition from the tanners' buyers. Negotiations are, however, in progress which will likely lead to the doing away with the unhealthy rivalry in buying that has prevailed of late. Lambskins are quoted at 35 to 40c., and calfskins 8 and 6c. Tallow continues dull and depressed at 1 to 1¼c. for rough, and 3 to 3½ for rendered.

Leather.—Some houses profess to find business a little better, but the general demand from shoe manufacturers is not materially enlarged. Fair shipments of Quebec and Western splits and glove, also sole, continue to go forward to England, where a steady market and fair demand are reported. The American market is also reported stiffer for both sole and black, and the trust has just advanced union crop a cent, though some speculation in the trust stock was indulged in, in the expectation that the advance would be two cents. We quote:— Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1

THE NEW YORK WORLD,
THRICE-A-WEEK EDITION
18 Pages a Week - 156 Papers a Year
FOR ONE DOLLAR
Published every alternate day except Sunday

The Thrice-a-Week Edition of The New York World is first among all "weekly" papers in size, frequency of publication, and the freshness, accuracy and variety of its contents. It has all the merits of a great $6 daily at the price of a dollar weekly. Its political news is prompt, complete, accurate and impartial, as all its readers will testify. It is against the monopolies and for the people.

It prints the news of all the world, having special correspondence from all important news points on the globe. It has brilliant illustrations, stories by great authors, a capital humor page, complete markets, departments for the household and women's work, and other pecial departments of unusual interest.

slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c.; Scotch grained, 30 to 35c.; western splits, 21 to 24c.; Quebec do., 16 to 17c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.: Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—There are no very special features in these lines to be noted since last writing. Some moderate sales of pig iron are reported at quotations, mainly domestic, aggregating in all 300 to 400 tons, and for the general run of heavy metals there is a little more enquiry. Iron pipe is stiffening, and has in all developed an advance of about ten per cent. during the past four or five weeks. Pig lead is again firmer, and $3.50 is now given as the lowest figure; copper steady at 12 to 12½c.; spelter firmer at $4.75 for American and Silesian. Supplies of Canada, tin and Terne plates are very slow in coming forward. and considerable scarcity of Ternes is still reported. There is fair enquiry for black, annealed and galvanized wire, on which the discount from list is now 35 per cent. Not much American barb wire is now coming in; the regular f.o.b. price here is now $2.25, with no rebates. Wire nails are being sold on the basis of $1.90 for six inch. We quote:—Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No. 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $16.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6.00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do., I.X., $3.90 to 4.00; P. D.Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 50 to 3.60; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 8½ to 9c.

Oils, Paints and Glass.—The demand in these lines is showing some signs of revival. Turpentine has receded a cent on late advances. Linseed oil is unchanged at late quotations; but the English market is very firm, a cable yesterday quoting raw at £18 laid down in Montreal, equal to cost of 43c. a gallon, whereas it is now being sold at 42c. by the single barrel. Castor oil continues to strengthen, and 10c. is asked in small lots. We quote:—Turpentine, one to four barrels., 43c.; five to nine barrels., 42c., net 30 days. Linseed oil, raw, one to four barrels., 42c.; five to nine barrels., 41c.; boiled, one to four barrels, 45c.; five to nine brls., 44c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 9½ to 10c. as to quantity. Leads (chemically pure and first-class brands only), $5.25, No. 1, $4.87½; No. 2, $4.50; No. 3, $4.12½; No. 4, $3.75; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 12½ to 13c. in bulk; packages, 14c.; window glass, $1.30 per 50 feet for first break; $1 40 for second break; third break, $2.90.

Queen City Chambers, Church St., Toronto.
DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

A. B. POWELL.

A PROTEST FROM ROSSLAND.

Rossland advices of the 14th say that a committee consisting of Messrs. Oliver Durant, J. S. MacArthur, and J. F. McRae, appointed at a mass meeting on Thursday night to prepare a memorial to the Dominion Government opposing an export duty on Rossland ores, has completed its labors. The memorial is very lengthy. It begins by reciting that the first agitation to impose an export duty on Rossland ores originated at Nelson, and that a mass meeting was held, when the resolutions already published were adopted unanimously. It then quotes the Nelson paper and proceeds to demolish the statements and arguments therein contained. First, as to the capacity of the Rossland mines, it says that within a few months at the present rate of development the output of half a dozen mines will reach 2,550 tons of ore per day, as follows:

	Tons.
Columbia and Kootenay..	250
Centre Star	1,000
Le Roi......	800
War Eagle	250
Josie and others	250

The paper then says the Trail smelter has a capacity not exceeding 250 tons per day, while the Nelson and Pilot Bay smelters cannot be included, as with the present railway facilities and freight rates neither plant can afford to purchase Rossland ores. It then states that if the charges for transportation and treatment of Rossland ore were reasonable, the company would to-day be shipping 1,000 tons per day instead of 300.

"The great and crying need of Rossland camp to-day," the memorial continues, "is cheap and direct communication with the Columbia River in the direction of Robson. The C.P.R. has already surveyed a line to Robson on easy grades which would not exceed twenty miles in length, and a railway along this route could be quickly and cheaply built, at a cost not exceeding $250,000. The day this line is built Rossland will furnish the C.P.R. with not less than 1,000 tons per day."

The memorial then goes on to say that the natural smelting point of Kootenay is in the neighborhood of Robson, where all the different varieties of Kootenay ore, together with fuel and fluxes, can be most cheaply assembled. It then states that several mining companies stand prepared to erect a smelter; then they are assured that the C.P.R. will build the line, and the manager of the Centre Star Company is in possession of a letter from a well-known banker of the United States, who has already invested over $250,000 in this camp, stating that he will furnish all the money necessary to erect and operate a smelter of a capacity of not less than 500 tons per day, and also stating that on no account would he erect a smelter in the State of Washington; that the principal stockholders of the War Eagle Company have also announced their intention of building a smelter at or near Robson as soon as cheap transportation is provided.

There is a strong and apparently well grounded rumor, says the memorial, among the owners of the camp that there exists between Mr. Heinze and the C.P.R. some understanding by which the C.P.R. agrees to keep out of this camp, and it shall be between them considered Mr. Heinze's reserve. This opinion is strengthened by the fact that in a recent authorized statement issued by the officials of the C.P.R. it was said they were negotiating with Mr. Heinze for satisfactory rates for Rossland, and if they were not granted the C.P.R. would build its own line. This was over a month ago, but nothing further had been heard of the matter, and so far as the public knows nothing has been done. The memorial recites the claims of the Rossland mine-owners on the Dominion Government and the C.P.R., showing how they have developed their properties under adverse conditions until they are in a position to ship not less than 750 tons of ore per day. They also claim that they made the construction of the Crow's Nest Pass line necessary, and justified the Government in voting an enormous bonus. The memorial concludes by showing that an export duty on ores would be most injurious, and urging the Government to permit no unnecessary delay to occur in building a road from Robson to Rossland, which is all that is needed to secure a reduction of Rossland ores in Kootenay.

A special from Nelson says Mr. Paul Johnson, manager of the Halt mines smelter, has resigned, to take a more lucrative position with the Guggenheims at Ajuai, Mexico. He will probably be succeeded at Nelson by Mr. R. Hadley.

EDUCATED LABOR.

It is stated that an effort is being made in Russia to discourage education among the working classes. Some arrests are reported as having been made for teaching workmen how to read and write. The reasons given are that when labor was uninstructed in these matters, it was not so accessible to plotters against the public peace. The ignorant Muscovite was a contented creature. He was tame on black bread; submitted to harsh treatment without rebelling against it, and his ambition, if he had any, was without mental or moral life. The idea that educated labor is prone to discontent and anarchy is by no means limited to the august dominions of the Czar. It is, however, a grave mistake. Education does not always keep a man from making an ass of himself, but it certainly reduces the population of fools, of which in all countries there is always a deplorable surplusage. In educated labor we have the Gibraltar of progress and prosperity. —*Age of Steel.*

WASTEFUL ECONOMY.

At the risk of being charged with high treason, and conscious of the fact that such a theory is in contravention of the accepted idea of progress in railway operation, it may be well to raise a question if the present tendency towards heavier track, more powerful locomotives and larger cars has not reached its practical limit, if indeed it it has not already exceeded it. The fact that a railroad is primarily designed and operated for the purpose of making money, is too often lost sight of, and some officials in charge of the various departments are apparently impressed with the idea that its chief use is for the exploitation of their various hobbies. Railroads were not intended to establish the superiority of any particular system of construction, either of roadway bridges or buildings; not to prove the superiority of the compound over the single expansion engine, nor even demonstrate the possibility of transporting a given number of passengers or tons of freight over long distances within certain hours. On the contrary, railroads were built and should be operated for the purpose of making money In this respect they are no different from any other commercial enterprise.

THE RELATIONS OF COTTON AND CELLULOSE.

The relations of cotton and cellulose present some peculiar chemical phenomena, and these have been the subject of various experiments by textile manufacturers. On exposure to air, cellulose absorbs moisture or water—hygroscopic moisture, or "water of condition"—the amount in cotton being about 8 per cent., this having a very important bearing, it is found, on the spinning properties of the fibre, as it makes the latter soft and elastic, while dry cotton is stiff, brittle and non-elastic. The cotton cellulose is insoluble in all ordinary solvents such as water, ether, alcohol, chloroform, benzine, etc., these agents having no influence in any way on the material. But when cotton or other form of cellulose is heated with a strong solution, 40 to 50 per cent. of zinc chloride, it slowly dissolves to a syrup liquid, and, on diluting this liquid with water, the cellulose is thrown down in a gelatinous form, but more or less hydrated, and containing some 18 to 25 per cent. zinc oxide in combination.

SPIDERS AS FOREST PROTECTORS

Dr. C. Keller, of Zurich, asserts that spiders are doing most important work in preserving the forests by protecting trees against devastations on the part of insects. Dr. Keller opened the intestines of a large number of spiders and found that they are voracious enemies of the most noxious insects. According to his idea spiders are more beneficial to the maintenance of forests than all the insect-eating birds put together. Forestry commissioners and other interested people have taken up the subject and prizes are offered for the propagation and distribution of insect-eating spiders in forests.

THE TRANSPORTATION TAX.

The discriminating duty of 10 per cent. ad valorem which, under the new tariff law is imposed "on all goods, wares or merchandise which shall be imported in vessels not of the United States, or which, being the production or manufacture of any foreign country not contiguous to the United States, shall come into the United States from such contiguous country," is exciting considerable discussion and provoking expressions of opinion of various kinds. For ourselves we are unable to see wherein there is anything unjust in such duty, provided it is admitted that the principle of justice underlies the application of any tariff duty. In the protests that are made the Canadian railroads are referred to as the sufferers therefrom, but it will be noticed that the rule applies equally to vessels not of the United States. The intention of the law, therefore, is evidently to put all foreign carriers on the same plane, and in that aspect of the case there is no more injustice in subjecting the rail carrier to such a tax than that the water carrier should be made to pay. Both are alike unfortunate by reason of location, but no protests on behalf of the foreign vessels have appeared. There is certainly nothing inconsistent in seeking in a bill which protects domestic manufacturers, to include in such protection that other fundamental element of commerce known as transportation. The proposition that if American goods are to be protected, why not American vessels and American railroads, is sound. It is possible, of course, that the application of the rule will in some cases work a hardship, but the entire movement of commerce considered, there would seem as a matter of comparison to be no legitimate objection to the law.—*Railway Review.*

INDUSTRIAL PROGRESS.

The efforts of manufacturing interests to stimulate demand for their products has so far failed. There has been an improvement in business, but it has been voluntary. Steel makers everywhere are doing more business, but not in a large way. The iron trade at large is gaining slowly even before a decided outside impulse has been imparted. We are now told that when farmers realize on their crops the filtering process by which manufacturing interests are to be benefited, will begin. A strong tonic has been administered and vigor is manifesting itself. Bankers report a sharp improvement in demand for money. Specifications for new work in large numbers were submitted last week. Bids are being made on the basis of present prices. Railroad managers will not hasten their steps. Pig iron and billet rolling mill capacity is such that, in their opinion, much variation in price is improbable. The coal strike is threatening to restrict iron making to a limited extent in two or three localities. Coke production is increasing, and prices are steady.—*Railway Review.*

50 YEARS The Year 1897 is the **SEMI-CENTENNIAL**

OF THE

Canada Life Assurance Company.

ESTABLISHED 1847.

President, A. G. RAMSAY, F.I.A.

Secretary, R. HILLS. Superintendent, W. T. RAMSAY.

DECISIONS IN COMMERCIAL LAW.

HOPE V. BRASH.—The action was brought for a libel published in a newspaper belonging to the defendants, who by their defence admitted the publication of the libel, and pleaded that the libel was published by them without actual malice and without gross negligence; that before the commencement of the action they published in their newspaper a full apology for the libel and they paid into Court a sum of money in satisfaction of the plaintiff's claim. In their affidavit of documents they stated that they had in their possession or power the documents relating to the matters in question in the action, one of which was a manuscript of the matters published in their newspaper, but they objected to produce it on the ground that it was the original contribution to them, and was that which was published by them as admitted in the statement of defence, and as to which they admitted responsibility. The Court of Appeal in England held that where in an action against the proprietors of a newspaper for a libel published in the paper the publication and responsibility for the libel are admitted, the Court as a general rule will not order the original manuscript of the libel to be produced for inspection. They were of opinion that there were no special circumstances in the present case by reason of which the Court ought to depart from the general rule.

MACAULAY V. POLLEY.—The Court of Appeal in England has decided that a solicitor has no power in the absence of express authority to compromise a claim on behalf of his client before an action has been commenced.

Re MAGNOLIA METAL COMPANY'S TRADE MARKS.—The Court of Appeal in England decided that, in absence of special circumstances, the geographical expression used under the patent Acts must be construed in accordance in some degree with the general and popular meaning of the words, and not be held to denote a name which is commonly known in a non-geographical sense; and where the places called by such expression are hardly known, though however little known the places called by that name may be, yet if the name has been given to an article manufactured in one of those places it is a geographical name, as, for instance, "Apollinaris"; and the court held in this case, where name Magnolia had been applied to a compound metal with reference only to the name of the flower, that it was not disentitled to be registered as a trade mark, because there was some obscure places in America called by that name, though it was held disentitled on other grounds.

THE importers of Toronto, who asked for a ruling from the Customs Department regarding the payment of the rebate of one-eighth on French goods imported through England, have received a reply. It states that goods sent through Great Britain on a through bill of lading will be treated as direct shipments, or if it can be shown that the goods remain in the carriers' hands in Great Britain in transit, or forwarded in the original packages. Evidence of such through transportation in the form of shipping bills should be furnished the collector, and be attached to the entry inwards, in order to pass goods at and be reduced. This ruling means that goods may be purchased in France or any other country entitled to the one-eighth rebate, and if shipped by way of England in the original packages will still receive the rebate.

Mercantile Summarv.

THE gold output of India during July aggregated 32,276 ounces, against 32,008 ounces in June and 26,119 ounces in July, 1896. The total output for the first seven months of 1897 was 218,947 ounces.

THE blue berry crop is a failure in the Lake of the Woods district. In previous seasons several tons of the fruit were shipped into Winnipeg, but this year only a few small shipments have been received.

THE St. John *Gazette* says forty cases of smuggled whiskey were found beneath the floor of Hebert's hotel, Kingston, Kent Co, recently, by collector Johnston of Richibucto. The whiskey is said to be part of a quantity recently smuggled into port by a schooner.

THE Quebec Central Railway Company are about to commence to relay a considerable portion of their main line between Sherbrooke and Quebec with new seventy pound steel rails. The Carnegie Steel Company are supplying the rails, the quantity being between two and three thousand tons.

SALES of about 3,000 boxes of Prince Edward Island cheese have been made to a firm here at 8c. f.o.b., at the Island, costing 8⅛c. laid down here. Some of the factories on the Island are selling their cheese direct to English houses through the former Government inspector, who has no connection with the Government now. Altogether about 7,000 boxes of P.E.I. cheese have been sold, leaving the factory men with only their August cheese on hand. It is estimated that P.E.I. make will be about 35,000 boxes this season.—*St. John, N.B., Sun.*

THE authorities of the Grand Trunk Railway are considerably exercised over the fact that many counterfeit tickets have been issued in connection with the camp of the Grand Army Veterans by Chicago brokers, and have notified all the conductors to be on the *qui vive.* They have been informed that tickets issued by the company at places west of the river bear the word "Perfect" in the form of a water mark, and that any ticket without this is not genuine.

THE return of shipments of iron and steel for July from Middlesbrough, England, just issued, says the shipments of pig iron were the smallest which have appeared since February, being 96,830 tons, as against 114,310 tons in June; 41,532 tons were sent coastwise, as against 50,193 tons in June, and 55,298 tons to foreign ports, against 64,117 tons. This shows a decline of 17,480 tons in the total upon June, the deficiency being nearly evenly distributed between home and foreign deliveries.

T. R. E. MCINNES, son of Senator McInnes, and one of the customs officers sent north by the Dominion Government, sends to the Victoria, B.C., *Colonist* a graphic description of the difficulties of travel of the Chilkoot Pass from Dyea, and the White Pass from Skagway. While the White Pass is hard to get over, horses cannot recover the summit of the Chilkoot at all. It is 1,700 feet higher than the White Pass. White Pass trail is dotted with goods which are being packed over. He advises the intending miners coming in spring to have their outfit, as far as practicable, packed in fifty pound packages for easier handling. and not to bring boats at all, as they can be bought at the lakes. Boats taken from coast towns have had to be left behind and sold as lumber, as it is impossible to pack them over the trails.

THE New York *World* says that a steel company in Cleveland has just received orders for 20,000 tons of rails for electric roads in Ireland. In securing this contract, the English mills were underbid. And yet the Dingley law contains a duty of $7 a ton on steel rails to "protect us from the pauper labor of England!"

FROM recent interviews with grain men the Winnipeg *Free Press* learns that while the prevailing price for spot wheat, No. 1 hard, is about 85 cents on track, on the basis of Brandon freight, wheat for future delivery, say first of October, is considerably less. The impression seems to prevail that wheat for October shipment is worth as much as spot wheat, but there is a difference of from 8 to 10 cents per bushel. New wheat for shipment in Duluth is quoted at 13 cents less than old wheat.

THE Chatham *Planet* discussing a proposition from a company to provide the city with gas service, says: "It is always a foolish thing to enter into an agreement that has no period of termination. In that respect there is one objectionable feature in the offer of the Standard Natural Gas Company. It proposes that in event of the council expropriating the city system that the city bind itself to take natural gas from the company at a specified rate for all time to come. Chatham would be insane to make any such bargain. The company has the right, in consideration of the large outlay it proposes to make, to ask for a monopoly for a settled number of years, but in no case should the term exceed twenty. Fancy what a position the city might be placed in by an indefinite agreement. Twenty, fiffy or one hundred years hence someone might have gas wells around here from which it would pay to supply gas at two cents per 1000.

Mercantile Summary.

FROM the Behring Sea comes word by the steamer "Portland" that the entire catch of the North American Commercial Company for the season was 20,000 skins, which are now en route to San Francisco on the steamer "Delnorte." Last year's catch amounted to over 20,000 skins. Instead of over seventy sealers that hunted last year in the Behring Sea there are only twenty-nine this year.

MR. FIRMIN HUDON, of the wholesale grocery firm of Hudon & Orsali, died at his residence, 90 Cherrier street, Montreal, this week. Deceased was born in 1840. He founded the firm of Hudon & Orsali in 1875, and conducted its business up till recently. He was well known for his business abilities, and highly respected for his integrity. The deceased had been in poor health for some time past.

ONE by one the big saw mills along the Indiantown harbor front, says the St. John *Record*, Aug. 26th, are closing down for indefinite periods, all on account of the glutted condition of the American market. As soon as the stock of lumber now on hand is used up by the dealers across the line, the demand for our Canadian lumber will spring up. As a consequence of the lumber depression, the schooner business has dropped off considerably. The Randolph & Baker's big mill is shut down after a long run.

THE city of Halifax, N.S., proposes to erect its own plant and do its own street lighting in the future. According to the exponents of municipal control, Halifax now pays something like $21,500 per year for their street lighting. They will put in a $49,000 plant to run 250 arc and 1,500 incandescents. The interest would thus mean an outlay of $17,000 a year, or a saving to the city of $4,509 per year.

ASSISTANT SECRETARY HOWELL, of the United States Government, has received the following telegram from Seal Commissioner David Starr Jordan, at Seattle, Washington: "Investigation successfully completed. Shrinkage of breeding rookeries 15 per cent. since last year of killable males, 33 per cent. Latter due to starvation of pups from pelagic sealing in 1894. Former due to last year's destruction of females plus starvation of pups in 1894. Conclusions of last year completely vindicated in all important regards."

A RECENT advice from Vancouver, B.C., says the Dominion Developing Company has sold 100,000 shares of Golden Cache stock for $180,000 to J. Oldroyd, M.P. for Dewsbury, England, a member of a big cotton firm. This enables them to pay $2.07 per share dividend on their shares. This company, managed by J. McQuillan, originally raised the $30,000 to buy the Golden Cache mines, getting in lieu thereof 125,000 shares of Golden Cache. This is said to be the biggest spot cash sale of stock ever made there.

ABOUT ten days ago J. Garvey, grocer and liquor dealer of London, took possession of the hotel, Detroit Exchange, Windsor, by virtue of mortgages which he held from his landlord, John Allison, amounting to $670, at the same time paying off several claims which stood against the place, and for which the bailiff was then in possession. Mr. Allison is now ill at Emergency Hospital, Detroit, and yesterday he made an assignment of all his goods and chattels to J. B. Churchill for the benefit of his creditors. Churchill attempted to take possession, but Mr. Garvey's agent would not have it that way, and sent him about his business. Mr. Garvey claims to be acting fully within his rights in so doing.

THE Customs Department has enlarged the regulations respecting the importation of coal oil in tank cars, so as to allow it to be warehoused in bulk instead of being barrelled on arrival, as has been the rule heretofore.

LIEUT.-COLONEL DOMVILLE, M.P., has organized a company in England, with a capital of £200,000, for the purpose of trading, transporting, exploring and developing mining properties in the Yukon and Kootenay districts. Arrangements are being made to send a body of picked English and Canadians, accompanied with engineers, etc., who are adapted to the necessary work, on an expedition of this sort. E. J. Howell, of Victoria, B.C., will be assistant manager.

A NUMBER of changes have been made within the past few days in the staff of the Intercolonial. The appointment of Mr. W. H. Olive as agent at Montreal, in succession to Mr. G. W. Robinson, has been announced. Besides this change, there have been three others of considerable importance. Mr. P. S. Archibald, who has been chief engineer of the Intercolonial for years, has been retired and replaced by Mr. W. D. McKenzie, formerly assistant chief engineer. Mr. McKenzie is in turn replaced by Mr. T. C. Burpee, late with the Bangor and Aroostook. Mr. T. V. Cook has been replaced as general storekeeper by Mr. C. R. Palmer, at one time station agent at Dorchester, N.B.

Mercantile Summary.

An interesting discussion on the proposed French maritime canal between Bordeaux and Cette took place at the last sitting of the Geographical Congress, at St. Lazaire. M. Guenot, delegate of the Geographical Society of Toulon, pointed out that, apart from the great maritime canal, it was possible to cut a canal of medium width which would give every satisfaction to the population. M. Guenot was immediately contradicted by the partisans of the great maritime canal. They showed that the coasting vessels were at the present time not ships of 300 tons, but steamers with a tonnage double that amount, drawing five and a-half or six metres of water. Therefore a canal four metres deep would be of no use, the depth must be at least six metres. In that case, the canal would cost 600,000,000f., and under those conditions, they asked, would it not be well, by the expenditure of another 200,000,000f., to create a canal accessible to the largest existing commercial steamers and ironclads?

One of the cleverest bank robberies in Canada was successfully accomplished in the Napanee branch of the Dominion Bank some time between Friday night and Saturday morning last. On Saturday morning when the bank unlocked its doors for business the officials were unable to open the vault. A watchmaker was called in, but after following the usual procedure he had to acknowledge himself beaten, and the Manager of the bank, Mr. E. H. Baines, telegraphed to Toronto for an expert to come down and doctor the refractory lock. The Merchants' Bank kindly accommodated the Dominion Bank for the day's business. In the evening the expert arrived and immediately set to work to open the vault. After several hours success crowned his labors. The safe proved as difficult of entrance as the vault, but the task was finally accomplished. The opening of the safe disclosed the fact that the bank had been robbed of $32,000. The daring and accomplished villain had opened the combinations of the vault and safe, coolly extracted the money, and then as a further proof of his cleverness changed the combinations of both doors and walked out with a fortune. The bank building fronts on John street, one of the most frequented streets in town, and a light is kept burning in the buildings at night. The bank is a stone structure, and there is but one vulnerable spot in the whole building, a small wooden shed containing a passageway leading into the bank. The burglar gained admittance to this by boring holes in the block siding and removing the boards in the partition. Ten thousand dollars of the money was unsigned by the Manager, but the balance, $22,000, bore his signature. Seldom are professional burglars fortunate enough to meet with a safe the combination of which they know.

ONTARIO GAS FIELDS.

The United States geological survey has prepared a report on the production of natural gas in Canada, with special reference to the Ontario fields, of which the following is an extract:

"The two fields that supply by far the greater portion of the gas in Canada are the Welland and Essex county gas field in the Province of Ontario. The Welland county field is situated at the north-eastern end of Lake Erie, and the Essex county field is near the extreme north-western end of the same lake. The conditions remain very much the same as described in the report for 1895, except that the Essex county field has been extended about two miles north-east of Leamington, making the entire field ten miles long and about one and one-half miles wide. The surface is only a few feet above the lake, and is almost a level. About thirty wells have been drilled in this field. The gas is found in what is considered the equivalent of the Clinton limestone, at a depth of 1,000 to 1,040 feet. The rock pressure is four hundred to four hundred and five pounds to the square inch.

"There are two companies in this field, the Ontario Natural Gas and Oil Co., Limited, and the Standard Oil and Gas Co., of Essex, Limited. The former company has two pipe lines, thirty miles long, furnishing gas to Detroit, Mich., and to Windsor, Walkerville, Kingsville, and Leamington, Ont. The last named place owns its own gas wells.

"The petroleum field in Lambton county supplies a number of farmers and a few clusters of houses with natural gas, and in Kent and Elgin counties there are many shallow surface wells which furnish a similar provision. There are also a number of shallow gas wells in the north-western part of Aldborough, Elgin county.

"The Provincial Natural Gas Co. has about fifty-five producing wells in Welland county, twelve to fifteen miles west of Buffalo, N.Y.; the wells are 850 to 900 feet deep, running back from the lake front for two and one-half miles. They are connected by a pipe line.

"Following are values of the Canadian output of gas in the past four years: 1893, $6,488,000; 1894, $6,279,000; 1885, $5,852,000; 1896, $5,528,000.

WHY THE SLEEPER PATENT FLEXIBLE INSOLE Sells better than leather

The SLEEPER PATENT FLEXIBLE INNERSOLE makes the perfection of Goodyear Welt Shoes.

It is better than a hand-sewed shoe.

It makes the most comfortable shoe in the world, and the foot makes its impression in the sole, thereby assuring comfort.

It makes a new shoe as easy as an old one, and **does not squeak. No tacks. No nails.**

It makes a better wearing shoe, because the outsoles wear evenly all over, and do not wear out in spots, as with a stiff, heavy bottom.

It can be repaired the same as a leather insole.

It makes as light a shoe as a hand-turned.

It preserves its shape better than a shoe with a leather insole.

Its cost to the wearer is no more.

It never grows hard, brittle and dry as a leather insole does, is always clean and fresh, and does not soil the stocking.

If used in connection with cork in its manufacture it will not wet through.

It is the only method of making a lady's shoe as light and flexible as a hand-turned, and yet provided with a thick sole to walk on and keep its shape.

It will double the production of Goodyear Welt Shoes in ladies' and men's wear.

It is a great step in advance in shoe manufacturing.

People who wear Boots that are made with the "Sleeper Patent Flexible Insole" are more than pleased and will buy no other.

Manufactured only by the
J. D. King Co.
LIMITED
122, 124 and 126 Wellington Street West,
TORONTO.

Mercantile Summary.

A COAL oil stove used for heating irons for pressing was the cause of a $3,000 fire in Graham Bros.' hat store, London, Ont.

THE estate of M. Lefebvre & Co., vinegar and pickle manufacturers, are to be wound up by the assignee. The assets are to be sold at auction and it is feared will realize very poorly, so that a slim dividend is expected.

THE shipments of ore over the Kaslo and Slocan Railway from six mines for the month of July, 1896, were 1,800,095 tons. During the same month this year thirteen mines shipped 5,964,095 tons. More than half of this was forwarded to Pueblo, Colorado, to be smelted, the remainder being divided between four other smelters.

IT was perhaps not made clear last week that the illustrations which appeared on page 259 related to the offices of the Standard Mercantile Agency, Limited, of Toronto, a concern which has secured, within the last year or two, testimonials from a number of wholesale houses as to its success in making collections.

MADAME MOREAU, a Montreal milliner, is trying to settle liabilities of about $1,500 at 25 cents, but wants to make it conditional that creditors shall continue to sell her fresh goods, which some resent —-Leprohon & Leprohon, publishers in a small way, of the same city, offer 30 cents, and L. Montpetit, grocer, wants a settlement at 25 cents, cash.

THE capacity of J. Y. Griffin & Co.'s pork packing establishment at Winnipeg is to be largely increased this autumn. A Chicago architect who is accustomed to buildings of that character has been obtained, and it is said the building when completed next spring will be the third largest of its kind in Canada. New engines, new boilers and complete system of mechanical refrigeration will be put in. This is known as the ammonia system. No ice is required, and the temperature can be regulated at any degree from near freezing to 20 degrees below zero.

THE Montreal Steam Laundry Co., of which Messrs. Love & Jackson are proprietors, have become embarrassed. They have been unfortunate in having two fires in three years, with considerable attendant loss through difficulty of adjustment, and claims for customers' linen, etc., destroyed. They have worked hard to pull through, but have found it necessary to ask creditors for a two years' extension on liabilities of $58,000, which has been generally agreed to. They pay 7 per cent. interest.

THE retail dry goods firm of Jeremie Perrault & Co., Montreal, have assigned. The firm is quite an old one, Mr. Perrault having been one of the oldest merchants on Notre Dame street east, and at one time was in quite comfortable shape. But when trade began to leave the locality, some years ago, he gradually fell behind, having to suspend in 1894, when he compromised liabilities of $19,000 at 35 cents on the dollar. He then moved to St. Catherine street, but has been unable to recover his position.

A. LALONDE, of Cascades Point, Que., formerly a farmer, but keeping hotel for several years past, has been obliged to assign.——Another hotel keeper, W. Harvey, Lachine, has been asked to assign, and has abandoned his estate. — J. A. Sauvageau, dealer in dry goods at Three Rivers, Que., has assigned. He lately arranged an extension, and in 1894 compromised liabilities of $14,000 at 85 cents.——Joseph Lapierre, a small general dealer at St. Antoine des Vercheres, Que., has arranged to pay 40 cents on liabilities of about $2,000.——Alfred Chouinard, of Quebec city, doing a small grocery and liquor business with river people, on the Finlay market, has been obliged to assign.

A SMALL hardware concern, G. R. McCarthy & Co., in business since 1895, at Smith's Falls, Ont., have been reported slow for some time past, and have now assigned.——J. F. Harry, in the men's furnishing business at Belleville, Ont., is arranging a compromise at 40 cents cash, on liabilities of about $1,700.——S. L. Dakin, a storekeeper at Trout Cove, N.S., is reported failed, and contemplates offering 25 cents on the dollar, liabilities being placed at about $4,000.——From Port Maitland, in the same Province, is reported the suspension of C. Nickerson, a trader in provisions, etc., and also running a schooner to St. John, N.B. The liabilities are put at about $7,000, with few assets.

A MONTREAL failure which may prove somewhat far reaching in its effects is that of Mr. T. Costigan & Co., general commission merchants. Mr. Costigan was formerly a partner in the once well known wholesale grocery firm of Tees, Costigan & Wilson, but for some six years past has been doing a commission business in teas, canned goods, etc. He has, however, branched out widely into a number of outside speculations, especially asbestos mining, etc., and has for several years been the registered owner of the Sclater Asbestos Mfg. Co., which concern has, of course, also become involved. He is also interested in a variety of other schemes, and his affairs have become very much involved. Several demands of assignment have been made upon him, and he has consented to assign. No details of liabilities have been yet ascertained.

VISITORS TO MONTREAL

Mercantile Summary.

T. B. BARKER, head of the firm of T. B. Barker & Sons, wholesale druggists, and for years a clerk in the drug store of the late Sir Leonard Tilley, whom he succeeded in business, died aged 77 years, Aug. 24.

W. A. THOMPSON, Boyce Thompson and T. C. Thompson appeared before the police magistrate on the charge of defrauding the creditors of the estate of the John Eaton Company. After further evidence, the magistrate discharged all of them, on the ground that, when in the capacity of directors, they had appropriated money to the payment of creditors, they had acted within the legal powers, though if they had paid debts with goods their course would have been illegal.

THE assignee of C. B. Beardsley, Ottawa, states that owing to the unusual difference between the large amount of goods purchased after the insolvent started business, and the small amount on hand at the date of assignment, the inspectors instructed him to examine the insolvent and afterwards to take proceedings against William Beardsley for an account of the goods received by him from his son. The first proceedings resulted in an order of committal being made against the insolvent. The second was proceeded against William Beardsley as far as an examination under oath. The costs of both proceedings had to be paid out of the estate, and after payment of these and other expenses he was unable to declare any dividend. The proceeds of the assets amounted to $691.60. The liabilities amounted to $12,591.63. Many Toronto houses are interested.

JAMES FREEL, a boot and shoe dealer in Victoria and Vancouver, B.C., who assigned about six weeks ago, has arranged a compromise at 50 per cent. discount.——Creditors are asked for an extension of eighteen months by W. Armstrong, hardware dealer, Vernon, B.C. This will, no doubt, be granted, as his stock is estimated at $25,000; besides this he has some real estate and book accounts. He owes $15,000.——Stitt & Mills, general storekeepers, Slocan City, are in difficulty, and their principal creditors are investigating their affairs. Lack of harmony is said to have existed between them for some time. This, no doubt, is a factor in bringing about their embarrassed position.

EARLY in 1891 Mrs. Elizabeth Potts opened a general store at Little Current, but made no progress, and now assigns. — An assignment has also been made by Thomas Hood, Royal Hotel, Hamilton, who owes about $20,000. Last week we noted that the bailiff was in possession of the premises on a claim of $3,[illegible]00 for rent.——Schram Bros. succeeded J. H. Clark as a grocer and baker at Parkhill about a year ago, investing $500 in the business. Having no knowledge of trade, an assignment is quite in order.——In June, 1893, John F. Harry opened a men's furnishing store in Belleville, and at that time his assets were put down at $1,500. Being rather fond of sport, he did not give the business that attention it deserved. Now he offers creditors 40 per cent. of their claims in cash on liabilities of about $1,7[illegible]0.——After being four years in the grocery business in Hamilton, Daniel Mahoney assigns.—— In the spring of 1896 Dan. McKenzie became tired of farming and bought a hotel at Wingham for $5,000, paying on account of the purchase $2,000, and securing the balance by a mortgage on the premises. As the result of lack of experience and extravagant management, he assigns.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON,
(President of National Association of Credit Men.)

● ● ●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

THE Canadian Bar Association is meeting in Halifax this week.

ARCHIBALD BLUE, of the the Ontario Mining Bureau, has obtained from Centre Island, near Hallam's Bridge, a specimen of magnetic iron sand which is reported to be found in some quantity there. Mr. Blue is having the sand tested so as to determine the quality of the iron.

THE stock of the Dominion Coal Company, Limited, has been listed on the Montreal Stock Exchange. The company pays an 8 per cent. dividend. Among the directors are the following Montrealers: Sir Donald A. Smith, Sir W. C. Van Horne, Mr. Hugh McLennan, and Mr. John S. McLennan. The president of the company is Mr. Whitney, of Boston.

MR. H. B. ALEXANDER, D.L.S., who has been surveying in Shoal Lake district, Manitoba, reports the finding by parties there of a mountain of galena, which he says will run 60 per cent. of pure lead and 100 ounces of silver to the ton. The property, he says, has been staked out by some party or parties unknown. Great excitement is said to exist in Rat Portage over the find and several prospecting parties have left for the new Eldorado.

THE Provincial Cabinet received a deputation of lumbermen on Wednesday, who appeared as a committee from the recent Board of Trade meeting of lumbermen, which adopted a resolution in favor of legislation by which all logs and timber cut on Crown lands must be manufactured into lumber in Canada. After placing the matter officially before the Ministers the deputation asked that the necessary regulations be at once put into force. The Premier in reply stated that the subject was a most important one and would receive very earnest attention. He had noticed, however, that there was a conflict of opinion amongst the lumbermen themselves, and before giving an answer the Government would hear the views of those opposed to the regulations. The deputation was composed of Messrs John Bertram, John Waldie, and Ald. Scott, of Toronto, E. W. Rathbun, of Deseronto, and C. Beck, of Penetanguishene.

WHEN Wm. Milligan failed as a grocer here in 1894, John E. Casson purchased his Queen street stock, amounting to about $8,800 at 50 per cent. discount, paying one-third of the amount at the time of purchase. For a good while he did fairly well, but being ill for a considerable time he got behind in his payments. While we are writing a meeting of his creditors is being held and we are unable to say what is being done.——E. D. Gough, a clothier here, who has compromised several times, is in difficulty. A couple of writs amounting to about $2,000 have been issued against him. One of the writs is for $1,853.29 issued by Messrs. Laidlaw, Kappele & Bicknell, at the instance of E. Boisseau & Co., wholesale clothiers, 18 Front street east. The claim is made on a note for that amount which came due on August 18, but which was protested. At the present time Mr. Gough is ill at Belleville and unable to attend to business, so service of the writ was accepted by his solicitor. He has only been in business in Toronto since June last, running a clothing business on Queen street west. He also carried on a store at Belleville, but latterly has been endeavoring to dispose of this. There are not a great many creditors in Toronto, the principal houses interested being in Montreal. ——The printing establishment of Moore & Co., here, will be closed out by creditors.

REAL estate men in Winnipeg anticipate a most prosperous season, and state that many enquiries for town property are being received. There are but few good houses in the city unoccupied; the Crow's Nest line has taken all the idle laborers out of the city, and, all in all, they expect this winter to be the best the Prairie Capital has enjoyed for many a year.

THE quarterly report of the New Westminster, B.C., Board of Trade thus sums up the situation in the far West: With a brisk demand for lumber, and an unusually bountiful harvest from both land and water, added to the activity in mining operations, the season may be regarded as distinctly favorable in this district at least, and the financial stringency which has unfortunately been prevailing for some years, ought to be sensibly relaxed.

COMMERCIAL travellers, says the Winnipeg *Free Press*, who always have their fingers on the pulse of trade throughout the country, report business to be excellent. Some of them who have recently returned from trips to the coast say the whole West is in better shape financially than ever before; merchants are buying more freely and taking better goods than in the past. Improvement is noticed in every line from needles to traction engines.

TWENTY-TWO new locomotives are being procured for the western section of the C.P.R., according to the Winnipeg *Free Press*, including two compound engines for the mountain division. Ten of the new locomotives are of the Baldwin type, while the other ten are being turned out of the C.P.R. shops at Montreal, and will be equally distributed on the western and Pacific divisions. The traffic on the western sections of the company's lines has been very heavy this season, and at present many extra freight trains are necessary to carry east the large shipments of cattle from the North-west, and in the near future the new grain will command extra service to get as much as possible to lake ports before the close of navigation.

AN important meeting of representative business men throughout the United States will be held at the Hotel Manhattan, New York, next Monday, for the purpose of devising some plan for investigating fraudulent failures. For this and other purposes an organization known as the National Association of Credit Men, was formed some time ago. Its work will be on lines similar to that of the protective branch of the Bankers' Association. When the plans are completed it is expected that the association will have a lawyer in every section of the country to investigate promptly suspicious failures, and the association will also employ detectives to make the investigations thorough when it is thought necessary. Where fraud is discovered, the association will undertake the prosecution of the guilty persons, and in this way, it is thought, much better results can be accomplished than through the efforts of individual firms, which may be victimized by swindlers. When the association met in June last it passed a resolution in favor of the adoption of uniform statement blanks, and recommends to its members the employment of such form or forms, in obtaining signed exhibits from their customers as may be approved by the Board of Administration.

PARDO'S extensive stave mills at Blenheim, Ont., are announced to shut down owing to lack of timber.

DURING the first fifteen days of the present month there was exported from the Slocan, via Revelstoke, B.C., 440 tons of ore, of the value of $42,344. In addition to this, the Lanark mine, operated by the Lillooet Fraser River Company sent forward 131 tons, valued at $10,204.

MR. DAVID J. SELIGMAN, banker, died at Long Branch, N.Y., on the 27th inst. Mr Seligman was the eldest son of the late Joseph Seligman, and was the senior member of the banking firm which his father founded. The family has been famous both in mercantile pursuits and in the field of finance.

WHEN the steamer "St. Croix" of the International line pulled out from her wharf on Saturday evening, says the St. John *Sun*, she was drawing about 19 feet of water, and had the largest load she has ever had leaving this port. The cargo was not taken on board here, however. She had gone down to Eastport, and taken on 23,000 cases of sardines.

THE Winnipeg Board of Trade and Grain Exchange has received a request from the Fort William Board of Trade asking them to memorialize the Dominion Government with regard to improvements in the Kaministiquia River in connection with the turning basin for vessels. The Government dredge is at work there at present, but it would appear that no instructions have been issued regarding the work at any particular point. The board and exchange wired the Minister of Public Works, urging that every facility be given in connection with this most desirable work, in order to assist in the shipment of Manitoba's wheat crop this year.

MUSSEL mud digging at Oyster Bed Bridge, according to the Prince Edward Island *Agriculturist*, is quite a novelty. Mr. Macmillan, the postmaster at Cymbria, has built a floating raft or bridge. The ice in that locality is seldom sufficiently strong to allow mud digging, and as there is an immense quantity of mussel mud, it became necessary to construct a floating raft. The float is built on two hundred oil casks, and at high tide can easily be moved. The digger is built on the same plan as the ordinary digger, but instead of loading into a sleigh the mud is loaded into a car, placed on an elevated railway or tramway leading from the float to the shore. The car holds about a cart load, and is moved by hand to the shore and then dumped into a cart. They handle about fifty loads daily.

Mercantile Summary.

It is understood that the property of the Medway, N.S., Lumber Company and other allied interests have been bonded by an English syndicate.—*Gold Hunter.*

Messrs. Samuel, Benjamin & Co., Toronto, have recently been appointed agents for Morgan's celebrated English crucibles and will carry in the future a full line of these goods.

Farm lands around Winnipeg, says the *Commercial*, are slowly but surely coming into demand. The best farmers in the Winnipeg district now are men who have moved in from western points within a few years. While new settlers are going away west to secure land, farmers from western points are moving to the Winnipeg district. The attraction is owing to the fact that as Winnipeg is a large consuming market, farmers who market their produce here save the freight and commission which would be charged against the produce if shipped from a country point by rail. This is quite an item, amounting to about 5 cents per bushel on oats and other commodities in proportion.

In some parts of Manitoba, says the Winnipeg *Commercial*, evidently there is still great carelessness shown in carrying out the law regarding the destruction of noxious weeds. We notice by the last official crop report that more attention is being given to the destruction of weeds. This may be the case in some districts, but it is evidently not the case in all districts. It is not necessary to spend more than an hour or two driving out of Winnipeg to discover the most flagrant violations of the law regarding the destruction of weeds. In St. Charles district, the other day, the writer noticed whole fields of thistles and other weeds, now matured or rapidly maturing. There is nothing to be gained by cutting the weeds at this late date, as the seeds are about ripe. In fact some varieties, such as French or stink weed, were ripe some time ago, and thistles are now beginning to blow about with the wind.

The Canadian Pacific Railway has issued its statement of earnings and expenses for the month of July and also for the first seven months of the current year. The gain in net profits for July was $215,124.33 over the same period last year, while the increase from January 1 to July 31 reaches the enormous sum of $773,380.52 over and above what it was in 1896. The statement is as follows:

	July, 1897.	January 1st to July 31, 1897.
Gross earnings..	$2,107,002 22	$11,819,696 18
Working expense	1,192,643 35	7,238,143 81
Net profits....	$914,358 87	$ 4,581,552 37

In July, 1886, the net profits were $699,234.54. And from January 1 to July 31, 1896, there was a net profit of $3,808,171.45.

The master car builder of the Canadian Pacific Railway is reported by a Detroit dispatch as saying that orders for 1,600 cars have been placed with companies throughout the Dominion. Six hundred cars are also being made in the shops of the company at Montreal. "Times are getting back where they used to be," said Mr. Apps. "Prior to 1893 it was not an unusual thing for the Canadian Pacific to have many of its cars made in outside shops, owing to the limited capacity of its own works. During the last five years, however, we have had no difficulty in making all the cars for which we have use. The crops awaiting shipment along our route are heavier this year than they have been for a long time An immense number of cars will be used to handle the traffic."

The Ottawa *Free Press* states: "Certain purchases of real estate made within the last few days disclose the proposed route by which the Canadian Pacific Railway short line from Montreal will enter Ottawa. Considerable has been heard of the activity of the Ottawa and Cornwall road in 'spigoting' a route, and registering plans, etc. Meanwhile the C.P.R. has not been sleeping, and during the latter part of last week representatives of the company bought the right of way through the very land surveyed as the route for the Ottawa and Cornwall road. This latter company had decided on a route parallel with the Canada Atlantic from a certain distance outside the city, and recently registered their plans preparatory to giving the usual ten days' notice preceding expropriation. The route being the only feasible one in the territory mentioned, the C.P.R. authorities evidently came to the conclusion that they were about to get left, and decided on a scheme which somewhat takes the wind out of the sails of the opposition line. Expropriation being out of the question, owing to the start gained by the Ottawa and Cornwall road, the C.P.R. authorities set their purchasing agent at work, and to-day that company owns the route entered at the registry office by the other company. It was a master stroke of policy and came very high, but the route had to be secured, and it was paid for. Very quietly was the scheme worked, and the agent was evidently instructed to pay the price demanded. The people at Hurdman's Bridge say that the purchasing of the C.P.R. was done by a Mr. Morrow."

THE GURNEY FOUNDRY CO., Limited.,
TORONTO.
The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

THE inland revenue collected at the port of Montreal during the months of August, 1896-7, was :—

1897	$207,335 92
1896	193,905 49
Increase for August, 1897	$13,430 43

BENNING & BARSALOU, Montreal, auctioneers, sold on Tuesday, for Kent & Turcotte, curators' the stocks belonging to the following estates :— I. Vineberg & Co., at 63c. : Vineberg & Co., a. 60c., for Henry Barber, trustee, of Toronto; The stock of A. E. Loney, of Maxwell, Ont., at 6½2.

FROM a recent report, it appears that the exports of Austria-Hungary during the past year amounted to $327,350,000, and the imports to $303,650,000, being in both cases an increase over the corresponding figures for the previous year. There has been a considerable increase in the exports of manufactured goods, especially of textiles; but, satisfactory as this is, the country has enormous agricultural interests and there seems just now to be but slight prospects of a profitable outlet for the products of her cattle-breeding and husbandry. Last year the exports of live stock decreased largely in number and value. The egg trade has also shown a decline. The German agrarian agitation, a bad harvest, prohibitive measures against Austrian cattle, and Russian competition in the egg trade, are all suggested as causes of this state of things.

J. B. TYRRELL, one of the geologists of the Dominion Geological Department, is going to continue his work of exploration in the West. The immediate scene of his operations will be among the swamp lands in the north of Manitoba, that can be better worked in the fall, when the ground is frozen and before snow covers the ground.

THE president of the Winnipeg Board of Trade, D. W. Bole, had a conference with Mr. R. Kerr, traffic manager of the C.P.R., on Saturday last, in reference to freight rates to Kootenay points. It is said the conference was very satisfactory. Speaking of the existing tariff, Mr. Bole pointed out that the charges from Montreal to Winnipeg and from Winnipeg to the Kootenay were now the same as the through rate, plus a small charge for cartage, which was reasonable, and to that extent satisfactory.

—The British Consul's report on the trade of Yokohama during 1896, says: "The returns show the total trade of the port for the year to have been worth £14,632,382, being £7,948,637 value of imports, £6,683,745 value of exports. If there is added, as has been done in some previous reports, to the figures for imports deduced from the customs returns, a correction of 15 per cent. to cover approximately the amount of freight and other charges paid on those goods between the place of production and this port, we arrive at the sum of £9,140,933 as representing the actual value on the spot of the import trade and of £15,824,678 as representing the total foreign trade of the port. In 1895 the corresponding figures for imports were £6,780,448, and for the total trade £15,966,208. The figures for exports were £9,185,760. Last year, therefore, there was an increase of nearly 35 per cent. in the import trade over that in 1895, and a decrease of 27 per cent. in the export trade, and a decrease of about 1 per cent. in the total trade of the port."

THE SITUATION.

From Budapest has come, as it comes every year among the first, the estimate of the Austrian Minister of Agriculture of the world's harvest, compared with the world's wants, for the year. Ordinarily, it is counted among the most reliable. The year's yield of wheat, taken with the remnant of the last year's harvest, is put at 610,000,000 metric hundred weight, while the world's wants are 651,000,000, showing a deficiency of 49,000,000 metric hundred weights. The amount required for consumption can be arrived at with more certainty than the total yield; but consumption of wheat varies with the price. A high price of wheat would ordinarily make an extra demand for rye, but of rye the deficiency much exceeds that of wheat, being put at 193,200,000 of bushels, so that this resource is cut off. The next choice of a substitute for wheat is barley, and here again the deficiency figures largely, being 106,400,000 of barley, and 165,000,000 bushels of corn. Even oatmeal eaters cannot count on the usual supply for man and horse, the estimated deficiency being 162,000,000 of bushels. Of none of these figures can absolute accuracy be affirmed with certainty; but they are near enough to the truth to warrant the general conclusion that the harvest of 1897 is a short harvest, and that high prices of grain must rule.

The deficiency in the yield of all kinds of grain, on which mankind in Europe and America, at least, rely, makes the scarcity absolute; and when this happens prices of grain raise in a proportion greater than the scarcity, increasing at every step beyond the ratio of the deficiency. High prices, not only for one, but for all kinds of grain that will bear exportation, can be counted on, if the deficiency be anything like what the Budapest estimate makes it. The Canadian grain crop is fortunately abundant, and the country may well promise itself a year of prosperity, of which it has great need. The attention of Europe is being awakened to the fact that Canada will soon figure as one of the great wheat producing countries of the world. Settlers will turn to our shores and the grain crops will increase in an accelerated ratio. The change from rice to wheat as food among the Japanese will be retarded by the high prices of the year. It generally happens that when high prices for food grains rule, and Europe requires largely to increase the imports of these forms of food, that the stream of gold flows to America. But it is possible that, instead of gold, American securities will come from Europe, indirectly, in payment for wheat and corn. An unusually profitable export trade, in spite of the towering tariff wall, could scarcely prevent a considerable expansion in the import trade of the United States, as well as of our own, if the Republic had not imported so largely in time to avoid the new tariff rates. One year's high prices, with a good harvest, will not suffice to create overflowing prosperity, but they will come as a welcome relief, reviving hopes and giving new energy to enterprise.

The Jubilee ceremonies having become a matter of history, and Sir Wilfrid Laurier being in possession of the Cobden medal, the Premier's return from the scene of his European triumphs was the signal for the critics to take stock of the situation. With some Sir Wilfrid's receipt of the Cobden medal is a mortal offence. As a matter of fact he stands pretty squarely on the old Ottawa platform of a revenue tariff. Such a tariff is elastic, no doubt, as the wants of the country, and in reducing it to practical application a want of fair consideration for existing interests or of reasonable liberality of interpretation of the dogma cannot be charged. Even before the Cobden Club Sir Wilfrid Laurier made it plain that the existing system of protection had to be dealt with "gradually and carefully." Taken literally, this means a further release from protection, but in practice it cannot mean much for some time. The present arrangement, which contains a large measure of compromise, will no doubt get a fair trial. At the same time, the public will understand that a revenue tariff is the loadstone of the present Administration.

A certain demand has sprung up that the Canadian Government should work the Klondike mines exclusively itself. The example of Russia in Siberia is cited; but if Klondike is another Siberia, Canada is not Russia. Part of the Russian plan is to send political suspects, to whom no trial has been granted, and whose guilt is merely assumed, to work in Siberian mines. The working of some of the Klondike mines by the Government might be tried, on a limited scale, by way of experiment; but it would be a mistake to close this outlet for individual energy, especially as the placers offer to the poor man a chance which goes far to equalize his opportunities with those of the rich. A large number of individual claims have been taken up in that region with the privilege of working them out; the future is open to a new policy, if an improvement on the present system can be found. Rich mines, especially those of coal, now in the hands of any Government of the Confederation, ought to be sacredly guarded from the grasp of monopoly. It would even be desirable to try gold mining by the Government, in the Klondike district, but this experiment ought not to exclude individual or corporate effort.

During the week two large companies, intending to operate in the Klondike district, have been formed, one of them having its headquarters in New York, with a capital of $5,000,000, and several American millionaires for promoters; the other is launched in London, with Mr. Domville for chief promoter, and is backed up by Mr. Davies, a member of the Canadian Government; capital £200,000. The American company apparently intends to improve the means of getting to the gold fields. Under the new regulations it is difficult to see how such a company could obtain a sufficient number of claims to employ its energies upon;

but this difficulty is supposed to be got over by purchasing a number of claims, including a valuable timber berth from a Mr. Ledue, by whom they were acquired under regular tions more elastic than the present. The London company, with a strange inappreciation of the language it employs, announces in the prospectus that it intends "to utilize the influence and experience of Col. Domville." Of what does this influence consist? Since it is but fair to assume that it is innocent, we must exclude the idea of its being political; any personal influence he possesses, not political, he has a right to use. But there is danger that another meaning may be taken out of the announcement. This has in fact happened.

Preference, having to conform to the treaties containing the most-favored nation clause in which Canada was included, has led the Government further than it would have elected to go. But once it was announced as the opinion of the law officers of the Crown, that all countries having treaties of this character were entitled to preference, under our tariff, it became a matter of good faith and public duty to extend the privilege to them. This has been done. Our trade with some of these countries, now small, may be slightly stimulated, as a result; care may have to be taken that other countries not entitled to preference do not get it indirectly.

On the Indian frontier the area of the disturbance tends to increase, a British post in Beluchistan having been attacked and another threatened. The war waged by the tribesmen is of the guerilla kind: rapid movements have been made by a number of bands on weak positions, and some captures have been made; these successes have been followed by rapid retreats. No attempt has been made by the enemy even to hold the Khyber Pass. The attacks show design, concert, pre-arrangement. Whose head conceived the plan that has been carried out? The Ameer of Afghanistan has evidently been suspected, but besides protesting his innocence, he uses words of censure against the movement, protests and even swears that he favors the British cause. Haddah Mullah does not heed the words of the Ameer. He changes his plan of operations, but continues firm in his purpose and is said to intend to make an attack on Peshawar. The Grand Turk enthroned at Constantinople is curiously watching the moves on the Indian frontier, sending presents and messages to the Ameer. Meanwhile the British power in India is girding up its loins, and will strike a hard blow whenever it is possible to deliver one with effect. Delay is counselled by the necessity for effective preparation, but it would be dangerous if the belief gained ground in India that rebellion might have a chance of success. The fact that the assailants do not venture to try to hold the positions they have taken shows that they understand their weakness and know that they are incapable of achieving any permanent success.

Various interpretations have been put upon the treaty of alliance which has been made between Russia and France. Those concerned in its negotiation say it means peace; there are to be found French enthusiasts who say it means the restoration of Alsace and Lorraine. An attempt to procure the retrocession of these territories would mean war. We may be sure the alliance does not mean that any territory now German is to become French, merely to satisfy a craving desire on the part of France for *revanche* in that form. Germany is more or less jealous of the Franco-Russian alliance, but it is probable that those Germans who are behind the scenes do not feel that their country has special reason to dread that an alliance hostile to the Fatherland has been formed. The absence of any announcement of the purport of the treaty gives full rein to speculation. For the exact truth we must be content to wait.

THE EFFECT OF TRADE COMBINATIONS ON THE QUALITY OF GOODS.

It is alleged on behalf of manufacturers' agreements as to uniform prices that they have resulted in an improvement in the quality of the goods made by the members of the combination. Under conditions of competition there are two means by which manufacturers attempt to sell goods, viz., by their superior quality or their cheapness. In recent years Canadian manufacturers of many staples have turned their best energies to the production of goods that can be sold at low prices. While by the utilization of new processes of manufacture and new plant, or the discovery of new supplies of raw material an improvement in the quality of the product may take place contemporaneously with a reduction in price, this has apparently not been the case, as the complaint is almost general that these goods have not the utilities they formerly possessed. The reduction in price has evidently been made at the cost of quality.

It is argued that the price agreement removes the motive for making cheap goods, and if no other arrangement is made in the combination, and competition is otherwise open, the manufacturer must depend upon the quality of his wares to find a market. Quality, instead of price, becomes the recommendation of merchandise. The quality of the wares of the different producers must, however, be reasonably uniform or the agreement will come to an end. In the biscuit makers' combination the complaint was once made that the goods of one member were superior to those of the others, and as a result he was obliged to sell them at an advance of ½ cent per pound until the quality was reduced and adjudged no better than that of the products of other members of the combination. While trade combinations may improve the quality of goods, the tendency to improvement is restricted by the fact that uniformity in quality is essential to the maintenance of the combination.

If the combination extends beyond a mere agreement as to uniform prices and a selling arrangement is made which practically insures a market to the producer, the natural tendency is in an opposite direction, towards a carelessness in manufacture and a depreciation in the quality of the product. Where competition has been destroyed there is not the same incentive to utilize machinery which must replace at greater or less cost that already in use. Complaints have frequently been made that combinations and monopolies have deteriorated the quality of goods, but these have been seldom established in Canada. In order that a manufacturer can with impunity make goods of inferior quality, he must have not only a complete present monopoly, but must be secure against future competition. The Dominion Cotton Mills Company are the only manufacturers of print goods in Canada, but if the various samples are not of standard quality, the goods cannot be sold, as merchants will make their purchases abroad in spite of a considerable import duty, preferring to pay higher prices for better wares. It is the constant aim of this and many other monopolies organized in the same way to prevent merchants and consumers from turning to possible sources of supply or the use of substitutes, by a maintenance of the quality of the product. The effect of trade combinations on the quality of goods is by no means uniform and cannot be measured by general rules. Each instance must be determined by the peculiar circumstances and conditions which surround the combination.

BRITISH TRADERS AND THE CANADIAN TARIFF.

The British textile merchants, while thankful for the favored position given them in Canadian markets by the Dominion Government, have, according to the *Draper's Record*, two causes of complaint in regard to the provisions of the new tariff. Until August 1st, 1898, German and Belgian manufacturers have the benefit of the minimum tariff if the goods manufactured in these countries are "imported directly" into Canada. The effect of this provision is obviously injurious to the British wholesale merchants. The *Draper's Record* points out that:

> British merchants are able to buy in such vast quantities that they can command a price which enables them to resell the merchandise to small colonial purchasers at less than the latter could buy the same goods in the continental market. It is the recognition of this fact which has made the British metropolis the commercial emporium of the world. But this state of things will certainly not continue, so far as Germany and Belgium are concerned, unless the Canadian Customs authorities can be induced to abolish the regulation as to direct importation.

The present Canadian tariff bill has been introduced into Great Britain under peculiar circumstances. The Jubilee celebrations have been accompanied by innumerable banquets, and other festivities in which the fertile theme of discussion for the after dinner speeches has been the Canadian tariff. The addresses of Sir Wilfrid Laurier and Sir Louis Davis have been so complimentary that British traders have almost concluded that the sole object of the Canadian Government in passing the recent tariff law was to benefit them. Although the idea of a tariff preference was no doubt accompanied by a certain amount of sentiment in regard to our relations with the Mother Country, it was, in the main, a business proposition intended to benefit Canadian commerce. The provision granting a reduction of 12½ per cent. in the tariff to countries who give certain trade advantages to Canada has been made conditional upon direct imports with the view of bringing, if possible, the foreign manufacturer and the Canadian merchant in direct contact. The theory is that trade which is conducted by means of several middlemen is necessarily expensive, and the Canadian Government, in developing foreign trade, has sought to make it direct, and, from this point of view, profitable. Whether direct trade is necessarily the more profitable remains an open question; the following paragraph, however, from the *Draper's Record* goes to confirm the position taken by the Canadian Government:—

> It will doubtless be argued that the new conditions of German and Belgian trade which our merchants and shippers are likely to find so disadvantageous are only to last for a year. That is so, but much injury may be done to the British transhipment business in that period, short as it may seem. Canadian houses are to be compelled to buy their German goods in the country of origin, or forfeit 12½ per cent. on their cost. Having found out the German markets and got accustomed to trade there, will it not require a great effort on the part of British merchants to win back their customers to London after August 1st, 1898? And, however great the effort, is it likely to be more than partially successful?

A danger of the new tariff law which has evidently been quite apparent to the Canadian Government, is that in purchasing from British warehouses, where goods are collected from all the manufacturing countries of the world, commodities made in foreign countries may be imported by Canadian merchants under British name at the minimum tariff. Elaborate provisions have been made to protect the revenue of the Canadian Government. It is provided that

> "Persons making entry of goods under the Canadian reciprocal tariff of 1897 are required to furnish a separate invoice of the articles entitled to such entry, with a declaration annexed thereto from the exporter or his agent, made before a notary public or a commissioner for taking oaths, or the chief municipal officer of a city or town, or a British consul, or before the president or secretary of a chamber of commerce, as to the origin and value of the article,"

in a certain prescribed form. This method of entering goods is characterized by the *Record* as "most annoying and burdensome, apart from the expenditure involved, which, though small in each instance, will amount to a good deal in the aggregate. Already, we understand, the inconvenience has been felt, and privately protested against by several merchants; but what is wanted is immediate concerted action for the purpose of inducing the Canadian Government to withdraw the obnoxious regulation." One of the disadvantages of a tariff law is the complications which it adds to trade. Considerable expense and annoyance will, no doubt, be caused by this provision of the tariff, but the evils will probably become less as exporters become more familiar with the new regulations. It would, at all events, be idle to ask for a repeal of the clause without suggesting an equally effective method for protecting Canadian interests.

ASSESSMENT INSURANCE.

The disastrous failure of the Massachusetts Benefit Life Association, to which we made extended editorial reference last week, gives rise to the question: Is the failure to be taken simply as an indication of bad management on the part of the officials of the company, or was it due to an inherent defect in the system upon which the association was based? While bad management may have been the proximate cause of the final collapse, anything but a superficial view of the circumstances will reveal a deeper-seated cause of failure. The Commissioner of Insurance for the State of Massachusetts was recently asked in regard to the failure, "Do you think the association would have been all right financially if the policy-holders had all paid the last assessment that was demanded?" He replied emphatically, "No," and with great earnestness he continued: "The result would have been exactly the same had every single policy-holder paid all his assessments up to date. *The whole system is wrong.*"

Commissioner Merrill's answer strikes at the root of the matter. The repeated announcements of the failure of assessment companies are not individual instances of bad management, but form a connected chain of events, which go to prove the fallacy of the idea upon which they are formed. The Life Insurance Report for 1897, issued by Superintendent Payn, of the New York Department, shows that since the assessment insurance law of that State was passed several years ago, 233 assessment organizations have ceased to make statements to the Insurance Department, and hence, under the law, have ceased to transact business in New York State, or passed into the hands of the receivers.

Many of these companies have dropped out of existence without exciting much comment. The sufferers have been largely of the poorer classes, who are not in a position to make their wrongs known. The State in framing banking legislation acknowledges its obligation to guard the interests of men and women who are not expected to understand the principles of finance, and has taken stringent precautions to protect small depositors; there is much to be done, however, before policy-holders receive the same consideration at the hands of the Government.

There are numerous assessment companies doing business in Canada who are not able to make as respectable a showing in the matter of reserves as the Massachusetts Benefit Life made when competing for business. In the opinion of Commissioner Merrill, the four hundred families of deceased members and beneficiaries under matured certificates of this company will "be mighty fortunate if they get fifty cents on the dollar." Is it not the duty of everyone contemplating life insurance, to think seriously before taking the chance of a contribution to the immense sum of money that has been lost in experiments with "assessment life insurance"?

THE WAGE QUESTION AND THE SHOE FACTORY.

No economic question has attracted within recent years more attention from writers than the problems of Labor and Wages. Professor E. K. Gonner, in delivering the annual presidential address to the Economic, Science and Statistics Section at the recent meeting of the British Association in Toronto, remarked: "What may be termed the bias of economic studies is very evident. Just as at one time the balance of trade and commercial relations with foreign countries, and at another currency schemes and currency iniquities pervaded the atmosphere, so now Labor and the Labor Question, and writer after writer struggles beneath its fascination, helpless in his efforts to avoid its introduction in every part of his work, suitable or unsuitable." In spite of the volumes printed for the purport of showing the relation between capital and labor, the principles of this question are little understood. Labor leaders have again and again failed in their attempts to improve or maintain the conditions of workingmen through ignorance of economic laws.

The history of shoe manufacturing, in Toronto, contributes an interesting chapter to our knowledge on this question. Not many years ago there were five or six busy shoe factories in this city employing large numbers of men and women. At present there are only two firms in Toronto who manufacture shoes by factory methods. The shoe trade of Ontario has passed to the Province of Quebec. The Western manufacturers had as good advantages as their Eastern competitors in the matter of plant and raw material; they were as near the centres of consumption, but lost ground through the greater cost of labor. Wages in Montreal were twenty-five per cent. lower than in Toronto, and the difference which this entailed in the cost of producing shoes was a serious handicap upon the industry in Ontario. When the situation was explained to the working men, and their co-operation asked in retaining the shoe industry in the West, their answer was, "No reduction; the rate of wages must be maintained." As will be remembered, strikes followed, to be ended by a compromise. For three years the shoe manufacturers of Toronto who did not abandon the field have been sacrificing their profits to the mistaken ideas of the trade unionists. At present the rate of wages paid Toronto shoe operatives is five per cent. higher than that of Montreal, and fifteen or twenty per cent. in advance of the Quebec wage schedule. As a consequence, the Quebec manufacturers have in recent years made greater progress than their competitors in either Montreal or Toronto.

What has been the effect of the action of the trade union upon the interests it sought to protect? The majority of the shoe operatives have been compelled to leave the city, and those who remain working at a comparatively high rate of wages, earn, it is asserted by competent authority, a smaller aggregate wage during the year than the Quebec operatives. The Western operative employed on the higher schedule finds employment for only part of the year; in some cases he is obliged to work at several operations, and in this way the real wage benefit of the West is less than that of the East, where the operatives have steady employment. If a rate of wages in harmony with that paid in the Province of Quebec could be obtained in Toronto, there is every reason to believe that the shoe industry of this city would revive, and instead of manufacturers being compelled to confine their operations to fine work, all grades of footwear could be turned out with increased returns to both labor and capital.

PHOTOGRAPHIC SURVEYING IN CANADA.

Not a few interesting things were brought out by the meeting of the scientists in our midst last month. Interesting in a general sense, as well as in particular directions, but yet often unknown to the great mass of the public, though of decided value to the country. One of these is the extent to which use has been made of photographic surveying in the laying out of great prairie stretches. This method has been employed in the Dominion surveys to an extent far surpassing any other country. This we learn from a paper by E. Deville, Surveyor-General of Canada, in the British Association Hand-Book for 1887. The matter attracted the attention of German and Austrian savants at the August meeting, and even Americans and Englishmen were amazed at the progress of Canada in this direction. A brief description of the results may be of advantage:

The application of photography to surveying was first employed here in 1887, when the surveys of Dominion lands were extended to the Rocky Mountains. In the prairies of Manitoba and the Territories the operations of the land surveys are limited to defining the boundaries of townships and sections; these lines form a network over the land by means of which the topographical features, always scarce in the prairies, are sufficiently well located for general purposes. In passing to the mountains, says Mr. Deville, the conditions are entirely different. "The topographical features are well marked and numerous; the survey of the section lines is always difficult, often impossible, and in most cases useless. The proper administration of the country required a tolerably accurate map, and means had to be found to execute it rapidly, and at a moderate cost. The ordinary methods of topographical surveying were too slow and expensive for the purpose; rapid surveys, based on triangulation and sketches, were tried and proved ineffectual; then photography was resorted to." Precedent was not wanting, for in 1849 or 1850 an officer of engineers named Laussedat had used first the *camera lucida* and afterwards photography to portray landscape in Europe.

A survey of any kind, as our readers know, is made by measuring angles and distances. An accurate plan can be prepared from angular measurements alone, but it is not complete, as the Surveyor-General reminds us, until the scale has been fixed by measuring one or more distances. The role of photography is to dispense with angular measurements on the ground they are deduced from the photographs. A large portion of the work is thus transferred to the office instead of having to be executed in the field, where the expenses of a survey party are considerable. Thus the element of economy entered into the transaction, for doubtless many tens of thousands have been saved to the country by the application of a less expensive mode.

"On the Canadian surveys, a primary triangulation is first executed by the usual processes: then comes the photographic surveyor. His equipment consists of a three inch transit theodolite, and two cameras, one for himself and one for his assistant. With the theodolite he locates

triangles where ne-
at least one well de-

rveys were confined to
inity of the Canadian
that year, they covered
e same year an Interna-
was appointed to examine
ary between Canada and the
of Alaska. The Canadian com-
missioner, Mr. F. W. King, decided to carry out his share of the work by photography. In 1893 and 1894 his party surveyed about 14,000 square miles.

In still another direction photometric work has proved very serviceable. In 1894 irrigation surveys were commenced in the south-westerly part of the North-West Territories, where the rainfall is not quite sufficient for agricultural purposes. In addition to the gauging of streams, the establishment of bench marks, etc., it is necessary to ascertain the "catchment" areas, as the surveyors call them, and to define the sites best adapted for reservoirs. For this purpose, says the author, photography has again been resorted to in the foothills, and on the eastern slope of the mountains, and it has in this case, in the opinion of experts, a decided advantage.

OUR EXPORTS OF FARM PRODUCTS.

The Canadian Commissioner of Agriculture and Dairying, Professor Robertson, has returned from a trade mission to Great Britain, and gives an unusually interesting account of the condition of the export trade in different farm products. That Canadian cheese is holding its own in British markets has been apparent from the export statistics. We naturally feel very proud that in matter of quantity the Canadian dairymen are the principal exporters of cheese to the markets of the United Kingdom. But it is not yet time to rest upon our laurels, for, as the commissioner points out, the finest English and Scotch cheddars bring in the wholesale market fully four cents a pound more than the Canadian cheese. There is room for Canadian butter makers to profit at the expense of Danish dairymen, whose methods on account of alleged unsanitary practices is coming into bad repute in the United Kingdom. The exportation of bacon, poultry and eggs from Canada is increasing as the result of better knowledge on the part of shippers as to the requirements of consumers. Arrangements are now in progress for trial shipments of the Niagara district fruit by means of cold storage to Great Britain.

The primary object of Professor Robertson's visit to the United Kingdom was to assist in opening up markets for Canadian dressed beef, and the part of his report dealing with this subject is most important. In the past, Canada's contribution to the meat supply of the Mother Country has been by way of shipments of live cattle. The cost of shipping cattle across the Atlantic is in itself considerable, and when to this must be added the costs of long inland shipments by rail from the North-West Territories to the seaboard, for instance, it will be seen that high prices must be realized to cover the bare expenses of exporters. By shipping fresh dressed meat instead of live cattle there would be an avoidance of the shrinkage in weight resulting from the long journey. The tallow would not be discolored as it is under the present system of trade. There would be no bruising, with the consequent damaged appearance of many quarters, from cattle shipped alive. The cold storage arrangements which have been provided for trans-Atlantic shipments by the Government have made possible this trade in fresh meats. According to the Commissioner the chilled beef imported into Great Britain from the United States is not fetching wholesale as high prices by the quarter as the beef from the steers which are imported alive. In the retail butcher shops, however, the beef from the steers imported alive from Canada and the United States, and the chilled beef from the United States, are often sold indiscriminately with the beef of home-fed cattle. It is quite apparent that Canada's interest lies in a development of the exportation of chilled beef, which trade may be the means of materially adding to the wealth of the country. We welcome Professor Robertson's conclusion that "it is only a question of a short time when the retail butchers will pay for chilled beef arriving in England in the best condition a price equal to, if not higher than, the price they will pay for beef from the abattoirs there."

DRY GOODS CONDITIONS.

Many traders may learn a lesson from the milliners. The present week has brought representatives from the retail millinery houses in different parts of Canada to Toronto, and in a few days Montreal will be the scene of a similar visitation. It is almost impossible to exaggerate the importance of traders visiting in person the markets in which they make their purchases. The personal contact with the heads of the wholesale houses, the opportunity to compare the stocks of different merchants, the better opportunities afforded by personal inspection of the goods, instead of being confined to samples, and a number of other equally important advantages, all contribute to emphasize the importance of personal attendance on the markets. The millinery firms report excellent results from the openings and the houses are thronged with buyers.

The staple dry goods houses have shared in the benefits of the trade that has been brought to Toronto. But there is back of the millinery openings, the Industrial Fair and the cheap railway rates, a deeper seated cause of improved business conditions. The basis of the country's prosperity is agriculture, and the favorable crop reports from all parts of the Dominion have been received as heralds of returning good times. The revival of trade with Manitoba and the North-West Territories is not the least encouraging feature of the situation. A wholesale dry goods merchant, who is usually conservative, says that at the present rate of improvement his house will have in the present autumn the best trade in ten years time.

For the past five years the dry goods interests of Toronto have suffered severe depression. The record of failures, compromises and economies, which is all too well known to the public, bears evidence of the struggle that has been taking place. If "good times" are here at last they come none too soon. Confidence and Caution should be the motto of every merchant. The industrial conditions all point to a return of profitable commerce, and confidence in the future of the country will assist in the revival of trade vigor. The experience of the past, however, shows the need of caution, and its exercise need in no way conflict with the possession of a spirit of confidence. As has been said in regard to the return of prosperity: "We want nothing sporadic, nothing sectional, no prosperity of a class, but general prosperity, prosperity not only for the banker, the merchant, the manufacturer, the farmer, the mechanic and the laborer; in a word, we want prosperity which will reach out and touch every section, industry and business in this great country."

FRATERNAL SOCIETY INSURANCE.

If people desire, as thousands manifestly do, to form themselves into societies like the Odd Fellows or the Sons of Temperance for charitable work or for purposes of amusement, nobody need object. And if they promise funeral benefits (and can pay them), well and good. But when such organizations profess, by means of a certain contribution made by the membership at large on the death of a member, and thus assume the responsibilities of life assurance companies, they should stand on the same level before the law as such companies.

The Insurance Commissioner of California considers that the exemption by law of such societies from State supervision opens the door to gross frauds. Secret societies and fraternal orders ought to be examined by proper officials to see that the rights of members are conserved, inasmuch as it is by the authority of the law that such organizations come into existence. Says the Commissioner:

> The organization of secret orders under the law is a farce and a fraud. I investigated cases personally, and was shown by members of the society the fence corner on the ranch or place in the road where they were met by the "brother," and where the sign, grip and password were given, constituting them a member of a secret organization, in order that an application might be made for membership and insurance in "The Ancient and Honorable Order of the Bluejays." I succeeded, as I said before, in breaking up several of these alleged secret orders; but why the State desires to keep on its statute book a law that not only permits but encourages the organization of such frauds, and for the suppression of which it must annually appropriate money, is a problem in statecraft I am unable to solve.

In the course of the argument it is pointed out that life insurance is quite as intricate a business to understand, and as difficult to manage, when the head of the institution is called president as when he is called brother, chancellor, high and mighty councillor, or most reverend and distinguished patriarch. "The boards of control are composed of men—plain, ordinary citizens—with no more honesty, ability or insurance knowledge than average men generally have. But the worst feature of this section is that it permits the organization of societies for the sole and express purpose of doing an insurance business and evading the law. By this means the State renounces, voluntarily, the very security that it intended to give her citizens, and takes away all protection from thousands of poor and ignorant people." Urging that the law should be revised so as to compel supervision of these orders, the superintendent concludes by saying that while there are in California 20,000 citizens, paying annually hundreds of thousands of dollars to licensed companies, who should have their interests better protected than can be done under such a statute, there is, perhaps, as great an army in the various "orders" that, in his opinion, would be benefited by placing some wholesome equitable restraint on the insurance business done by them.

AUTUMN MILLINERY.

The wholesale millinery houses of Toronto are bright this week with their stores of new millinery for the autumn season of 1897. The stocks that have been purchased by merchants for the trade from the first day of the opening, Monday, found favor at the hands of retailers. One prominent house asserts that after the first day's business their employees were compelled to work until midnight bringing forward new stock for Tuesday's display. There has been the usual good demand for walking hats and sailors. In shapes, turban effects running to the Toreador style, have been popular. The purchases of pattern hats were never larger than during the present season.

The Jubilee celebrations have left their effect upon the millinery trade. We are to have several hats which in name, design and shades suggest royalty. The "Victoria" polk is a large hat with a big flare in the front, a sequin crown, around which are placed tips arranged to fall on the hair in the back. The "Jubilee" hat, a model formed of Lyons velvet, with chenille edge, is very attractive, showing a prettily-arranged combination of green shades. A feature of this hat and many others of the new season's styles is the number of long plumes which fall gracefully over the shape. Although hats are both large and small, the preference is given to large hats. "Picture" hats are shown and are received with considerable favor.

The adherents of the Humane Society and all lovers of birds will regret that birds and bird effects are popular materials for trimming the new season's headgear. Large natural birds, like the sea-gull, are principally used. The preference shown for these birds may be taken as another indication of large hats. Agate ornaments are a new and very pretty feature of the trimmings. They are of French manufacture, and some-

what expensive. Brill he is obliged to work at several
fashionable. Although way the real wage benefit of the
dom used extensively as of the East, where the operatives
nesses even a less quantit If a rate of wages in harmony
the rims of the hats millin vince of Quebec could be obtained
tips, and mounts of velve
and straight-wing effects y reason to believe that the shoe
where prominent. The revive, and instead of manu-
and widths ranging from 16
of velvet, velveteens, and velvo confine their operations to
ming purposes. The hats of the could be turned out with
judge by the models shown this week be
called plain. The new shapes and trimmings are such that the milliner will be called upon to exercise the full knowledge of her art, and, as a consequence, the millinery of 1897 will be expensive.

The season's colors are so bewildering that it is with extreme diffidence we venture to select the "leaders." The blue shades, whether the mistral or the bleu royal, are popular. As becoming a Jubilee season, purple is prominent, under the names of eveque and thais. The various shades of green, myrtle, Nile, palmier, moss, hunter's and apple green, are all seen on the autumn hats. But of all the colors none have found favor equal to the new castor, which in light and dark shades merges into a brown. Felts of this color will be much in demand, also velvet and silk goods for covering shapes and for trimming, as well as all sorts of plumage and ribbons. It is a color that, if it takes at all with the public, is bound by the nature of things to become very popular, being generally useful and suitable to all sorts and conditions. Charming combinations are made by mixing one or two shades of castor with beige. These are among the latest models in the millinery market, and recent advices from Paris state that they have superseded the harmonies in gray which so much took the fancy of the buyers who were earliest in the field.

THE PULP INDUSTRY IN NEW BRUNSWICK.

There is every prospect that the next decade will witness great developments in the wood-pulp industry. As this journal has frequently pointed out, the wealth of natural resources which Canada possesses are calculated to place this country in the front rank of wood-pulp producing countries. The St. John *Sun* has recently investigated the subject, coming to the conclusion that "the manufacture of wood-pulp is one of the industries natural to Eastern Canada. We have in this province probably the best supply of raw material to be found in the same area anywhere in the world. This material is so placed that the cost of transportation to the mill is as low as it can be under any possible conditions. As a third element in the case, pulp can be shipped direct from the place of manufacture to the market over sea. The demand for paper material constantly grows, while the supply of wood in other countries grows ever less. It seems to be certain that if paper continues to be made from wood, New Brunswick must be a great place for pulp mills. So far we have no such establishment on the southern coast of the province, but a conversation reported elsewhere contains some interesting suggestions in that direction. Mr. James Beveridge, a practical operator, who is now engaged in perfecting the machinery of one of the pulp mills at Chatham, thinks well of the project of manufacturing pulp in connection with the large saw-mills in the neighborhood of St. John. Mr. George B. Cushing, whose firm is known as one of the most successful and enterprising of those engaged in the lumber industry on the St. John River, would be disposed to undertake the business if only the question of water supply can be solved. The idea is thrown out that the city might in connection with its west side water service, arrange to provide water for this pulp enterprise. The plan is worth considering in view of the prospective improvements in the west side water service, and of the possibilities of the pulp industry in this neighborhood. Of course, it would be necessary to learn what would be the requirements of the pulp mill, and what the extra supply would cost. But this information could be readily obtained.

—The Board of Directors of Molsons Bank have declared a half-yearly dividend of 4 per cent. and a bonus of 1 per cent. upon the capital stock of that corporation. This dividend is payable on and after October 1st.

THE TORONTO INDUSTRIAL FAIR.

The Exhibition is open for 1897, and the usual ceremonies have been gone through with. People in uniform, dignitaries, local swells and invited guests from the country made an eminently respectable crowd on Tuesday last in the region around the grand stand, leaving the machinery hall, and the main building and the musical annex and carriage building free for such as me. Not being a connoisseur of cattle nor an authority on horses, the rows of stables need not be visited. We understand our readers to be more interested in the evidences shown here of progress made by the country in such directions as machinery, electric power, manufactures, vehicles, dairying, labor-saving appliances, and the like.

Most exhibitors, or perhaps I should say the chief or more enterprising exhibitors in the industrial department of the Industrial Fair, aim to secure the stands in the centre of the Main building. This they do because it is an area into which people throng from three points of the compass, east, west and south; also perhaps because it is on the way to the picture gallery. To-day a Hungarian band is playing wild music in the gallery, where used to be a fountain, and the colored streamers produce an effect of many-colored sunlight in the place.

Shrewdly enough the Steel Clad Bath Company has chosen its temporary show just here, having fitted up a modest but tasteful bath-room, with its central shower and its supplementary inviting baths, large and small.

Mr. Larkin's Indian temple, near by, deserves a word of praise for its neatness, and to the southward James H. Rogers attracts the eye of every female visitor with his inviting show of furs and fur garments. Following the fashion which was noticed in these columns a year ago, the St. Lawrence Starch Company, of Port Credit, has established a neat kiosk, glittering with gold and glass, while next to it John Taylor & Co. are able to surpass it in appearance by a judicious arrangement of their perfumes in crystal bottles with a color scheme in which gold and purple are predominant.

At the north-west angle stands what might be regarded as a fort, the outworks of which are formed of piles of fire engine hose, factory hose, farm hose, garden hose; rolls of belting, stacks of packing, cords of mats, the product of the Canadian Rubber Company. A single silent sentry sits in stillness at an angle of the fort, to welcome customers, but to frown away impertinent enquirers. In the centre is a citadel of glass, only to be penetrated by boot and shoe dealers, for it contains samples of rubber shoes, rubber boots, rubber slippers, gaiters, tennis shoes. What is in the magazine one can only speculate upon, for we did not penetrate that. It might, however, be found to contain the hundred and one appliances of rubber for the household, the drug store, the hardware shop that this well-known company turns out.

Looking northward from the south door of the Main building, one sees an expanse of wall glittering with steel of circular and other forms of saws, etc. This is the display of R. H. Smith & Co., Limited, St. Catharines, who temper their goods by the Symonds process. The circular saw of the present day, with its circlets of purple steel set into every tooth, or more properly, forming every tooth, is a work of art as well as a triumph of ingenuity.

The new house of Christie, Brown & Co. is no longer a mere verandah, or a series of shelves, or a decorated wall, but a cottage, done in robin's-egg blue, with mouldings of gold The greys and browns of their biscuits, in hundreds of crystal jars, make a pretty contrast. A mirror is generally found to be an attractive notion for a booth—we do not say for ladies only. The Crown Mfg. Company, of Toronto, are serving their cocoa and chocolate in a cosy booth at the west end, with huge mirrors that make the neat young women attendants appear more numerous than they are.

In the north corridor is an exhibit of typewriters, by the Creelman Bros.' Typewriter Company, of Georgetown, who make three kinds, with distinctive names. And in the north-west corner a noteworthy variety of woodenware is shown by the Wm. Cane & Sons Mfg. Co., Limited; interior decorations and carvings, blinds and mantels, as well as household implements and materials.

Alongside the picture gallery we found the Toronto Carpet Mfg. Co.'s display, which was in so dark a place that but for the electric light it could not have been seen. Here are many specimens of ingrain and Axminster carpets and rugs. The Alexandria Axminster carpet claims very great durability, having an all-wool face, with a wool back. We are told that it is ordered freely for churches and ware-rooms, as well as for private use, because it wears so well. This particular grade has been before the public only two years. This is the company that had the grace to present the Canadian volunteers' house at Bisley with a carpet for its floors, and a fac-simile of this is to be seen among its exhibit. Canadian marksmen are looking for it, as a something that will be both a hope and a reminder—a reminder to some, a stimulus to others.

In the north aisle the Canada Paint Co. have a display of colors and varnishes, which would attract more attention if it were in a better light. Among their specialties is the diamond graphite structural iron and steel paint, of which we hear good accounts, and the amberite spar varnish. It is worthy of note, too, that the Aird-Felch yacht and boat composition, made by this company, was used to paint the international boats, the "Glencairn" and "Canada," whose owners speak highly of it, and well they may. Everything helps in a yacht race, and even a special wind and a cleverness of a Duggan or a Jarvis may not have been able to pull off the races they won from the Americans on Lake St. Louis and Lake Erie, if their boats had not been in good trim alow and aloft.

Having discovered that there are latter-day Athenians. looking for novelties, among the crowds that throng the Main building, Messrs. J. S. Hamilton & Co. have heightened the interest of their exhibit of wines by showing two original pictures, dated 1832, one of Toronto from the Bay, and the other a view on King street, looking east. Their St. Emilion, St. Augustine and Catawba wines, made from Southern Ontario and Pelee Island grapes, are still commanding attention and respect from wine-drinkers.

The floor of the room railed off by M. Staunton & Co., at the south-west angle of the ground floor, is not papered, but walls and ceiling are covered with self-colored centre and frieze effects. Then on stands there are blue, biscuit, terra cottas, greens, greys and chocolates, arranged in tasteful succession. These are modern goods and modern patterns. Blue and gold goods of large and free scrolls, and a deep crimson background flowered with gold for a hall or library, are features of the display. All of which show the ability of the company to turn out beautiful work both in design and execution.

TRADE WITH MEXICO.

Trade between Canada and Mexico has, in the past, been confined within the narrowest limits. The products which would naturally be sent from this country to Central America are also to be had, for the most part, in the United States, and having the advantage of situation, American manufacturers have been able to intercept this trade. While professing commercial friendliness to Mexico and the Central and South American Republics, the United States Government has passed, in the Dingley Law, legislation which is distinctly injurious to their commercial interests. The question then arises, can Canada, profiting by the mistake of her neighbor and competitor, offer sufficient advantages to Mexico and other states in Central and South America to create a profitable foreign trade with them?

A report has been recently received from Mr. E. E. Shepherd, a Canadian trade commissioner, as to the commerce of Mexico. It is the opinion of Mr. Shepherd that although the industries of Mexico are protected, there are certain channels of commerce open to Canadians. The Germans have nearly the whole hardware trade, making a specialty of the Mexican market. But in spite of this, there is said to be an opening for Canadian shovels, picks, axes, hoes, forks and the higher grade of hand implements. Canadian carriage manufacturers should be able to export their goods to Mexico, while for farm wagons there is every prospect of an active demand. There is some chance of a trade in bicycles, but at present the market is supplied with United States wheels. Mexican agriculture is, as yet, in a very crude stage, and Canadian machinery is not at all suited to the ideas of the farmers of that country, but in the event of progress the Canadians should obtain a share of the trade, as they are already able to compete in neutral markets with the manufacturers of other countries.

Timber and wooden wares offer apparently the best prospects of trade. Mr. Shepherd points out that "The timber question is an important one. Some of the railroads use steel ties because timber is so scarce. For the first time in many years pine shingles are being imported in large quantities. The import of lumber in 1896 was valued at over $2,000,000 in gold, as against $600,000 the year previous. While the machinery for manufacturing lumber must be in great demand in Mexico, the lumber exporter must also find a good market in Mexico. Those who wish to obtain their fair share of the trade should immediately set about capturing it." There is every reason to believe that Canadian furniture could be exported to Mexico at a profit.

In catering for this and other foreign markets Canadians should remember that it is of prime importance to find out the needs of consumers. Furniture, hardware, carriages, and other commodities which it is proposed to export may be quite suited to Canada, and yet be quite unserviceable in Mexico. It should be the first work of the intending exporter to make enquiries to this end, and find out to what extent, if any, he needs to change his products to meet the requirements of a new market. Mr. Shepherd makes what may be a good suggestion in saying that "If the manufacturers and exporters of Canada who are interested in obtaining a share of the Mexican market were to unite together and form a permanent and co-operative exhibit in this city, the business of the whole Republic could be reached with but little expense, and the articles exhibited would be continually under the eye of men representative of the buying classes."

"THE SPECIAL SALE."

That the "special sale" has its place in the dry goods trade seems unquestionable, but that it has been carried to an excess, resulting in injury to mercantile interests, is almost as certain. The present time, when the summer season is all but closed, and the autumn season scarcely opened, is taken as an opportunity for the disposal of stocks that have proved slow sellers. This operation should be conducted with great caution. The *Dry Goods Economist*, in treating of the matter, says:

"If it is decided that a special sale shall be held it is most important that everything about it shall be of a character to elevate the store in the mind of the public. It is easy to create a bad impression by blatant, screaming advertising that claims everything, by counters crowded with cheap and dowdy merchandise, and by clerks who assume special-sale manners of an extra offensive nature. At the special sale everything should be done to remove all appearance of cheapness, except on the price tickets. The goods should be made to look as attractive as possible and a few "sweeteners" should be added where assortments are very much broken. Let the reason for disposing of the goods at special prices be frankly stated, so that no ill feeling will be aroused when the time comes to go back to regular quotations. Customers are very apt to feel aggrieved when they find goods higher to-day than they were yesterday, and the special sale in such cases may do more harm than good. This, of course, applies only to special sales of seasonable goods and not to clearing sales, which, by the way, are the best and safest kind of special sales. They have a natural, reasonable ground for existence—which the mere special sale has not—and they are pretty sure to accomplish their object without proving a boomerang. Honest clearing sales, held only at distant intervals and conducted on a broad and elevated basis, are a legitimate method of merchandising, and will benefit most kinds of stores, while fakey-looking sales will injure any business, big or little."

PROGRESS IN THE WEST.

There are numerous avenues in which the energies of the new Dominion Government may be well directed, but none offer greater opportunities than the Department of Emigration. Canada has the territory to support a population more than twice its present size, and every effort should be made to fill up the vacant lands with an industrious people. A population of ten million people would do much to set aright many of the difficulties which to-day embarrass Canadian trade. We are apt to be disappointed with the progress made in the settlement of Western Canada. When the Canadian Pacific railway was built many optimistic predictions were made as to the colonization of the West, and because all the sanguine expectations then formed have not been realized, we are inclined to overlook the considerable headway made in settling the Western prairies within a comparatively few years.

Sir Donald Smith, in an interesting paper on Western Canada, read before the Royal Colonial Institute in London, on April 13th, says: "The thirty years that have elapsed since Confederation have wrought wondrous changes in Manitoba and the North-West. The vast plains, with their waving prairie grass and patches of brilliant coloring, formed by the many varieties of wild flowers and fruits indigenous to the soil, are no longer the solitudes they were. Instead of being uninhabited they now provide homes for nearly half a million people. The prairies are dotted here and there with farm houses, and in the summer time fields of golden corn stretch as far as the eye can reach. In place of the buffalo that formerly roamed the plains, there are now thousands of sleek domestic cattle, bands of horses and numbers of pigs and poultry. In the early days there were hardly any settlements, except round the Hudson's Bay posts, at Fort Garry and Portage la Prairie. Thriving towns and villages are now scattered all over the country, and there are over 3,000 miles of railway in operation. The only industries in pre-Confederation times were those in connection with the export of furs and the import of articles needed by the Indians and a few settlers. Now wheat and flour are exported in large quantities, and bring the highest prices in the markets of Canada, the United States, and the United Kingdom."

THE COFFEE CROP.

Messrs. W. H. Crossman & Bro., New York, have issued to their customers a general circular dealing with coffee crop conditions. In part it follows: The present crop is estimated by conservative firms at 4½ millions minimum for Santos and 3½ to 4 millions for Rio. We have no doubt that the Rio and Santos crops together this year will be about the same as last, if not more. As regards the outlook for the growing crop, there is no doubt that the immense number of new trees commencing fruit-bearing for the first time, will swell the possibility of a larger production. Everything so far points to the largest crop ever raised, but then it is entirely too early to reach any conclusion. In many quarters it has been currently reported that present prices are the lowest ever known, and that there is a probability of a quick turn the other way. In correction of this statement we beg to say that everybody familiar with the trade ought to know that lower prices than the present ruled in 1882, when New York options sold below 5½ cents, and Havre below 40 francs, and besides, the quality of good average in Havre was then fully 15 per cent. better than now. These prices lasted for about three and a half years, being interrupted for a short time by a Brazilian syndicate, which in the end failed disastrously, notwithstanding the 1883-1884 crop (in which it attempted to control the markets) was a small one, only 5,050,000 bags. We mention this fact, as even a small crop did not help values, even if backed by a heavy syndicate of Brazil, when actual stocks were nearly as large as they are now. The now current talk about putting up prices quickly in the face of supplies that were never heard of or dreamed of is therefore somewhat too hopeful.

A DECLINING INDUSTRY.

The present condition of the dairy industry in Ireland is reviewed by the *Cowkeeper and Dairyman's Journal*, of London, and the following interesting conclusion made:

"Ireland was once the greatest butter producing country in the world. Irish butter was considered superior to any other, and everywhere it obtained the highest price. This was only a few years ago, yet in that short period it has had to give place to butter from Denmark, France, Canada, and even from Australia and New Zealand. Why is this? Our butter is as good as ever it was—perhaps better. But England, which pays every year nearly £13,000,000 to foreign countries for this commodity, says theirs is better than ours, and it is ready to pay to these countries a higher price than to us because they give it the kind of butter it wants. England must have butter of exactly the same excellent quality every day in the week. It must be uniform—that is to say, it must be of the same color, the same degree of saltness, and the same flavor. That is what the other countries supply, and this is why their butter fetches a higher price than ours. Theirs is excellent, uniform and reliable. Ours may be excellent in our opinion, but we cannot persuade the English buyer that it is, for it is neither uniform nor reliable."

CANNING SALMON IN BRITISH COLUMBIA.

The salmon-canning industry is an important source of revenue for the inhabitants of British Columbia. The product of the rivers stands with the products of the forest and the mines as the three great staple industries of the Pacific Coast. The Vancouver *World* recently gave the following interesting account of the growth of this important business:

To Messrs. Turner and Beeton is given the title of pioneers of the salmon canning industry. Their first venture was on the Skeena, where they established the Inverness cannery in 1875. Charles Windsor, one of the old-time canners, says that a small cannery was operated at Brownsville in 1872, and moved to New Westminster in 1873. On the Fraser two canneries were established in 1876, one by Alex. Ewen, who is still to the front as hale and hearty as ever on Lion Island, and the other the Fraser River Cannery, on Dease Island, by the British Columbia Canning Company, of London, Eng. Mr. Ewen adopted as his trade mark the British Columbia coat of arms, the Lion and Crown, and it still remains on his labels. In 1877, M. M. English, who was an American despite his name, established the Phoenix cannery on Lulu Island. He passed away but recently, respected for his many good qualities, and admired for his enterprise. In 1878 P. Birrell, B. Douglas, and H. Elliot started what is now commonly called the Birrell cannery, and in the same year R. P. Rithet and J. Laidlaw started the Delta. In 1879 A. Ewen, D. J. Munn, D. S. Hennessy, and George Alexander started the Bon Accord. There has been a steady increase ever since, and at present there are some 34 firms engaged in canning salmon on the Fraser River, and 22 firms operate salmon packing plant on other rivers of the province. When it is taken into account that a single company or canner often owns several factories, it will be readily seen that the industry brings returns to many different interests.

The process of canning the fish is very interesting. The receiving floor is made of asphalt, as is also that under the cutting and washing departments, which, being water-proof, cannot absorb any of the blood or the juices from the discarded offal, and as it is kept continually washed down there is absolutely no possibility of the production of noxious odors. The fish are passed first from the receiving floor to the guillotines, which keep steadily at work decapitating. The fish then pass on to have their fins and scales removed, being kept all the time in running water. After being relieved of fins and scales the fish pass on to a revolving paddle-wheel, which carries them to a series of knives, which cut them into lengths to fit the cans. They then go into the cans which pass through the automatic can-wiper, in which a jet of steam and a corrugated rubber roller combine to remove any particles of fish which may have adhered to the outside. Through the wiper they continue on an endless belt past operatives, who put a small square of tin on top of each can. This is to prevent the fish from filling up the blow hole when the cans are tested later on. The tops are put on the cans by hand as they pass along, and they then go through a crimping machine, and then through the soldering machine. After the soldering, the hole in the top is filled up. The cans are then tested to see if they are air-tight. They then go into the retorts where they are submitted to 256 degrees of steam heat for 45 minutes. When taken out the tops are again pierced and those that do not blow off steam are set aside as having been leaky. These holes are then soldered up and the cans set aside to cool. When cool they are ready to be lacquered, labelled and put on the grocers' shelves.

MANITOBA WHEAT HARVEST.

At this season of the year the interest of every citizen of Manitoba and the North-West Territories is turned to the condition of the wheat crop. So great is the dependence placed upon this cereal that all but a very small percentage of the inhabitants of the North-West are affected directly or indirectly by the results of the harvest. The outlook, from all reports, was never brighter than at present. "The crop of 1897," says the Winnipeg *Free Press*, Aug. 26th, "is now almost an assured success, both in yield and in quality. The report of damage or even suspected damage by frost has not been received from any point in the province, and the greater percentage of the wheat is now cut. The milling companies and those owning elevators throughout the province have already most of their buyers in the field, or are sending them out at once. The Lake of the Woods Milling Co. has received new wheat at Gretna, Alta., Rosenfeld, and in the Hartney district. The sample in every case is reported as being the best No. 1 hard. The yield was satisfactory. For this wheat, which comes, of course, directly from the machines, no price has as yet been fixed As to the price wheat will likely bring this fall a gentleman from Brandon states that contracts have been made there for the delivery of large quantities of No. 1 hard at 75 cents per bushel. This wheat was to be delivered at any time during the month of September, and a willingness on the part of buyers to pay such a price in advance is an indication of a faith in prices by the dealers."

OUR LEATHER IMPORTS.

We have been frequently told that the tanners of the United States are making a more than usually determined effort to sell goods in Canadian markets. The domestic tanners of sole leather, by means of combination, have been able to secure a fair share of the export trade to the United Kingdom. The United States Leather Company, whose export business has, in consequence, suffered, threatened to make Canada the objective point of their shipments. It does not appear, however, that the imports of sole leather from the United States have materially increased within the year. During the twelve months ending June 31st, 1897, American tanners exported sole leather to British North America having a value of $82,722, as compared with exports $74,560 within the same period the previous year. These figures indicate that Canadian tanners are holding the market secure from the invasion of foreign manufacturers. The imports of Canada and Newfoundland of other leathers than sole have increased considerably within the twelve months ending June 31st. For 1897, the imports aggregate $654,001, and for 1896, $428,435 in value. This increase of $228,576 in the value of our purchases does not necessarily mean that Canadian tanners have been worsted to that extent in competition with the American tanners. A part of the increase is no doubt due to the demand of Canadian shoe manufacturers for particular descriptions of leather that could not be obtained in the home market. With a general advance of prices for leather in the United States, which now appears imminent, the imports of Canadian makers of shoes from that source may be expected to decline rather than continue to increase.

HIDES AND LEATHER.

There are at present no signs of a decline in the hide market, and the only resort of tanners who have been making cheap leather out of dear hides for a long time, would appear to be an advance in the prices of their product. At 8 3-4 cents, Toronto hides are almost on an export basis. But the small margin, ¼ cent, between the prices of cured and green hides, gives little opportunity for the merchant to market hides in the United States. From different points in Ontario, however, word comes that shipments are being made across the border line. We are told of a carload sent from Western Ontario at 10 cents, delivered in Detroit. It is said that a carload has also recently been sent from Hamilton to Boston. The duty has not prevented American buyers from visiting this market as usual, and several have been in Toronto within the past week. The strength in the markets of the Western States has been increased by large sales to the United States Leather Company and other tanners, aggregating last week 119,300 hides.

Stocks of hides and leather in Ontario are not excessive, and there is every chance of success attending an effort on the part of tanners to advance prices. Our advices from Montreal indicate fair purchases of sole and Dongola leather. The price of the latter leather has an upward tendency. Western tanners assert that harness, bridle, and skirting leathers are considered better property than they were a month ago. The market for russet goods is regarded as firmer. A sale of splits to a Montreal house at 22 cents, which two weeks before had been refused at the seller's offer, is regarded with satisfaction on the part of tanners. Although the unexpected may always happen, the indications all point to firmer prices in the leather industry.

BUYING FROM PEDDLERS.

The average woman—or, for that matter, man—dearly loves a "bargain," and peddlers know it. The cities, towns and country districts of Canada are overrun with these fellows, who have unheard of "bargains" to offer in all sorts of wares. The credulity that exists in mankind is nowhere made more manifest than in the success with which peddlers by reason of well-told tales, find customers for their wares. Frequent reports are received of the frauds they perpetrate in different parts ol the Dominion. The last issue of the Winnipeg *Commercial* contains the following account of their operations in the Province of Manitoba: Stove peddlers are now operating in Manitoba, and from enquiries made by the *Commercial*, we learn that stoves are being sold at very high prices in comparison with their actual value. The stoves being made of malleable iron, they will stand a lot of pounding or banging around. This is a trick of the trade to help to sell the stoves. The peddlers begin pounding the stove with a hammer to show that it will not break. Of course malleable iron will not break, but it does not prove that it is a good thing to make a stove of that class of iron. This point, however, the prospective buyer does not understand. For ordinary farm purposes, the usual cast stove is more valuable than a malleable iron or steel stove. In Manitoba farm houses cook stoves are used largely for heating, as well as for cooking purposes, and an ordinary heavy cast stove is far more valuable for heating purposes, and can be obtained at half the price the malleable stoves are being sold at.

These stoves are very light and the fire-place is too small, while the price at which they are being sold at is 10 per cent. or more higher than prices asked by regular retail dealers for a decidedly better steel stove. Any of the standard Canadian steel stoves can be purchased to sell at retail in Manitoba at lower prices than have been paid peddlers for these stoves. If a steel stove is wanted, farmers can purchase a better stove, weighing from 50 to 100 pounds more than the stoves which have been peddled about, for less money, from any regular retail dealer. While these malleable stoves will stand considerable pounding, they are liable to warp badly the first time a hot fire is put in them.

A REVIEW OF THE HARDWARE AND METALS TRADES.

The wholesale houses do not report much activity in business this week. Their travellers are in the city and mail orders are neither numerous nor for large quantities of goods. The first week of the exhibition has brought few visitors to the hardware house, but better results are looked for next week. The demand for wire is reported slow and trade inactive. Some improvement has been made in cut nails, The wire nail market remains "open" and manufacturers are not quoting uniform prices. There has been an advance in the price of lead pipe, the discount being now 30 per cent. instead of 30 and 5 per cent. as formerly. Quotations on iron pipe have been withdrawn. An advance of 20 cents per 100 lbs. has taken place in the value of white lead Barb wire is also dearer, merchants now quoting $2 25 per 100 lbs. f o.b Toronto, terms continuing unaltered. For shot the trade discount is now 15 per cent. instead of 17½ as formerly quoted. The trade in plumbers' supply on country account is fairly good, but city business remains dull and depressed.

There is a steady movement at the moment in metal goods. The demand for galvanized iron, sheet steel and block iron is, on the whole very satisfactory. Canada plate is being freely shipped from stock. while orders are being placed for import. British North American imports from Great Britain for the seven months ending July 31st, 1897, as compared with the same period in the previous year are valued as follows:

	1896.	1897.
Hardware and cutlery	£36,143	£37,755
Iron and steel	12,282	3 807
Bar, angle, bolt, rod	9,569	5,799
Railroad iron, all sorts	88,089	37,654
Hoops, sheets, boiler plate	25,110	31,003
Galvanised sheets	30,979	25,458
Tin plates and sheets	77,235	94,942
Cast and wrought iron	29 625	19,277
Old iron	11,422	2 577
Steel, unwrought	55,185	29,537
Lead, pig and manufactures	8,506	10,959
Tin, unwrought	9,510	10,179
Total	£393,655	£308,947

The imports of the seven months ending July 31st, 1896, had an aggregate value of about $1,915,788, as compared with imports valued at $1,503,542 during the same period in the present year. This means a falling off in trade of 21 5 per cent. It is somewhat difficult to account for this serious decline in our trade with the Mother Country in metal goods. The diminished trade has, as will be seen from the above table, affected nearly all the staple metal goods which we are accustomed to buy in the United Kingdom.

THE CHEESE BOARDS.

The cheese markets, so far as transactions are concerned, have been almost at a standstill. There is a deadlock between buyers and sellers. The large exporting firms have refused to follow the recent advance in prices which dairymen are attempting to confirm, and as the salesmen, with few exceptions, have declined to retreat from their position, the sales recorded on the Ontario boards have been few in number. The offerings, however, were large, 32,289 boxes having been boarded at 17 meetings against 31,704 boxes at 18 meetings the previous week. Exports from Montreal for the week ending Aug. 28 were 79,783 boxes as compared with 94,624 boxes the corresponding week last year. Shipments to date are 1,136,594 boxes, against 935,472 boxes to date a year ago. We append the usual table:

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.
Lindsay	Aug. 26	..	1,700	1,275	9 13/16-9⅞	......
Kingston	" 26	..	1,112	....	9¼	......
Brockville	" 26	..	3,821	4,000	10-10⅛	......

Tweed	" 1	..	625	....	9¼	......

STOCKS REVIEWED.

The spirit of the stock market during the week has been decidedly firmer. Bank stocks have attracted considerable interest. A week ago Dominion sold at 236, and on Thursday morning of this week 100 shares of the stock of this Bank were sold on the Toronto Exchange at 242. For Commerce 134 was bid as against sales at 130 on the previous Thursday. Montreal exchanged hands at 235. Insurance stocks show a firmer tone although it cannot be said actual transactions have as yet revealed a general advance in the value of shares. Considerable sales of Western Assurance were made during the week, the stock standing three points higher at the close of the market.

Loan company shares have witnessed so many vicissitudes in the past several years that it is a very pleasant duty to chronicle an improvement in their values. The abundant crops which have been harvested and the prospect of good prices for grain will assist in a recovery in the value of farm property, which has suffered almost general depreciation in the past several years. The improvement is most marked in the case of companies whose interests in the North-West wheat belt are important. The report is current in Winnipeg that the volume of business in the Canadian Pacific Railway Land Department for the first seven months of the year is more than double that for the corresponding months in 1896. The actual difference is said to show as much as 120 per cent. in excess of last year. The improvement is alike noticeable in the larger quantity of land sold and in the readier payment of current accounts and arrears of interest. The stock of the North-West Land Company was sold a week ago at 52, but advanced during the week to 59¾, falling back at the close of the market to 58. This company has issued a statement of the sales of land made for the first seven months of the year. As compared with the same period a year ago, the proceeds of sales show an increase of $50,750.91; the sale of land an increase of 13,684 acres, and the cancellation of capital stock was $25,325 greater than in the corresponding seven months last year. With but one exception, the loan companies have either held their own or gained ground in the stock market during the week. This exception, curiously enough, was a company which confines its business to Manitoba and the North-West. The decline was the result of a reaction from a too rapid advance in value.

Bear influences have succeeded in checking the advance in C.P.R. stock and a decline of ½ per cent. is the result of the week's transaction. The argument used by the interests who discouraged this stock has been the pending decision of United States Attorney-General McKenna in regard to the interpretation he will advise the Treasury Department to give section 22 of the new Tariff Act. This section, it will be remembered, provides, according to the contention of certain American railways, for a discrimination of 10 per cent. against goods imported into Canada and afterward transferred in bond to United States territory. A part of the traffic which the C.P.R. has in carrying teas, matting, silks, etc., from China and Japan, will be injured in the event of a decision favorable to the argument of the American lines.

Street railway earnings in Toronto and Montreal continue to increase. The Toronto Railway Company give the following statement of gross car earnings for August 1897, 93, 224, 33; 1896, $84, 187, 45, an increase of $9,036.88. The report of the Montreal Street Railway for the eleven months ending August 31, shows earnings of $1,212,798 against $1,132,321 for the previous eleven months, an increase of $80,477.

A feature of the week's market has been the comparatively small number of transactions in face of an increase in quotations. This may be taken as an evidence that holders are confident of the future and are determined to realize in the advancing values which they believe to be at hand.

FLAX CULTURE.

Some twenty-five or thirty years ago when the cultivation of flax was first introduced into the province of Ontario predictions were made that this industry was one destined to become an important Canadian industry, but these prophecies have not been realized. A certain amount of flax is grown in Manitoba for seed, and in Ontario for both seed and fibre. But flax cultivation is carried on in these provinces only in a limited way. In Manitoba the area under crop for the present season is placed at 20,653 acres, which, at the estimated average yield of 15 bushels per acre, means an aggregate of 309,795 bushels The Mennonites are the principal growers of flax in Manitoba, and ship their harvest to the Province of Ontario. In a recent interview with a representative of the *Sun*, Mr. John Hogarth, whose name has been for some time associated with this industry, described the state of Ontario flax milling: "The first mill was opened at Wolverton, by J. Helson Brown, and mills were afterwards started in Blenheim and in Oxford County. At present there are between 35 and 40 factories, all located in what may be called the Stratford district. Only about 25 of these are running, however, some of the others being closed on account of litigation. Each factory in operation requires the product of about 500 acres of ground. The average production is two tons to the acre, and the crop sells at $6 to $10 per ton."

Flax, according to the same authority, is easy on the land. It does not take from the soil any of the elements needed to produce wheat. Land that is wholly run out for wheat or oats will grow flax. It is an excellent crop to rot sod, and it leaves the ground in as good condition for fall wheat as if the soil had been summer fallowed. Flax can be pulled for $4.50 per acre, and no expensive machinery is required for taking off the crop. It goes direct from the field to the factory. Taking everything into consideration—no threshing, no storage, no risk of fire—it costs as little to harvest and market an acre of flax as it does one of oats. But oats will only yield about $8 to the acre, while flax will return $16 to $18. More than that, flax can be turned into money earlier in the season than any other crop which the farmer produces.

In view of these advantages why is it that flax growing does not become one of our national industries? There are two main reasons for the lack of progress—scarcity of labor and lack of skill. The plant requires careful attention and can be successfully grown only where there are enough hands to give it the required assistance. The lack of special skill devoted to the industry has resulted in our limited market. Foreign flax to the value of £2,525,195 was imported into the United Kingdom in 1894. The flax is used principally for the linen industry, and Canadians are prevented from obtaining a share in this trade by the unsuitability of their product. During the present year, we believe, a trial shipment of flax was made from Canada to the linen centres of Ireland, but was rejected, as not of the right fibre for the purposes of linen manufacture. In European countries the industry has been established by the instrumentality of paid Government experts, who have instructed farmers in the proper methods of cultivation. Is this not a field for the energies of our own Government agricultural departments?

—The Sherbrooke, Que., Fair opened on Monday, Aug. 30th. The weather was fine and a good crowd gathered to inspect the different departments and witness the variety performance in front of the grand stand. The industrial and agricultural displays are of a high order. This exhibit comprises hardware, gold and silverware, metal work, house furnishings, woolens, cottons, harness and saddlery materials, rubber goods, chemical manufacture, pharmaceutical preparations, etc. The Machinery Hall, was overcrowded with agricultural] implements and machines, engines, wood and iron working machinery, mill machinery, fire and service pumps, railway appliances, etc. The cattle show is said to be the largest ever made there and comprises fine specimens belonging to the following classes: Durhams, Herefords, Aberdeen-Angus, Ayrshires, Jerseys, Guernseys, Holsteins, pure bred Canadian cattle, general purpose grade cattle, and grade cattle fo dairy purposes.

DOMINION MILLERS' ASSOCIATION.

The Dominion Millers' Association held its annual meeting on Thursday afternoon, in the Toronto Board of Trade Building, and some ninety members, from almost every portion of the country, attended. The address of the president, Mr. James Cummings, of Ayr, was brief but interesting. Although several important mills had stopped production partially from scanty earnings, still the increase of capacity of others, and new mills, had made, on the whole, a healthy advance. The president thought it the duty of millers to reach out for foreign markets. He suggested that the members should strongly urge on the Government the absolute necessity of revising the inspection laws so that the same standard would rule in Fort William, Winnipeg and Montreal.

A resolution was passed asking the Government to prohibit the importation of adulterated flour. It was on a motion of Mr. J. L. Spink that it was resolved that the association ask the Government to appoint a chief inspector to see that the present inspectors did their duty according to the Government standards. The executive committee had strong convictions on the work of the inspectors, and their report said: "As the percentage of smutty wheat in last year's crop was very small, there have been no complaints about scoured wheat in shipments from the crop of 1896, and, in fact, the inspection on the whole was very satisfactory until this spring. Since the opening of navigation there has been considerable complaint of the quality of No. 1 hard, and we know several instances where the millers got an allowance of two cents a bushel from the shippers, who acknowledged that the wheat was not what it ought to be."

During the session the following papers were read and discussed by the members of the association:—"Grown Wheat and its Effects on Flour: What to Pay for It,' by R. Noble, Norval, and J. L. Spink, Toronto; "Our Trade with Newfoundland and the West Indies," by Lincoln Goldie, Guelph, and W. H. Meldrum, Peterborough; "The Desirability of Reciprocal or Preferential Trade between Canada and the British Colonies," by R. Neilson, of the Goldie Milling Company, Ayr; "Yield of Flour per Bushel last Year and from New Crop," introduced by S. R. Stuart, Mitchell; our bolting system, "The Plansifter," by W. and J. G. Greey, Toronto; "Universal Bolter," by the Standard Milling Company; "Round Reels," by the manufacturers; "How to Extend our Export Business with Great Britain and the Continent," by David Plewes, Toronto.

The discussion on the paper of Mr. Meldrum, of Peterborough, led to the adoption of a resolution asking the Government to take steps to arrange a preferential treaty with Great Britain and the colonies, more especially with the British West India Islands.

The election of officers resulted as follows: President, S. R. Stuart, Mitchell; 1st vice-president, J. J. Hunt, London; 2nd vice-president, R. Neilson, Ayr; treasurer, William Galbraith, Toronto; representative on the Toronto Exposition Committee, James Goldie, Guelph. Executive Committee—A. N. Baird, Paris; James Cummings, Lyn; J. D. Flavelle, Lindsay; John Goldie, Ayr; W. H. Meldrum, Peterborough; M. McLaughlin, Toronto; J L. Spiok, Toronto.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Sept. 2nd, 1897, compared with those of the previous week:

CLEARINGS.	Sept 2.	Aug. 26.
Montreal	$11,645,323	$10.903,284
Toronto	6,843 235	6.243,367
Halifax	1,070.084	1,154.205
Winnipeg	1,428.634	1,181,856
Hamilton	563 983	518,909
St. John	608,686	621,150
	$22,159,945	$20,622,771

Aggregate balances this week, $2,926,098; last week, $2,925,681.

—A number of Montreal merchants interested themselves this summer in securing cheap rates from the railways for the purpose of giving retail merchants an opportunity of buying in person their autumn supplies in Montreal. For four days beginning Friday, August 27th, the railways are said to have carried an average of 600 persons into the city on these terms. This would mean, in all, about 2,400 people, and while, of course, not all of these have been "buyers," a very large number of them have been. Wholesale merchants say that the extra business which has resulted has been very considerable. With the better times which the past few months have ushered in, the buying capacity of country merchants has increased very appreciably, and Montreal merchants are feeling the effect in larger orders than have been the rule for many years.

BOOKS RECEIVED.

City of Brantford Financial Statement.—A pamphlet of 100 pages, printed at the *Courier* office, showing the ordinary standing and debenture debt of the municipality of the city of Brantford, Ontario, prepared by Walter T. Mair and John Creasser, municipal auditors. The income and outgo of the schools, the free library, the hospital, the water commission, etc., are separately given, and there is an audit of the tax collection rolls. It is interesting to place the figures of the year 1877 alongside those of 1897 in the case of Brantford. Her progress is well shown by such a comparison. Thus: Value of realty in 1877 was $2,796,480; in 1897 it was $5,718,393. Real and personal property and taxable income combined, $3,358,610 in 1877, and $6,448,203 in 1897. The resident ratepayers of 1877 numbered 1,825 out of a population of 10,631 in 1877, and the number of ratepayers in 1897 was 3,429, out of a population of 16,314. The general debenture debt is $740,000, of which $295,000 was incurred for water works and sewers, and the total debt is $899,000. The municipal assets are put down at $1,031,000, one-fourth of which is in lands and parks and school properties.

Equality, by Edward Bellamy, author of "Looking Backward," etc. This is not an ordinary book; it is by no means light reading, and its aim is not a commonplace one. How it has impressed different readers may be gathered from what is said of it by three Toronto persons who gave their views of it thus: "I found it a fascinating book," cried the first; another said: "This is infernal nonsense," while a third declared the author to be "a modern Fourier, with this difference, that while the French economist named did not deem it useful to abolish private property. Mr. Bellamy's book pictures state socialism absolute;* * * only his notion seems to be a rather more refined natural optimism than Fourier's." There is much in the volume, of course, that seems like "nonsense" to nineteenth century readers, but the "fascination" comes in where twentieth century arrangements, fiscal and social, are with much cleverness contrasted with what the author calls "the frenzied folly of our competitive industrial system; the inhuman contrasts of luxury and woe and boundless squalor" of the present day. Mr. Bellamy does not aim to be funny, and is certainly not a Jules Verne, but if one were to look in his book for amusement, it might be found in descriptions of such things as paper pots, kettles, or electric stoves; paper clothes for male and female, not washed, but thrown away daily, like Chinese napkins; electric hay-forks, and potato shovels, for lessening labor on the farm, driven by wind or tide; or novelties such as the abolition of doctors and clergymen—the race having outgrown their ministrations; supply of music and theatricals to householders by means of telephone and electroscope; wholesale vegetarianism, and the changing of the climate of districts by electric appliance and (presumably) by afforestation. The ingenuity and earnestness with which all this is explained, or where it cannot be intelligibly explained, is suggested by the author, are very marked, and would almost cause us to believe that he believes in it. But one class of reader is sure to be disappointed in the book—which, by the way, is a very compact and excellently-printed book*, at a very reasonable price—namely, the reader who looks for a happy and complete ending to a love affair. Careless and ungallant, Mr. Bellamy, after bringing us to the point where Julian goes to a jewellery shop to buy an engagement ring for the Edith who has charmed him, but cannot find one, informs us that engagement rings were no longer fashionable in the twentieth century, but most tantalizingly leaves us to guess the issue of this later New England amour.

Hand-Book of Canada**—A serviceable volume, well fitted for its purpose, which is to give our scientific visitors to Canada some account of her resources, her administration, and her trade. Its 400 pages are divided into three parts and nineteen chapters. Some of the chapters are by men well qualified to write of the special subjects. For example: The Forests of Canada, by Prof. John Macoun; Chemical Industries, by Dr. Ellis; Agriculture, by Wm. Saunders and James Mills, M.A.; Water Powers, by Wm. Kennedy, M.E.; Geology, by G. M. Dawson; Climate, by R. F. Stupart. We trust to give extracts later from some of these valuable monographs.

Among the maxims which John R. Hegeman keeps in his mind's eye may well be this one: "Whatever is worth doing, is worth doing well." At any rate, an exemplification of this saying is found in the latest publication issued by the Metropolitan Life Assurance Company, which is one designed for the healthful stimulation of the field force. "A Souvenir Number of the Weekly Bulletin" are the modest terms used to describe the beautiful quarto of 110 pages, which reached this office yesterday. It contains a historical sketch of the company, text and illustrations descriptive of the company's head office, and other contents, besides hundreds of portraits of superintendents and agents, daintily done on the finest of paper. It is a present any official may be proud to receive.

INSURANCE ITEMS.

We were once told by the manager of a large planing mill, says a contemporary, that while the tanks on the roof were examined by the underwriter's inspectors, yet the most dangerous part of the plant was entirely overlooked. We wonder if the hose so neatly coiled up to be seen in all large establishments is ever subjected to a test and all fire buckets examined, or are they only put in, as one has said, "to satisfy the insurance companies"?

Life insurance companies have at last found out that women are as good risks as men. And why shouldn't they be? Men take any amount of risk to get them as wives—and very often they turn out better than their husbands. No agent will let a good woman risk escape him—any more than that of a man.—*Insurance Register.*

"The Law of Insurance in the Law School" was the subject of a paper read at the meeting of the American Bar Association by John A. Finch, of Indianapolis, Ind. He contended that the law of insurance should be so taught in the law school that the graduates should know the fundamental principles of the insurance business in all its varying branches. Would it not be a good plan to have more attention paid to the law of insurance in the Ontario Law School?

The members of the staff of the Mercantile Fire Insurance Co., Waterloo, had a pleasant surprise for their chief, Mr. James S. Lockie, a few days ago. As a token of their high regard and esteem they presented a very handsome oak, roll top desk and tilting chair, with an illuminated address expressing thanks for his uniform courtesy and kind consideration during many years. It will be remembered that Mr. Lockie announced his retirement from the active management of the Company.

APPLE PROSPECTS.

The apple season is almost at hand, and for some weeks past orchard prospects have been discussed by merchants and growers. As usual there are differences of opinion as to the probable outcome of the trade. A report has been issued by a prominent Canadian firm, M. H. Peterson & Co., Toronto, who have taken every precaution to accurately represent the situation. According to Messrs. Peterson & Co., the crop of Great Britain will be considerably less than last year. From France and Belgium we may expect a fair average yield, while the same may be said of Germany and Holland with regard to early apples. The later apples are not a successful crop.

The following are the estimated percentages of the crops in the different States based on a 100 as a full crop:—New England States, 25 per cent.; New York State, 35 per cent.; Pennsylvania, 50 per cent.; Maryland, 60 per cent.; Virginia, 70 per cent.; West Virginia, 45 per cent.; Kentucky, 65 per cent.; Ohio, 25 per cent.; Indiana, 65 per cent.; Michigan, 35 per cent.; Illinois, 85 per cent.; Iowa, 75 per cent.; Missouri, 85 per cent.; Kansas, 70 per cent.; Arkansas, 90 per cent.; Tennessee, 70 per cent.; Colorado, 100 per cent.; California, 100 per cent.; Oregon, 100 per cent.; Wisconsin, 50 per cent.; Minnesota, 55 per cent.

The Nova Scotia yield is likely to be less than an average crop. Of Ontario Messrs. Peterson say in part:

"From reports received, about 35 per cent. of an average crop, with all winter varieties short, except Northern Spies, which appear to be in many sections quite up to the average. While the United States will this season produce a large quantity of apples, yet the sections yielding best are in the West, which usually are not extensively exported, but it is quite possible this season a considerable quantity may be exported from the Western States. It is quite apparent our reliable market this season will again be Great Britain, and we are of the opinion that for choice apples, properly packed, at reasonable prices, the outlook is encouraging. We, however, would warn intending shippers that great care should be exercised in handling only good apples, and only such quantity as you yourself, or some one or ones of experience, in whom you have confidence, can personally oversee. It is reported, buyers in some localities, owing to undue excitement, have offered astonishing prices, but it is the misfortune of the apple trade that prices paid by buyers are often not justified, as the custom is that the apples are purchased before any large percentage is marketed."

FOR GROCERS AND PROVISION DEALERS.

Estimates of the probable increase in the world's visible supply of coffee for the month of August have been increased to 750,000 bags.

Sterling & Co., Blenheim, Ont., are said to have paid out to the farmers in that vicinity over one hundred and fifteen thousand dollars for hogs and cattle since last December.

At a meeting of the Montreal Butchers' Association, under the presidency of Mr. Pierre Bedard, Mr. Arthur Pare was elected first vice-president, in place of Mr. M. Daoust, deceased. It was unanimously resolved to protest strenuously against the changing of the site of the East End Abattoir.

All the bacon in Winnipeg, according to the *Free Press*, has been bought up to supply the demand at the Yukon gold fields, and United States sources of supply are now being drawn on Heavy shipments of other classes of provisions have also been forwarded to the coast and to Edmonton for the same destination.

The fishing season at Steveston, B.C., has closed and the following is given as the packs of some of the canneries at that busy salmon packing centre: Gulf of Georgia, 50,000 cases; Star, 22,000; Federation, 25,000; Phœnix and Britannia, 60,000; John A. Hume, 16,000; London, 21,000; Colonial, 15,000.

The Grand Trunk Railway, in response to a request from hay exporters, has made a material reduction in the freight charges on hay intended for export. The new tariff is applicable only on shipments of hay consigned through to European ports. The rates shown on the tariff include cartage, wharfage and harbor charges at Montreal.

Mail advices from California report an active and firm market for canned goods. The *Fruit Grower* says: "Export orders are coming to hand, but the volume of foreign trade is not up to last season's. The shortage of the Eastern fruit crop has caused buyers to place liberal orders for peaches and pears. Packers are very busy and a large output is looked for.

Mail advices received from Yokohama report the shipments of tea from May 7th to July 30th inclusive as follows: To New York, 7,328,-267; do. via Suez Canal, 1,240,311; San Francisco, 3,315,872; Chicago and West, 10,605,740; Canada, 4,209,770; total, 26,699,960; last year the total for the same period was 19,731,628 and in 1895, 26,676,819.

A special joint through east-bound freight tariff has been issued by the Canadian Pacific on flour and grains, peas, mill feed, malt, oil cake, flaxseed and linseed meal to St. John, N.B., St. Stephen, N.B., St. Andrews, N.B., Fredericton, N.B., and Halifax, N.S., and the rates from the following principal points of shipment per hundred pounds are as follows: Toronto, Peterboro, Hamilton, Brampton, Guelph, Galt, Preston, Hespeler, Woodstock, London, Ingersoll, St. Thomas, twenty-one and a-half cents; Chatham, Windsor, twenty-three cents; Woodbridge, Bolton, Cheltenham, Inglewood Junction, twenty-three and a-half cents; Forks of Credit, Hillsburg, Fergus, Elora, Orangeville, twenty-four cents; Orangeville Junction, Mount Forest, Harriston, twenty-five and a-half cents; Wingham, Owen Sound, twenty-six and a-half cents. The new tariff is effective at once, and refers to the commodities in barrels or bags, not in bulk.

IN THE DRY GOODS STORE.

An improvement in the Canadian trade is reported from Irish textile centres.

The dry goods houses of Toronto feel the good influences of the millinery openings and the first week of the Fair.

The Bradford correspondent of the *Draper's Record* says: "There is a fair enquiry for Canada and the Colonies and the trade is healthy."

Advices received from Shewan, Tomes & Co., of Canton, under date of July 22, report the raw silk market as follows: Prices do not show much change; but only a few buyers have been able to pay them, others offering 2 to 3 per cent. under the rates demanded. The market for Europe is comparatively quieter, and there is little or nothing doing. Re-reels are neglected, buyers being provided for some time to come.

The selling agents of the Dominion Cotton Mills Company and the Canadian Colored Cotton Mills Company expect samples of prints and colored cottons for the spring season of 1898 next Monday. The samples are usually on hand before the first week of September, but it is thought that the delay is in the interest of the dry goods trade. The tendency in recent years to begin one season long before the previous season has closed has been carried to too great an extent, and has been without doubt productive of serious loss to mercantile interests.

A London, Eng., letter, dated August 14th, says: "There has been a virtual cessation of shipments to America, and the continental demand for woolens remains small, although numerous inquiries have been made. American houses are also making inquiries after latest samples, but they have not yet placed any orders. A steady business is going on with Canada. Alterations with our tariff relations with Germany and Belgium have been proclaimed this week, and will most likely have a good effect from our point of view, but up to the present no actual improvement can be said to have occurred."

The head of a silk department of a large New York jobbing house gave this summary of the situation to the *Journal and Bulletin of Commerce*: "The new season's novelties are selling well. Fancy taffetas still lead in the demand. Black silks strong, with a preference shown for black brocades. Satin-faced goods experience a good call. Black grounds with colored stripes, barre or figures, are freely inquired for. Taffeta glace brocades are going forward in good quantities, particularly medium priced goods. In high colored silks for evening wear mousseline de soir have the call. Moires are quiet, with Roman stripes in taffetas not as active as a week ago. The market has developed no decided favorites, all silks selling well."

Advices from Lyons, dated August 17th, refer to an event of interest to Canadians as follows: The recent denunciation by Britain of the German and Belgian commercial treaties has furnished the Melinite organs of the French press with an opportunity to point to Britain in jubilant tones as an apostate of Free Trade, but the serious friends of the silk trade here ask, supposing Britain should really revert to protection, what can France be jubilant about in view of the fact that she exported to Great Britain last year over £40,000,000 worth of goods, and imported thence only about £20,000,000 worth, chiefly raw materials? What can the silk industry gain, in particular, which sold to Britain last year £5,000,000 of goods and bought from her only £500,000 worth? Exports from the beginning of the current season from Japan are 1,500 bales for Europe and 3,250 bales for the United States, against 2,150 and 250 bales respectively in the same time last year.

BEHIND THE SHOE COUNTER.

"School-shoe" announcements should be very conspicuous durin September.

Samples for the 1898 spring trade, says the *Shoe and Leather Reporter*, are now being made up in most of the factories, and quite a large number of novelties are to be seen. It has been decreed that the pointed toe go out of fashion, and the round toe is to be much more generally worn. However, some pointed toes are among the 1898 samples.

With the increase in building and luxurious appointments in modern residences, the call for decorations in leather now grows to larger proportions. By the use of leather curtains instead of doors all the rooms on a floor can be thrown into one apartment if necessary The use of leather in libraries is almost universal. It deadens the sound and has a rich effect.

Public interest in football matters has each autumn grown keener, and the "wide awake" retailer has not been slow in taking advantage of the demand for football boots. The prospects for this trade during the coming season are said to be excellent.

The most radical changes in spring footwear styles are noticed in bicycle shoes and leggings, in which there are many new styles. The American trade has the impression that women are to discard leggings and high shoes for riding bicycles for the low button or medium high button shoe, which is very comfortable. Accordingly, says an authority, there is a woman's bicycle shoe shown for 1898 which has four buttons, and relieves the wearer from all danger consequent upon the untying of lacings. The men's low bicycle shoe has three buttons, and it looks very comfortable and stylish. For women and men who desire high cut bicycle boots they are shown in several new patterns. The golf shoe is made of russia leather, aud has a low, broad heel and thick toe, the latter having several rubber discs, and the heel a rubber crescent to prevent slipping when dealing a blow on smooth grass.

Politeness, comments a trade journal writer, is probably one of the greatest attributes of success, There are many people who willingly pay more money for the same article in a store where they are sure o courteous treatment than trade where boorish clerks offer their wares for less. It sometimes costs an effort to be polite when customers are cranky, but the effort is well expended. The dealer who meets every customer with a smile, and insists on his clerks doing the same, has a big handicap over competitors who do not pursue like methods.

Manufacturers of heavy kip boots, says *Hide and Leather*, Chicago are becoming quite alarmed at the scarcity of this material, and are already writing to tanners in reference to supplies of kip for next year. Tanners have been so discouraged at the lack of profit in making waxed calf and kip that they are turning to other leathers.

Some of the United States tanners, according to a Western trade journal, who could not go to the Klondike, did the next best thing by obtaining large lots of imported hides before the tariff bill became law

FOREIGN TRADE OF FRANCE.

Some important statistics relating to the foreign commerce of France have just been made public by the customs authorities. The trade between the Republic and her colonies, as well as with other countries, is therein outlined, the business being grouped in three periods of five years each, commencing with 1882 and including the commerce of 1896.

The total value of the imports and exports combined for the three periods is as follows:

	Francs.
1882-86	36,515,900.000
1887 91	36,201,500,000
1892-96	32,543,900,000

There is thus a decline of 3,697,600,000f. during the last five years in comparison with the corresponding period immediately preceding, and a diminution of 3,972,000.000f. in comparison with the five years 1882-86.

Separating the imports from the exports we find the former for the period already named to be:

	Francs.
1882-86	21,054.8 0,000
1887 91	20,027,0 0,000
1892-96	17,569.900,000

This diminution of imports is attributed to the workings of the revised tariff. While this development may be highly gratifying to political economists of the school which looks upon heavy imports as a sign of depression, it must not be forgotten that in the last five years a very serious reduction has also characterized the exports from this country. Although increasing during the first period, and in the second five years under review reaching a total of 14,461,100,000f., they declined during the five years 1892-96 to 14,974,000,000f., a loss of nearly 1,500,000,000f.

The average yearly value of the exports in each of the periods named was as follows:

	Francs.
1882-86	3,092 200,000
1887-91	3,242,900,000
1892-96	2,944.800,000

During the year of the last Paris Exposition (1889) our exports reached a value of 3,451,-700.000f. The following year they amounted to 3,457,300,000f. Last year they declined to 3,055,400,000f., affording a very clear indication of the grounds which business men have for complaint.

The prices of all classes of merchandise have generally declined during the last fifteen years, and to this cause may doubtless be attributed in some degree the decreased value of exports

It will be noticed from the foregoing that the exports of 1896 show a slight gain over the average for that and the four years immediately preceding, amounting to .80 per cent. The imports for 1896 also increased to the extent of 2.11 per cent.

While the trade of France with foreign countries has declined, her exchange of products with her colonies and those countries over which she exercises a protectorate has considerably increased. Here are the figures of the combined imports and exports for the three periods to which we have already referred:

	Francs.
1882 86	2.345,900,000
1887 91	2,933.600,000
1892-96	3,416,600,000

The imports and exports have developed in about equal ratio, the former, for the three periods. being respectively 1,211,300,000f., 1,627,500.000f. and 1,840,7 0.000f., and the exports respectively 1.144,600,000f., 1,306,100,-000f. and 1,575,900,000f.

WHERE AUSTRALIAN MEAT COMES FROM.

The capabilities of New South Wales, Australia, for the production of beef, mutton, bacon, ham, butter, cheese and other articles of food are practically unlimited, and still remain largely unutilized, from the supply invariably being in excess of the demand. With fresh or larger markets the work of production would become stimulated to any extent required, nearly the whole of the land area of the colony, that is, excluding the surface covered by rivers and creeks, and embracing something like 310,700 square miles, being eminently suitable for pastoral purposes. This extensive area may be divided into three climatic zones, namely, that comprising the whole of the coastal districts east of the Great Dividing Range, which separates the colony into two unequal divisions, and embracing an area of 38,200 square miles; the high tablelands of the range, covering an area of 84,900 square miles, and the flat country lying west of the range, with an area of about 187,600 square miles. In the first the herbage is of a rich and varied character, providing food for an immense number of high class dairy cattle, and causing dairying to become the leading industry, considerable quantities of fine butter, also of excellent cheese, bacon and ham being continually produced, the bulk finding its way into local consumption. The abundance and variety of luxuriant herbage cause immense numbers of cattle and sheep to be depastured on the tablelands previous to being sent to market or to the freezing establishments. The use of oil cake and similar cattle foods is practically unknown, both beef and mutton being grassfed. There are, indeed, few countries having an area equal to that of New South Wales where the climate is so favorable and the herbage so suitable and nutritious for raising and depasturing stock, hence the value of the colony as a food producer.—*Mark Lane Express.*

LAKE FREIGHT MATTERS.

It is quite evident from strength developed in lake freights generally during the past few days that a settlement of the strike of coal miners in Ohio and Pennsylvania would result in an immediate advance in rates and a strong market until the close of the season. But in the absence of coal shipments the market is slow of advancement, and the ore dealers, who have been making some new sales from day to day, have managed to cover them by lake freight contracts that do not represent much of an increase over the prevailing low rates. It is now more than probable that the coal shippers will be unable to move sufficient coal to meet the requirements of the northwest, but there seems to be assurance of enough grain to cause a gradual increase in freights from this time on. The general improvement in business has caused some figuring for new vessels, but negotiations as yet are only of a preliminary kind. Building will probably be confined almost entirely to steel barges.—*Marine Review.*

THE EUROPEAN CROPS.

An extensive enquiry into European crop conditions has been conducted by the Orange Judd syndicate of agricultural papers. Commercial estimates of Europe's (including England's) needs of wheat imports range all the way from 300 to 400 million bushels. The *American Agriculturist* returns indicate that Europe's wheat crops for 1895-4-3 averaged about 1,500 million bushels. In the famine year of 1891 Europe's wheat product was only 1,200 millions. The impression is gaining ground that Europe's wheat crop this year is even less than in 1891. If so, she must not only import her usual supply of wheat, but 300 million bushels more on top of that.

Europe usually produces as much rye as she does wheat. It is the bread grain of the masses. The rye crop of the principal European countries (Russia, Germany, France, Austria, Bulgaria, Roumania, Italy, the low countries and Sweden) has averaged about 1,300 million bushels annually for 1986-5-4-3. This season, according to the *American Agriculturist's* carefully compiled reports and enquiries through reliable correspondents in the countries of principal production, the rye crop of these countries cannot much exceed 875 million bushels of rye. Europe's shortage in rye is even more serious than her wheat deficit. The two crops together are apparently over 600 million bushels less than the normal.

Europe produces in ordinary seasons twice as many bushels of potatoes as of wheat. Her potato crop in the countries above enumerated is 2,850 million bushels. Due allowance for the fears and exaggerations even of its well informed European representatives still leads the *American Agriculturist* to the conclusion that only about 1,850 million bushels of potatoes will be harvested in these countries this year. Without regard to the United Kingdom or other Europe, there is a shortage of some 1,000 million bushels of potatoes.

European shortage compared with average:

	Bushels.
Wheat	300,000,000
Rye	325,000,000
Potatoes	1,000,000,000
Total	1,625,000,000

Tables giving these facts in detail for each country show the heaviest decline in rye in the countries of largest production—Russia, Germany, Austria, and France. These are also the great producers of potatoes, and here the decrease is largest. The condition of the wheat crop is comparatively of much less consequence than these enormous shortages in potatoes and rye. That Russia is alive to the situation is shown by the consideration that Government is now giving to the question of issuing an edict prohibiting the exportation of grain.

ADVANCING PRICES.

Don't hold the fear or threat of advancing prices over a customer's head in order to make a sale or to induce her to increase her purchases.

It's mighty poor business.

People have a sort of an idea that the merchant who advances prices is an enemy and a robber, even if he should be forced to do so.

They don't stop to consider the state of the market, the source of supply or anything else that may or may not affect prices.

The one they buy from is to them the price-maker. If his price advances and they have to pay it, he, in their opinion, is the gainer and they the losers.

Prices in most lines of dry goods are not likely to materially advance for some time at least.

It's hard to bull the market when all the operators are feeling bearish.

And if prices don't advance after you have assured your customer that they must, what then? She will think that you intentionally deceived her or that you wished to take advantage of circumstances to advance your prices and increase your profits.

The chances are that that customer will do her trading elsewhere in the future.

Even if prices on some lines do jump a little it's just as well not to make your customers as wise as you are on the subject; you can still sell a pair of hose for a quarter, and a good pair, too.

Let them find the difference if they are smart enough, and if other merchants' tongues wag a little too fast it will only help your business.—*Dry Goods Economist.*

TORONTO MARKETS.

TORONTO, Sept. 2nd, 1897.

BOOTS AND SHOES.—The trade in footwear is at present none too active. Manufacturers are working on samples for the spring of 1897, and travellers will soon be on the road. It is reported that a large manufacturer here has severed his connection with the sole leather tanners' combination. In this connection it is significant to note that the United States Leather Company is making a big bid for the trade of this market. Elsewhere the situation is reviewed at greater length.

Dairy Products.—A fair quantity of dairy butter is coming forward. The choice offerings find ready sale, but the poorer grades, of which there is unfortunately too large a quantity, remain in the warehouses unless sold at a sacrifice. There continues to be a barely good demand for creamery butter from the United Kingdom. The local trade in pound prints, however, has been overdone, and some dealers complain of surplus stocks. Prices are about the same as last week's basis. We quote dairy, best grades, 11½ to 13c., medium 8 to 10c, and inferior descriptions 8 to 10c. per lb.; creamery, tubs, 17½ to 18c., and prints 18 to 19c. per lb We predicted a week ago there was small prospect of the strength in the cheese market continuing unabated. The expected has happened, and the feeling is somewhat easier this week. Local jobbers are quoting 9 to 9½c. per lb. The receipts of eggs have been more than local requirements. Values continue unchanged.

Dry Goods.—The wholesale houses are filled with visitors. The prospects for trade, as reported by merchants from different parts of the country, are good. Prices of staple dry goods are, on the whole, very firm. Wholesale merchants say that in many lines repeat orders can be placed only at advanced values. The cotton companies' selling agents expect samples of new print goods next week. In the meantime there is nothing new to report in the situation.

Flour and Feed.—It is difficult to gauge the situation in the products of the flour mill. The feeling in flour is excited and the course of prices very erratic. Fluctuations in price occur almost every day. There is a strong bull movement in Manitoba patents and bakers' flour. There is a fair movement in '90 patents of Ontario make for the export markets.

Grain.—The markets have been somewhat quieter this week. There has been some reaction in price, and with the local trade quotations are several points lower than a week ago. Harvesting operations, so far as wheat is concerned, may be considered over in Ontario. The new crop of barley is described as the "worst ever grown in this province." From samples which have been received here, it is evident that the bulk of the yield is suited only for feeding purposes. There is a good demand for oats, both on local account and for export. Rye is in active demand for export and prices have advanced. Corn continues dull. It is too early in the season to say anything about buckwheat.

The stocks in store at Port Arthur on August 21st were 801,693 bushels, and there were received 98,192 bushels, and shipped 309,245 bushels, leaving in store on Aug. 28th, 600,641 bushels.

Hops—There is little activity in the local hop market at present. Growers will not generally begin to pick the new season's hops until a fortnight has passed, and until then everything may be expected to remain quiet. The following from the Waterville N.Y. *Times*, date of August 24th, has rather interesting suggestions: "The cold, wet weather still continues. A few growers began picking their West Seedlings yesterday, but are forced to suspend operations to-day on account of the rain. A visit to a yard yesterday afternoon showed that the prediction of a light yield, at least in the early varieties, will be carried out, as only about two boxes were being sacked in each setting. The later hops will, of course, yield better, but they seem to be all on the outside of the pole."

Hides and Skins.—There has been little change in the market since our last report. Values remain very firm in hides. Merchants are paying 8½c. for green hides and offer cured at 9c. We have not learned of sales at the latter figure, all the transactions of which we have knowledge taking place at 8¾c. Calfskins show little or no activity at former quotations. Sheep pelts are quoted at 55 to 60c. each, and lambskins at the same figure.

Leather.—The market cannot be called active, although there is some improvement in the situation. We refer in another column to the situation in detail. The American market is strong and fairly active. Tanners regard prices as favorable to buyers, taking into account the present values of hides. The buyers, however, do not view the situation in the same light. Jobbers are taking hold more freely, and sole cutters are taking considerable stock for immediate cutting.

Provisions.—There has been an active movement in provisions. For some weeks the movement has been large. Advices from Winnipeg indicate considerable exports to the gold regions. Stocks of the heavy cuts are small and exports from the United States are large. In consequence, a review of the situation across the border is of more than passing interest. The *N. Y. Journal and Bulletin of Commerce*, Aug. 30th, says: "With wheat over 30c. higher in less than two months dealers claim that hog products ought to move out of the rut if nothing more. Hence there has been more demand and less pressure to sell. The more confident tendency has been partly attributed to the gradual increase in the cost of hogs, consequent upon a falling off in the receipts of hogs at primary points. The colder weather West, and the less favorable prospect for corn, has probably had much to do with the stronger holding of hogs. There has been more animation in beef, a fair business having been reported for export and local account." Values are easier in the export market; and in sympathy live hogs are weaker at 5⅞c. per lb.

MONTREAL MARKETS.

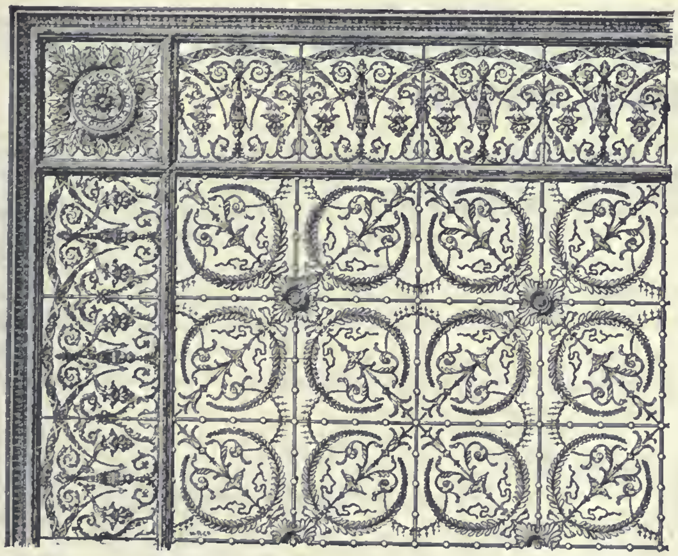
Montreal, Sept. 1st, 1897.

Ashes.—While business has not really been much more active, some American enquiry has been reported for first pots, and the market is a shade stronger. We quote: $3.10 to 3.15 for first quality of pots; seconds, $2.80 to 2.85, and few offering; pearls about $4.30.

Boots and Shoes.—There is rather more doing in this line. Most of the local factories seem fairly employed, and Quebec manufacturers seem rather busier than they were. The preparation of spring samples is already occupying the attention of a good many makers. The 4th inst. is a heavy day for payments in this line, and is looked forward to with much interest.

Embossed Metal Ceilings

THESE CEILINGS ARE MADE FROM MILD, ANNEALED STEEL PLATES, IN A GREAT VARIETY OF DESIGNS, SUITABLE FOR EVERY DESCRIPTION OF BUILDINGS, INCLUDING HOSPITALS, CHURCHES, SCHOOLS, CONVENTS, OPERA HOUSES, ASYLUMS, OFFICES, STORES, RESIDENCES, ETC.



ONE OF OUR DESIGNS

THE many advantages of their use as a modern substitute for wood and plaster, lies in the fact that they are light in weight, will not crack nor drop off, consequently no danger of falling plaster; are unquestionably durable, have air-tight joints, are easily applied, are practically fire-proof, are highly artistic, do not harbor vermin or the germs of disease, and possess splendid accoustic properties, in addition to many other points of excellence over any other form of interior decoration. . . . .

THE METALLIC ROOFING CO., Limited, KING AND DUFFERIN STS., TORONTO, ONTARIO

Phone 5481.
Write for Catalogue "No. 10."

SOLE MANUFACTURERS

Cements and Firebricks.—Since last writing a 5,000 brl. deal in Belgian cement has been put through at $1 85, and we hear of a 12,000 brl. order being booked for next spring delivery. In a jobbing way there is a moderate business doing at unchanged prices for both cements and firebricks. Receipts for the week ending to-day are 1,650 brls. of English cement and 33,000 firebricks.

Dry Goods.—There are not so many buyers in town as in exhibition week, and the excursion rates given by the railways on Aug. 27, 28 and 29th, do not appear to have favored business much, the dates being fixed too early for buyers' purposes as a rule. Some few merchants are in town from Eastern points, and the millinery openings, fixed for next Tuesday, are expected to attract a fair number of visitors from surrounding districts. Travellers are mostly off their routes, and a good many of them in Toronto at the moment to meet customers visiting the exhibition. City trade is beginning to pick up a little with the return of citizens and their families from country and seaside. There is nothing specially new in values, except that the mills seem overloaded with flannelettes, and have been offering cut prices for round lots.

Dairy Products.—There was some further gain developed in the cheese market after last writing, but some tendency to droop has been manifested the last few days, though cable quotations are still unchanged from last advance. Holders, however, are seemingly disposed to concede a little, and probably 9¾c. is now a fair limit for fine Western; Townships, 9½ to 9⅝c., and Quebec, 9⅜ to 9½c. Shipments continue liberal, though last week's figures are behind those of corresponding week in 1896, being 79,733 boxes, as against 95,778 boxes last year. The aggregate for the season so far is however, over 200,000 boxes ahead of last year's big figures. The demand for butter has slowed down somewhat, and values are hardly so firm, though choice creamery is fairly strong at 19½c.; Townships' dairy, 14 to 15c.; Western do., 11 to 12½c. Eggs are experiencing more active demand, especially for export, and 13c. is given as a quotation for choice stock.

Groceries.—The general country demand is reported to be picking up a little, and the feeling as a rule is one of hopefulness in the future. Sugars are still moving pretty briskly, and the refinery figure is firmly held at four and a sixteenth cents per lb. for round lots of standard granulated. There would probably be further advance, but that some samples of German and Austrian sugar, of rather better quality than former offerings, are being shown. The European market for raws is reported firmer, despite the promise of a large crop of beets and other factors calculated rather to depress the market, and the supposition is that what refiners term "the invisible supply" of raws, is becoming exhausted. The lowest figure for yellows at refinery is 3 5-16c. The present demand for molasses is rather dull; quotations are for Barbadoes 24c. per gallon in single puncheons, barrels 26½c., half barrels 27½c.; Porto Rico a cent higher. Teas are hardly in as active demand as expected, but country stocks are reported low, and values generally steady. The stiffening in canned vegetables continues, owing to the unfavorable season; some canners decline to quote below 78c. for tomatoes. Lobsters are scarce and dear, $9 being asked for ordinary brands, and $10 50 to $11 for choice. On the other hand salmon is very cheap, sales being reported on the coast as low as $3 25; last year's pack is being jobbed at $1 25, new to arrive $1.12½ to 1.25 as to brand. Advices from Denia report an advancing market for Valencia raisins, and in a jobbing way 6c. per lb. is being asked for best brands of fine new off stalk, and 5½c. for ordinary. Some lots of new currants are on the way via Liverpool, and prices will be fully 50 per cent. higher than last year. First direct supplies will be here about 1st October. There seems to be some derangement in the market for California raisins, and local agents have been instructed to withdraw quotations for the moment; the last transactions reported were on the basis of 4¼ to 4½c. for three-crown, on coast. Dried apricots are firm; peaches firm and rising. New California prunes are due here next month, and are quoted on coast at from 6¼c. downwards, as to size.

Leather.—An absence of any heavy buying is still reported, but moderate sales of sole and dongola are reported. The latter line is inclined to strengthen; the American market is lately advanced a cent, and raw goat skins are costing more money, with holders very firm in their ideas. The demand for ordinary black leathers is dull locally, but stocks are light, a good many western tanners shipping all their make to England, and values are steady. We quote:—Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 21 to 24c.; Quebec do., 16 to 17c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—The week has developed nothing of special interest, no important business having transpired. The principal feature is the continued advance in lead, another rise of 2s. 6d. being cabled from London, and 3½c. is the present lowest quotation for large lots. Copper also is rather firmer; tin steady. In pig iron business has been rather

The Ontario Mutual Life

Established 1870

Head Office, WATERLOO, ONT.

THE OLDEST, LARGEST, STRONGEST AND BEST LIFE COMPANIES IN THE WORLD ARE MUTUAL COMPANIES.

This Company holds its Reserve on the Actuaries' 4 per cent. - - - - - - **$20,000,000 in Force**

RESULTS TO POLICYHOLDERS UNEQUALLED.

The net surplus results under the company's first quinquennial policies declared in 1896, were 10 per cent. higher than the estimates put in the hands of the Company's Agents for canvassing purposes in 1891.

Attention is invited to the Company's 20 year Survivorship Distribution Policy now offered, which embraces all the newest features and is the best form of *Protection* and *Investment* money can buy. It has no equal. Guaranteed values, attractive options, and liberal conditions.

Special Features: 1. Cash and Paid-up Values guaranteed on each Policy. 2. All dividends belong to and are paid to Policyholders only. 3. No restriction on travel, residence or occupation. 4. Death claims paid at once on completion of claim papers.

MONEY TO LOAN on improved farms, church property, &c., at lowest current rates. Terms of re-payment easy. Costs low. Debentures purchased.

quiet; we hear of a 100-ton sale of Hamilton iron to an outside point, and a few car lots, but Scotch iron seems quite neglected. We quote:—Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $16.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13 00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D. Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 50 to 3.60; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.—An improving demand is noted in these lines, which will likely continue for the next couple of months. As a result of the firmness noted last week in linseed oil, prices have been advanced a cent. Turpentine has also recovered the loss of a cent, and is again up to 44c. for single barrels. Fall stocks of glass are now beginning to arrive; prices are firmly held, and the situation in Europe is reported strong. The demand for Paris green has ceased for the season, and we drop quotations. We quote:—Turpentine, one to four barrels, 44c.; five to nine barrels., 43c., net 30 days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels., 42c.; boiled, one to four barrels, 46c.; five to nine brls., 45c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 9½ to 10c. as to quantity. Leads (chemically pure and first-class brands only), $5.25, No. 1, $4.87½; No. 2, $4.50; No. 3, $4.12½; No. 4, $3.75; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; window glass, $1.30 per 50 feet for first break; $1 40 for second break; third break, $2.90.

WOOL.—The situation is quite as strong as last noted. Latest advices from the Cape show further stiffening, and the stock to be offered at the next series of London sales, fixed for the 28th inst., is much smaller than usual. Supplies are also very low on spot, and holders, very firm in their ideas, asking 15½ to 17½c. for Capes, and nothing under 30c. for B.A. scoured. Of Australian there is none here, nor is there any domestic available. No North-West wool has come here this season.

WHICH PAYS BETTER?

The New York *Times* says: "We made a brief comparison last week to show what a different condition presents itself this year to the minds of the people of those agricultural States that voted for Bryan last year, in the desperate expectation that they might thus lighten the burden of hard times and of debt. We now submit a few figures to show the changed condition that must have its influence on the minds of the people of the silver-producing States, whose representatives in the Senate have for so many years exercised such great power upon legislation, always in the hope of securing advantage for the product of their mines. The change is in the price of silver and in the price of wheat, and the figures show that at the present export price of wheat the crop of these States, without reference to a certain increase since 1895, is worth within a fraction as much as their silver was worth in 1893, and worth over 50 per cent. more than their silver at current prices.

"The following table shows the output of silver of the various States for 1893, and their crop of wheat for 1895:

States.	Silver, Fine ounces.	Wheat, Bushels.
Arizona	1,147,204	250,654
Colorado	23,281,399	2,808,250
Idaho	3,288,548	1,221,899
Montana..........	12,820,081	1,065,223
Nevada	1,035,151	122,627
South Dakota	58,973	29,261,088
Utah	5,891,901	2,443,596
	47,523,257	37,173,337

"The average price per fine ounce of silver paid by the United States Treasury in 1893 was 80c. At this price the silver output of that year was worth $38,186,056. At the present price of silver, 50c. per ounce, the same amount of silver would be worth only $23,861,628, a fall in value for the year's product of $14,156,977.

"In 1895 the average export price of wheat was 57½c. At that price the crop of that year, 37,173,337 bushels, was worth at the seaboard $21,374,668. At the present export price of wheat, $1, the same crop would be worth $37,173,337, an advance in value of that year's crop of $15,798,669. The wheat in 1897 is thus worth $37,173,337, the silver is worth $23,861,628, and the difference in favor of the wheat is $13,311,709, or 55 per cent. more than the value of the silver."

FINES FOR CARRYING PASSENGERS.

From the Marine Review.

The announcement from the Sault that revenue cutter officials on the river were preparing to take special measures for enforcing the law against passengers on freight vessels was not attended by regrets from vessel owners. Notwithstanding the low freights of the present season, the abuse of passenger privileges has been carried to an extreme unheard of in previous years, and the vessel owners, who have been powerless in their efforts to curb this evil, on account of circumstances that surround requests made upon them, would be pleased to hear of some of the vessels being fined. Managers of the regular passenger lines, whose business is injured on account of the general practice of carrying passengers on the freight steamers, are understood to have instituted the complaint that has resulted in the government officials taking up this matter on the St. Mary's River.

THE BIG CITIES.

Estimates of population of cities and towns in the United States having one thousand or more inhabitants, according to the census of 1890, have been received at Washington in response to a circular sent by Dr. Wyman, of the Marine Hospital Service, to the health officials of those localities. The estimates were asked for as a part of desired data bearing on the statistics of mortality and morbidity in the country, but it is needless to say that they have an interest for people outside of the class of sanitarians and pathologists. This is particularly true as regards the larger cities. The figures compiled, which are for the year 1896, seem to indicate that Chicago has made the largest increase in population in the interval since the last national census. Its population is given as 1,619,226 in 1896, as compared with 1,009,850 in 1890. New York seems to have made the next greatest gain among the large cities, its population being put at 1,995 000, as against 1,515,301 in 1890. Brooklyn comes next, having increased its population from 806,343 to 1,100,100. Philadelphia shows an advance from 1,046,964 to 1,188,793. St. Louis shows a gain from 451,770 to 570,000, Boston from 448,477 to 516,305, and Baltimore from 434,439 to 506,378. These represent the cities having a population in excess of 500,000. Noteworthy gains are shown by some of the cities falling below that figure, in certain instances more notable proportionately than those shown by some of the larger ones.—*Bradstreet's.*

INDUSTRIAL PROGRESS IN JAPAN.

The Philadelphia *Ledger* says: "The bogie of Japanese cheap labor, about which so much was heard during the debate in Congress on the Dingley tariff bill, promises to rapidly become, if it has not already become, as illusory as any other phantom. In this connection it is interesting to note that Japan is importing cheap laborers from Corea to work in her coal mines. Five years ago the wages of carpenters were 33c. a day. Now they advertise that their wages have risen to 80c. a day—say 1s 8d. (40c. in United States currency). The cost of living has nearly doubled in five years, and the cost of labor has risen in proportion. Rice in 1890 was $4.90 a koku; to-day it is $8.90 to $9.10, about $4 90 in United States money."

—The lightest known solid is said to be the pith of the sunflower, with a specific gravity of .028, or about one-eighth that of cork. The sunflower is extensively cultivated in central Russia, and various uses are served by its different parts, the recent discovery of the lightness of the pith increasing the commercial value of the plant. For life-saving appliances at sea, cork has a buoyancy of one to five, while with the sunflower pith one to thirty-five is attained. About 800 cubic inches of it would weigh as much as 1 cubic inch of iridium, the heaviest metal.—*American Machinist.*

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

TEN DOLLARS A MINUTE!
This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the
METROPOLITAN
Life Insurance Co. of New York
Assets, ... $25,592,003 78
The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No Initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assesaments—no increase ot premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.
Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for trom $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

A PHASE OF MODERN INDUSTRY.

A factory engaged in making pressed tinware and similar products has more than usual interest for the student of modern industry. The almost indefinite number of products made in a factory of this kind, involving a vast expenditure of money for plant, and a mastery of details on the part of the employer, renders success very difficult in this department of manufacture. The Kemp Manufacturing Co., Toronto, however, appear to have overcome the difficulties in the way of advancement, and their factories covering in space almost an entire block within the city limits, bespeak volumes for the energy of the company's management. A description of the goods made by the Kemp Company would occupy the pages of a book—if not a library– as the following mention of some of the various sections will show. The departments, which are subject to sub-divisions, are as follows: Diamond granite steel and white enameled wares, stamped ware, tinners' trimmings, japanned ware, toys, pieced tinware, milk cans, heavy polished ware, embossed ware,sheet iron and steel ware, galvanized iron ware, coal hods and vases, stove shovels, stove pipe, elbows and dampers, stove boards, copper ware, thimbles, oil stoves, machine oilers, spoons, lanterns, wire goods and bird cages, and many others.

We are accustomed to use the contrivances that have been made for our domestic comfort without much thought as to the source of their production. But in the evolution of the teapot there is much that will interest the man who is without even the simplest knowledge of mechanics. Lack of space will unfortunately prevent any description of the interesting processes of manufacture, and confine us to a reference to some of the special phases of a tin and stamping works. When shipments must be made long distances, as is so often the case in Canada, it will readily be seen that stovepipe which can be packed, twenty-five joints in a closed crate which is large enough to hold only one joint of ordinary stovepipe, means a great saving in freight charges. The Kemp Company by a patented method of rolling the pipe have been able to secure this desirable end, and more than that, the pipe can be put together by any person without rivets or tools; it is uniform in size, and being crimped at the small end the joints fit closely together. In this connection it is interesting to note that by the same firm a one-piece elbow is made, which has a most attractive appearance. The design of the crimp is the secret of the success of the elbow, which is the product of specially made machinery. The price is not greater than that of the ordinary pieced elbow.

In the industrial development of the past few years, progress in the manufacture of enameled ware has made remarkable steps; goods which were retailed in the year 1890 at $1.25, now being in some instances but 30 or 40 cents. The reduction in price through competition led to improved methods of manufacture, and the improvements in making the ware led to still further reduced prices. It speaks well for the industry that in spite of this radical fall in prices, no deterioration in the quality of the goods has taken place. Instead of showing depreciation in quality, the diamond, granite steel and white enamelled wares of the Kemp Company, although sold at less than half the prices, possess far more utility and have a much better appearance than the goods formerly sold by the trade.

CURIOUS WALKING STICKS.

Walking sticks were first introduced into fashion by the effeminate Henry II. of France, but did not become a requisite appendage to the gentlemen of fashion in England till the year 1655, at which time they were formed with an indented head, in order to afford a more easy pressure of the hand which they supported.

Ingenuity, which in matters of fashion is ever on the alert, now crowned it with the addition of the round and hollow top, which sometimes contained nutmeg or ginger, to warm the stomach of the valetudinarian, and sometimes sugar candy for the asthmatic. But snuff soon after coming into universal use among the bon ton of society, the cavity was exclusively appropriated to its reception, and the meeting of two friends was invariably marked, after the first salutation, by the unscrewing of the tops of their walking sticks.—*The Portfolio of Origins and Inventions.*

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

SALVAGE MONEY FOR ASSISTING DISABLED VESSELS.

From Cassier's Magazine.

Owing to the high salvage money obtained for rendering assistance to a disabled ship at sea, many steamers and sailing vessels carry on an irregular sort of "wrecking business" by always being on the alert for stranded ships. A tramp steamer that could bring a great transatlantic liner into port in a disabled condition would realize more money than its owner would make in a trip across the sea with a full cargo. As an illustration of what salvage money is paid for towing steamers into port, mention can be made of a few conspicuous cases. In 1882 the "City of Richmond" was towed into Halifax Harbor, and cost her owners $35,000 in salvage money. In the same winter the "City of Boston" broke her shaft at sea, and her owners were compelled to pay a bill for towing and other aid of $46,500. When the Atlantic liner 'Paris' broke down off the Irish coast in 1890 she was towed into port at an expense of $30,000

So rich are these prizes that the coast wrecking companies frequently send powerful tugs to sea just after a storm in search of disabled vessels. If a steamer is several days overdue the tugs may go hundreds of miles off the coast, and in this sense the companies extend their labors into new fields, practising wrecking upon the high seas.

—Logging operations on the Ottawa and tributaries in Canada have usually afforded employment for 5,000 to 6,000 men. Now that the United States tariff imposes a duty of $2 a thousand on rough pine, it is proclaimed that operators feel so hard hit and discouraged that they will put no more than 500 men in the woods this season. That means a prodigious reduction of import that will not damage American markets any. The loggers who have heretofore depended on the Ottawa district for a job will have to emigrate to the United States or go to the Klondike. Our sympathy will first have to begin at home. Lots of peope have been out of employment on this side of the line because 5,000 men were turning out cheap Canada logs, to be converted into cheap Canada lumber, which competed with our own in the eastern market. If the Dingley bill has reduced the Ottawa River logging force from 5,000 to 500 men, it clearly shows that the protection feature of the new tariff bill does indeed protect.—*N.W. Lumberman.*

—Some time ago at a fashionable salon, Baron d'Almerie was one of a group to whom he was imparting an account of his pedigree, which, he claimed, was derived from the Pharaohs of Egypt. Just then Baron de Rothschild approached the group, and one of its members called out: "Baron, come and let me make you acquainted with the Baron d'Almerie. He comes of Pharaonic stock, and you ought to know each other." "Yes," said Baron de Rothschild, bowing gravely. "I think," said the Baron d'Almerie, "you should know our family, as your ancestors took from us certain pledges when they decamped from Egypt." "True," replied Baron de Rothschild, "but those pledges were redeemed by a check on the Bank of the Red Sea!"

—The *Globe's* Ottawa special says: A bounty of $3 per ton is to be paid on all steel ingots manufactured in Canada after June 28, 1897, and for five years thereafter, from ingredients of which not less than 50 per cent. of the weight consists of pig iron made in Canada. Regulations respecting these and also the bounties of $3 a ton on puddled iron bars and $3 a ton on do- now being promulgated by the Customs mestic and $2 a ton on foreign pig iron are Department.

—A Montreal paper states that about 4,500 shares of the famous Le Roi mine, British Columbia, are now owned in the Province of Quebec; the stock is now quoted at $8. Further, Mr. A. W. Morris wired to Spokane the last payment on the famous Twin mine, which is held by a syndicate of wealthy Montrealers.

SELLING GROCERIES.

To-day in all lines of groceries the standard brands of goods are being cut in price, so it is almost impossible for a grocer to get any profit from them whatever, consequently he has got to handle his own brands and push these rather than push the goods of someone else. It is an easy matter to have his goods packed under his own label, but he must be careful to get the best goods. Get the goods that the people want. Don't hesitate to spend a few more cents for quality, as it is really economy. No one then can come into your store and say: "I can buy these goods at ——'s store at a lower price," consequently there is no competition. In pushing your own brands of goods you have an advantage over a cutter, because you shut him out, as he is not handling the goods you handle. If the cutter, though, is selling, say, a certain brand of corn which the people want, you must get it. They may not find anything else in the cutter's store to please them, and it may just be a matter of selling corn to them to catch the rest of their trade.

LAKE COAL SHIPMENTS DURING 1896.

The Marine Review.

The chief inspector of mines for Ohio, who conducts at Columbus a bureau devoted to this service, includes in his annual report each year a table giving anthracite and bituminous coal shipments from all ports on Lake Erie. This annual summary of the lake coal trade is not absolutely correct, as the inspector is forced to depend upon collectors of customs for a part of the data, and the customs regulations on the lakes are in some respects unsatisfactory when applied to the collection of statistics. The figures are, however, the best that can be secured, and there is little danger of great discrepancies in them. An advance summary of the table is as follows:

"Shipments of anthracite and bituminous coal from all Lake Erie ports, Buffalo to Toledo inclusive, during the season of 1896, amount in the aggregate to 8,941,327 net tons. Of this 3,175,722 tons anthracite and 5,763,605 was bituminous. The latter includes coal taken on for fuel by steamboats trading to the several Lake Erie ports. By a comparison with the preceding year the bituminous shipments are found to represent an increase of 1,543,692 tons. The footings also indicate a gain in the total shipments of 162,093 tons over 1895, and an increase of 2,072,070 tons when compared with 1894. Of the bituminous coal sent to the lake ports during the year, 4,337,815 tons was from mines in Pennsylvania, 1,267,035 from Ohio, 159,117 from West Virginia and 1,638 from Maryland. These shipments from Pennsylvania represent a gain of 1,755,828 tons, which is equal to 75.2 per cent. of the entire year's shipments, as against 61.1 per cent. during 1895, 65 9 per cent. during 1894 and 49.9 per cent. during 1893. The Ohio fields furnished 1,267,035 tons, which is a loss of 99,679 tons as compared with the preceding year, and a loss of 301,877 tons as compared with 1894. It is also a loss of 861,330 tons when compared with 1893. By reviewing a comparison of the percentages of Ohio coal received at the lake ports during recent years, it is found that during the past year it formed 21.9 per cent. of the entire shipments of bituminous coal, as against 32.3 per cent. in 1895, 28.8 in 1894, 46 in 1893 and 25 in 1892, which indicates that during the past three years the percentage of Ohio coal which originated in Ohio mines has decreased 24 per cent., while the quantity from Pennsylvania has increased 25.3 per cent."

RIVETING WITH COMPRESSED AIR.

In regard to riveting with compressed air, the master mechanic of the Santa Fe road is quoted as saying that by the use in the Santa Fe shops of a stationary riveting machine three men are enabled to drive 2,000 rivets per day of ten hours at a cost of $4.75, as compared with 200 rivets per day at a cost of $7 by hand labor; the truck riveters—the machine being operated by two laborers at a total cost of $3 per day—drive 3,000 rivets, as compared with 175 rivets driven by hand labor by three men in a day at a cost of $6, while the staybolt breaker makes an average saving of $8 a day, and the tank riveter an average daily saving of $10. Further the mud-ring riveters will drive as many rivets as can be handed to them, and will make a saving of $12 to $15 a day for that class of work. Not only is this method credited with the great saving named, but it is declared to insure every rivet hole being filled entirely and insures tight work, while of hand-driven rivets in mud rings a large percentage invariably leak.

LAKE FREIGHT MATTERS.

The Marine Review.

Although the improvement in lake freights, which has been confidently expected every day for two weeks past, is slow of development, there is not a particle of doubt now of profitable rates during the last three months of the season. Within the past ten days sales of iron ore have been quite heavy. The purchases have, in fact, been largely in excess of the expectations of the ore dealers, and the market has reached a point on some ores where the producers are unwilling to sell at prices that prevailed earlier in the season without first being certain of arrangements regarding lake freights. Sales have been made to furnace men who made extensive purchases early in the year, as well as to those who provided only sparingly for their wants. With assurances of more than an average movement of grain, it would seem that a settlement of the coal strike is now all that is necessary to cause higher freights all along the line, and it is more than probable that the coming week will bring a moderate advance, even under present conditions.

RUSSIA'S PLATINUM OUTPUT.

The Russian Ministry of Finances has recently issued a report on the production of platinum in Russia, according to which that country stands first in the world for this production, forty times the quantity produced by all other countries together being obtained there. In the year 1880 the quantity produced amounted to 2,946 kg.; in 1895 it reached 4,413 kg. The production had gone on increasing up to last year, when it diminished on account of the wet weather in summer. This rare metal is found exclusively in the Southern Ural. The manner of its being worked up is unknown in Russia; this is done in Germany, to which country the platinum is exported in a crude state. Whatever Russia requires of worked-up platinum it has to buy back from Germany. Of late years the price of this article has run very high; at present it is 900 marks (about £45) for 1 kg. of crude platinum in Russia. On mining for the platinum the still rarer metal iridium is also found, but only in very small quantities. Last year the total quantity of iridium obtained did not amount to more than 4.1 kg., and this was only slightly exceeded in 1894.

PROSPECTS FOR COTTON.

H. M. Neil has issued a circular on the growing cotton crop, in which he says: "At this moment, for this year, the promise is equal to any previous year in every State but Texas, and on the present acreage, even allowing that Texas should fall short of her maximum production per acre by 1,000,000, the outlook now is for a crop of at least 9,750,000, with 500,000 to 1,000,000 more within the range of possibilities. The figure of 9,750,000 is really very conservative, for a product per acre outside of Texas equal to 1894-95 would give 7,350,000 bales, and a maximum for Texas would he 3,950,000 bales, from which, allowing 1,000,000 off, you would have a crop of 10,300,000 bales. The crop is so far advanced from recent rains and heat that it will reach maturity and be independent of frost at an unusually early date, and should we soon have goods rains in Texas her crop also would be near perfection, and the possibilities for a total crop would then be something enormous."

—A large cotton mill is now in course of erection at Hangkow, Siam, the engines and machinery all being supplied by German manufacturers. The mill buildings are being built by a Chinese contractor, and are expected to be completed shortly.

RAILWAY OWNERSHIP.

As indicative of the divergent opinions in connection with the State ownership and operation of railways, a recent transaction is of interest. On the first of July the State Council of Switzerland, by a vote of 25 to 17, passed a bill authorizing the repurchase by the Confederation of all the principal railways in the country, including the St. Gothard line. Probably no country in the world can furnish such accurate information concerning the operation of railways as is accessible to Swiss legislators, and yet the sentiment in connection with State control is continually changing. One council passes a resolution to sell and a succeeding council to buy, and this in a country so circumscribed in area as to make it possible to obtain the fullest information on the subject under consideration. It is evident that in Switzerland, as in this country, the question presents a choice of evils, and here at all events it would appear to be the part of wisdom to "rather bear those ills we have than fly to others that we know not of."

PARAGUAY'S FOREIGN TRADE.

The London *Chamber of Commerce Journal* says: "Referring to the countries of origin of the principal imports into Paraguay, the British Consul at Asuncion states that the greater part of the cotton goods, wire, corrugated iron and a few tools and agricultural implements come from Great Britain. So far as drills and other cotton fabrics for men's wear are concerned, however, as well as Oxfords and other colored woven goods. the supplies are chiefly from Germany and Italy."

—A great dead of capital is being invested in the oil fields of the Islands of Sumatra and Java. Last May the East Indian Exploration Company was organized at Amsterdam, with a capital stock of 300,000 florins, to develop a tract of oil land comprising 35,000 acres in the residency of Samarang, Java. On an area of 500 acres, which is explored so far, more than 40 natural oil wells were found. Experts entrusted with a preliminary investigation rendered a glowing report as to the productivity of the oil field. The latter is located in the districts of Singendul, Singenlor, and Manggar of the residency named, in the immediate neighborhood of the railway station of Telewa, the railway intersecting the field at several places. The "Petroleum Maatschappij Mocra Enim," which was organized recently at Amsterdam with a capital stock of 10,000,000 florins, is the successor of a syndicate formed in 1895, and composed of the Bank of Paris, Berliner Handels-Gesellschaft of Berlin, and Messrs. Labouchere, Oyen & Co., of Amsterdam. This syndicate has secured concessions on large tracts of land in the residency of Palembang, Sumatra.

—A committee has been appointed by the British Board of Trade to consider the best means of bringing British manufacturers and merchants into touch with the colonial markets. With this end in view it has been suggested that samples of the goods most in demand should be sent to the Old Country. This is a capital idea, and, if adopted earlier, might have saved the Old Country the loss of a lot of trade. In many lines Canada uses United States instead of English goods, because the United States manufacturers give the Canadians what the Canadians want, and the English manufacturers refuse to modify their products to suit the taste of the purchaser.

—There is a very considerable demand for British machinery, locomotives, rolling stock, etc., springing up in Norway. Last year the country's imports rose from 89,500,000 kroner to 101,000,000 kroner, the increase being almost entirely due to the heavy demand for railway material and machinery. According to one correspondent in Norway, this year will show an even greater increase.

50 YEARS The Year 1897 is the SEMI-CENTENNIAL

ST. JOHN BOARD OF TRADE.

At a meeting of the St. John Board of Trade held on Monday last, the president, Mr. W. S. Fisher, gave an account of his visit to England and the action he took in reference to St. John interests. Mr. Fisher received a hearty welcome from the secretary and members of the London Chamber of Commerce, and received at their hands various marks of hospitality. While in Liverpool and London he called upon a number of the steamship companies and marine insurance underwriters and brokers and discussed the position of the port. Operations through St. John during the past two winters have been closely watched, he says, "and have certainly been the means of directing the attention of steamship people generally toward us."

He had also several interviews with Mr. Wm. Peterson, of Peterson, Tate & Co., contractors for the new "Fast Line," who stated that his arrangements for carrying out the contract were proceeding very satisfactorily, and that before long he expected to visit Canada, and at the same time would come to St. John to look over the port and see for himself the position of affairs and facilities we have to offer.

In reference to marine insurance a good deal of discussion took place earlier in the year over a so-called "discrimination in marine insurance rates" on goods coming here, as compared with other American seaports. "I did my best to get at the facts in this matter, and for this purpose interviewed a number of marine insurance underwriters and brokers. While there was some variation of opinion among the gentlemen I met, I am convinced that there is little, if any, foundation for the statements made." The president spoke of the work that is being done by the C.P R. in the way of distributing material relating to the resources of Western Canada, and declares it cannot be too highly commended. He urged the city and the New Brunswick Government to send abroad literature about St. John.

In conclusion, Mr. Fisher referred at length to the pulp business, and to enquiries on the subject he had made when away. The material used for the manufacture of the article in Norway and Sweden is fast becoming scarce, and Mr. Fisher stated that there were great opportunities to increase the trade in this country.

BUTTER AND CHEESE ASSOCIATIONS.

A meeting of the Advisory Board of the Butter and Cheese Associations of Ontario was held on Tuesday last. The following directors were present: D. Derbyshire, president; R. G. Murphy, secretary; R. M. Ballantyne, A. F. McLaren, Aaron Wenger, John S. Pearce and Henry Wade. Prof. Robertson was also present and gave some valuable hints.

On the subject of taking joint action by the two associations in regard to the employing of foreign speakers for the coming annual meetings, it was decided that it would not be in the interest of the general dairy public that joint action be taken.

The question of the judging of butter at the Industrial Show was taken up. Some difficulty having arisen over the awarding of the gold medal prize for creamery butter, the board decided that the judgment of Mr. Bryce, the judge on butter, be concurred in.

Mr. Mark Sprague, instructor, was called upon for a report of his work west of Toronto, which was very satisfactory. A good deal of discussion was indulged in over mapping out the work of the future, after which the board adjourned to meet at the call of the president.

Address, Nelson, B.C.

Mercantile Summary.

From Quebec we hear of the failure of J. V. Plamondon & Co., manufacturers of shoes, with liabilities estimated at from $12,000 to $15,000. They were in trouble also last fall, when a settlement was made at 40 cents on the dollar.

In Kentville, Nova Scotia, there are two shops, one public hall, and fifteen or twenty dwellings in course of erection, metallic sheathing being used for the two largest of the Foresters' Halls. The Lloyd Manufacturing Co. are also building an addition to its works.

The failure and assignment is reported from Ottawa of Rogers & Son, undertakers, etc., whose embarrassment is due to the recent defalcation and absconding of Mr. Hubbell, of the firm of Rogers & Hubbell, stock brokers, which we commented on weeks ago.——Mrs. E. Graham, milliner, of the same city, has also assigned.

The general store firm of E. N. Hurtubise & Co., of Casselman, Ont., has gone into insolvency. The business was started some years ago as a branch of A. L. Hurtubise & Co., large hay and produce men of Montreal, who failed disastrously a year or two ago.——The assignment is also reported of Alex. George, hotel keeper at Huntley, Ont, with small liabilities.

A Montreal man, Mr. W. B. Chapman, has secured a charter and franchise from the Jamaica Government to build electric tramways on the island, which will need $500,000 capital or more. Montreal and Halifax capitalists are to furnish most of the money. The earliest construction will be in the city of Kingston and its suburbs. A large power-house will be built on the foreshore and electric lighting will also probably be provided.

After dealing in coal and wood for a number of years in Toronto, Samuel McAdam began lumbering at South River, and although he has been six years in the business he did not succeed in making money. Indeed, his affairs became so hopeless that in 1893 he was obliged to mortgage his assets. Not being able to recover them since, he now assigns.——Another assignment is that of Miss M. Patterson, who is a milliner in Stratford. Her business experience dates back to 1891. After six years she finds that she owes $2,300 and has only $1,700 of nominal assets to pay it.——Previous to October, 1895, Wm. Gibbons had been a clerk for A. J. Shaw, grocer, in this city, whom he at last succeeded. Gibbons' position has never been strong, and this month he is obliged to assign.

From Nova Scotia we hear of the following failures: Lawrence Wallace, clothier in Halifax, has assigned. He failed before in 1885, when the estate was bought back for him, and he did fairly for a time.——At Hay River, H. R. Beaton began storekeeping just about a year ago. He had previously been a school teacher, and knew little of business, so that his failure is no surprise.——John Zwicker, a shipbuilder and trader at Mahone Bay, has assigned over his estate. He has been long in business, but never achieved much success.

The vice-president of the Canadian Pacific Railway expressed to a Montreal reporter, on Tuesday, his surprise at the change that had come over the people since he had last visited the West. At the present time, everyone met with from Port Arthur to Vancouver was filled with a well-justified assurance of good times ahead. The Crow's Nest Pass road, he says, is being pushed quite rapidly. He had driven about 109 miles from Lethbridge to the summit of the Rockies, and 3,000 or 4,000 men are at present engaged in the work.

We learn with regret of the death, in Victoria, on Monday last, of Mr. Alexander Begg, editor of the British Columbia *Mining Record*, in his sixty-fifth year. He was born in Quebec, and was at one time private auditor and Queen's printer of Manitoba. He was well known in Toronto, from having years ago been connected with the Manitoba exhibit. He was immigration agent for the C.P.R. in London, Eng., for some time, and was the author of a "History of the First Riel Rebellion," and "The History of the North-West Territories." Mr. Begg had an excellent knowledge of our western country, and had done good work for Canada during many years.

Moise Menard, who has long done a moderate general business at St. Justine de Newton, Que., has been obliged to assign. He has been postmaster many years, and has also filled the positions of municipal secretary of schools, etc., but he has been commercially handicapped by a large family, and late serious sickness.——J. Meikle, a recent beginner in business at Little Metis, Que., has made a voluntary assignment. He last year succeeded John Canday, who by notarial deed transferred his small premises and stock, conditional on being supported during the remainder of his life.——A. Silver, a clothier in a small way at Lachine, has abandoned his estate.——Tremblay & Larouche, sawmill men, of Mille Vaches, Que., in the Saguenay district, have put their affairs into the hands of the assignee.——W. A. Richardson & Co., a firm of hotelkeepers, Sherbrooke, Que., have suspended payment, and are about calling a meeting of creditors.

Wholesale Business
FOR SALE.

An old-established and lucrative business in Toronto is offered for sale on very favorable terms. The capital required would be about $30,000, and would return fully 25 per cent. net per annum. No charges for good will, but stock-in-trade is to be taken at market cost price. No liabilities and practically no opposition. The business would be transferred as a going concern with the present connections. The books are open for inspection to an intending purchaser. The only reason for selling is that the proprietor, having made an independence, wishes to retire from business.

It is seldom that so good an opportunity is offered for the purchase of a good paying business.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

Customs collections at the port of Montreal for August this year were $580,958, as compared with $589,745 in the corresponding month of 1896.

The East York and Markham Agricultural Societies fall fair will be held this year at Markham, on October 6th, 7th and 8th; W. H. Hall, secretary-treasurer. The prize list makes a pamphlet of 36 pages.

Owing to their inability to arrange a settlement, Messrs. Tees, Wilson & Co., wholesale teas, Montreal, have assigned over their estate to one of their principal creditors, and the business will be wound up.

It is announced that Geo. E. Van Buskirk and Robert Bauld have entered into a co-partnership to carry on the coal business in Halifax. The new firm is arranging to secure suitable wharf and store premises.

The Scotia Steamship Company is applying for incorporation in Nova Scotia, the applicants being F. J. Phelan, George Musgrave, Jas. T. Hamilton, Jos. P. Henderson and Thos. Mitchell. The capital stock is to be $25,000. The company proposes to run a steamer to Porto Rico.

The city of Three Rivers was unusually full of people on the occasion of the St Lawrence Valley Exhibition, which opened on Thursday of last week, and continued for several days. There was an excellent display made there of the agricultural and industrial products of the North Shore district.

– W. T. Costigan, of Montreal, doing business as W. T. Costigan & Co., commission merchants, and also as proprietor of the Sclater Asbestos Manufacturing Co., has made a joint assignment of the two businesses, the liabilities of which are approximated at $108,000.

As a result of the embarrassment and probable assignment of W. T. Costigan & Co., general commission merchants, Montreal, Messrs. John Costigan & Co., coal and wood merchants, have been obliged to make a private settlement with their principal creditors, on the basis of 65 cents on the dollar, it is understood.

The affairs of the T. E. Howard Company, wholesale dealers in brass and fancy goods, also bicycles, etc., in Montreal, have been undergoing investigation, with the result that they have not been found in such strong shape as they imagined themselves to be in, and a demand of assignment has been made upon them.

A demand of assignment has been made upon H. B. Muir & Co., a comparatively young firm of woolen jobbers in Montreal. Mr. Muir was formerly contracting freight agent for the Central Vermont Railway, and started this business three years ago. Complaints have been heard from time to time of his modes of settlement, and he is reported to have bought an interest in a collection and detective agency a short time ago, which was regarded as a very poor investment.

A New York despatch of last Friday stated that the Commercial Cable Company announced the opening of its new cable line via Hayti and Para to Brazil, Uruguay, Paraguay, and the Argentine Republic, together with a reduction in cable tolls to all the points named. The tolls from New York to Rio Janeiro, Bahia, and all other points except Para, Brazil, are $1.20 a word under the new schedule, against $1.35 under former cable schedules. The rate of Para is $1 a word, against a former rate of $1.35.

The boot and shoe business of R. F. Nagle, at Smith's Falls, has been sold to Crawford & Hamilton, two young men from Toronto. Mr. Nagle will confine himself to selling on the road for a Montreal boot and shoe house.

The death took place in Montreal last week of Mr. Robert Mitchell, head of the Robert Mitchell Company, brass founders and gas-fitters, who was in the 76th year of his age. Mr. Mitchell was a native of Scotland, born in Preston Pans, near Edinburgh. Coming to Canada in 1848, he went into business early on his own account, and it eventually became one of the largest of its kind in Canada. He was a man of good parts and of excellent character, with a deal of unassuming force. Though never caring to be prominent in public life, he was a governor of the Montreal General and Western Hospitals, and long a member of the Board of Trade. His sons, Richard R. and Norman S., are engaged in the business which he founded.

We have to chronicle the death, on Saturday last, of Mr. G. R. Renfrew, head of the important Quebec fur house of G. R. Renfrew & Co., which originated long since under the style of Henderson & Renfrew; then became Renfrew & Marcoux, and has been carried on under its present style since about 1872. For the past six years there has been a branch of the business on King street, Toronto. Mr. Renfrew had passed his 67th year, and was a valued citizen of Quebec. He was a director of the Quebec Bank, also of the Quebec Fire Insurance Company and the Quebec Ferry Company, besides being interested in very many other enterprises in this city. Of his three sons, the eldest is in charge of the business at Toronto, the second is farming in Ontario, the third is in the business at Quebec.

A montreal dry goods retailer, named Jules Huot, who is a sufferer from departmental store competition, has made a voluntary assignment. He obtained an extension last February on liabilities of $11,000, but has been unable to carry out the payments.——David Kiely, of Montreal, boots and shoes, has been unable to make a success of business, and his store is closed up, while he himself is reported absent from the city. He failed before in 1893, when he arranged at 60 cents. —— N. Faulkner & Co., who opened in hats and men's furnishings only last spring in Montreal, have already assigned. Mr. Faulkner was originally a hat traveller, and was in business in Ottawa, but failed there. ——A demand of assignment has been made upon Beauchamp & Deslauriers, a firm of sash and door manufacturers in St. Henry suburbs, Montreal.

Fifty thousand, or a hundred thousand, bushels of grain taken at a time by boat from Lake Superior to Lake Erie no longer satisfies the American shipper. He must have half a million bushels carried at once. And he gets it done, too. Here we read in the marine column of the Amherstburg *Echo* that the steamer "Appomattox" and her three consorts, last week, on the way down from Duluth, carried the largest consignment of grain that ever left a lake port in a single tow. The "Appomattox" had on board 115,000 bushels of wheat, or 3,450 tons. The schooner "Crete" had 123,000 bushels of wheat, or 3,690 tons. The schooner "Armenia" had on 122,786 bushels of wheat, or 3,684 tons. The schooner "Algeria" had on 122,000 bushels of wheat, or 3,660 tons; aggregating in all for the tow 482,786 bushels of wheat, or 14,484 tons. Another big steamer, the "Sacramento," towing three schooners with classic names, carried somewhere near 480,000 bushels.

MONTREAL AND TORONTO

Mercantile Summary.

At a meeting of the Rossland Board of Trade held on Monday night last, J. B. McArthur was elected president, vice J. F. McLaughlin, resigned.

Several gentlemen connected with the Montreal Cotton Company were in Ottawa on Monday, with the object, it is said, of interviewing the Government about water privileges in view of a contemplated extension of the big mills at Valleyfield.

The inhabitants of Magog, Que., were almost panic-stricken on Tuesday last, when a fire started in the back of Charr and Freres grocery store—another report says the store of B. E. Goyette—and swept the business portion of the town. Dolloff's brick block and a dozen other buildings were destroyed. The Eastern Townships Bank premises are gone, and the Magog *Enterprise* office. Loss in all estimated at $40,000, on which there is $19,500 insurance. The town has a fire engine, but sent to Sherbrooke for aid, which was sent.

After the funeral services of the late I. E. Bowman, ex-M.P., whose death is referred to elsewhere, the directors of the Ontario Mutual Life Assurance Company held a meeting at Waterloo, at which Mr. Robt. Melvin, of Guelph, vice-president, was chosen president, Mr. Alfred Hoskin, Q.C., Toronto, made vice-president, and Mr. Wm. Hendry, manager, was elected to the vacancy on the board made by Mr. Bowman's death. Mr. Melvin has been a member of the board and on the Executive Committee since the company was formed, and has been vice-president for some ten years.

The Government of Canada has engaged Mr. William Jennings, C.E., of Toronto, to proceed to the Klondike with a party and report on the best means of getting into that country, whether by railway over an all-Canadian route or otherwise. Mr. Richardson, an expert in telegraph construction, started about the same time for Dyea with assistants to survey the best route for a telegraph line connecting the head of the Lynn canal with Lake Tagish, the first Mounted Police post. Mr. Jennings was to have left Vancouver Saturday last and gone northward. He purposed, we understand, to utilize the Pelly River, a principal tributary of the Yukon, for some 400 miles. He has secured 40 men and 100 horses for the expedition, which will take some months.

An Ottawa despatch tells us that the Government has come to an understanding with the Ottawa and Parry Sound and Canada Atlantic railway companies to form a western connection for the Intercolonial Railway through to Parry Sound on Lake Huron. The object is to capture grain trade from the Canadian west for the Government road and bring it down to St. John and Halifax at low rates, to compete with other ports of shipment. The line is almost straight, and lies nearly east Railway through to Parry Sound on Lake Champlain, and a jog of some 40 miles make the connection over the South Shore and United Counties Railways with the Drummond Counties road, and accordingly with the I.C.R.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summarv.

THE customs receipts at Halifax for the month of August amounted to $68,165. For the same period last year they were $199,139.

WE are informed that the London and Lancashire Life has appointed Mr. J. Alex. Culverwell local manager for the Toronto and Central Ontario district.

A ROSSLAND despatch of September 4th notes the taking up of an option on two lots on the corner of Washington street and Columbia avenue in that town by the Merchants' Bank of Halifax.

EIGHTEEN barrels of oysters, Caraquettes, we presume, were seized at Chatham, N.B., on Monday. The oysters were fished by parties in Burnt Church out of season, and they sold at auction for $1.85 to $2.15 per barrel.

A ST. JOHN paper states that Messrs. Rhodes & Curry, of Amherst, N.S., have the contract for preparing the stone for a large stone building, to be erected in a city in the United States, and the firm intends to have the work done in Moncton.

BANK clearings in the United States at 87 cities for the week ending Sept. 2nd, exhibit total clearances of $1,129,245,846, an increase of 36 per cent., as compared with the corresponding week of last year. Outside of New York city the clearances were $451,892,758; increase, 24 per cent.

BOARD OF TRADE returns show that for the eight months of 1897, ending with August, the imports into Great Britain and Ireland were £294,755,179, an increase of £11,438,513 over the same period of 1896. The exports for the eight months of 1897, ending August 31st, were £157,685,901, a decrease of £3,195,174 when compared with the same period last year.

A MILLION and twenty thousand dollars ($1,020,215) is the sum of the receipts of the Toronto Railway Company for the year ended with August. The earnings for September last year were $106,529, and for July this year were $106,750; other months ranging from $70,088 in February, to $94,120 in August. The city's percentage on the year amounts to $82,021; that is, eight per cent. on a million dollars, and ten per cent. on the receipts in excess of a million.

CHARTERS were made in St. John, on Monday last, of the ships "Marlborough" and "Larnica" to load deals at Saint John for W. C. England or E. C. Ireland, at 45s. and 47s. 6d. respectively. Other charters are the barques "L. W. Norton," New York to Bahia, general cargo, 65c. per bbl.; "Angara," do. to Pernambuco, case oil, 17c. and free lighterage; "Baldwin," Philadelphia, via Satilla, to Rio de Janeiro, machinery, p.t., and lumber, $13.

NEWS came yesterday that the stock speculating firms of J. R. Willard & Co., of New York and John C. Allen, of Buffalo, running the International Commission Agency there, had failed. Both of these houses had agencies in Toronto, and the former was represented in Montreal by Col. Frank Bond. There will be a slight interruption to the comfort of some who wish to speculate on margin. Willard is supposed to owe a million.

A VERY large quantity of rubber goods, part of the stock of the Canadian Rubber Company of Montreal, was auctioned off by Messrs. Suckling & Co. in this city, on Tuesday last. This is, we believe, the first time that these goods were ever sold here, merchants in previous years having to go to Montreal to make purchases. Retail merchants from all over Ontario were present, and out of 252 lots 203 were disposed of.

MR. EDGAR A. WILLS, secretary of the Toronto Board of Trade, has issued notices calling together the board appointed by the Dominion Government for the fixing of grain standards. The board will meet at Toronto, and on the 26th of September will fix the standards for grain east of Port Arthur.

IN August, 1894, the Toronto firm of Greene, McLaren & Co., wholesale boot and shoe dealers, dissolved partnership and the business has since been continued by R. H. Greene, under the style of R. H. Greene & Co. Recently Mr. G. disposed of his stock, amounting to $15,500, at a discount of 25 per cent. to his brother, W. W. Greene, and R. O. Wade, both of whom were formerly in his employ. On account of this purchase they paid $6,500 in cash. For the balance they have eighteen months in which to pay. Yesterday a meeting of Mr. Greene's creditors was held here and he offered 50 cents in the dollar, 30 cents cash and the remainder on short time. A majority of the creditors have accepted this. The direct liabilities are $64,721.

A MEETING of telegraph men was held in Vancouver, on September 8th and 9th to consider, among other things, the cable project to Australia. There were present:—George G. Ward, vice-president and general manager of the Commercial Cable Company; S. Dickinson, superintendent of the company at Canso, N.S.; R. V. Dey, representing J. W. Mackey, president of the Commercial Cable Company; L. W. Herron, superintendent Pacific Division Postal Telegraph Company; J. Wilson, superintendent Canadian Pacific Telegraph. Mr. Ward said a Pacific cable to Australia would undoubtedly be built at an early date. His company would work with the cable, and he would, on his trip, make an inspection of the landing places, etc.

FRED. G. MORRIS, a Halifax grocer, five years or thereabout in business, startled some of the people of that good city by making an assignment on September 2nd to J. C. Jones, and leaving the city with his family on the same night for Boston. He must have been what is now-a-days called a hustling business man, but he hustled so feverishly that he got tangled up in a bakery, besides his grocery, and in real estate, etc., on which he gave first and second mortgages, and some months ago appropriated $1,300 money belonging to St. George's Church, of which he was a warden. He gave notes for

British Columbia

Firms in Eastern Canada desirous of extending their business in the West should advertise in

the $1,300, secured by a mortgage, when he was found out and was supposed to be paying it off. He has preferred for $1,700 Rich. Pearce, who befriended him and advanced him money. He owes $7,000 or $8,000, possibly more.

MANITOBA farmers, or at least the earliest of them to market their grain, are getting very encouraging prices for wheat. A buyer at Gretna gave 81 cents per bushel on Tuesday of last week to a farmer for 3,200 bushels of No. 1 hard wheat, of this season's crop And on the following day 6,000 bushels was bought at Boissevain at the same figure. At and near Brandon a number of sales of wheat have been made. One extensive and shrewd farm owner sold about half of his crop for seventy-three cents. Later on he sold some more at seventy-six cents per bushel The price has risen to eighty cents per bushel, and it is said that contracts have been made for delivery at that price by some farmers.

AUGUST is not usually an active month in business, but in the United States it has been extraordinarily active. Dun's *Review* says that "with an extraordinary movement in grain, heavy real estate, and building transactions, and increased business in iron products, the month was clearly the busiest August ever known." The same journal adds that August was the first month in which the daily average of clearing-house settlements exceeded much that of the same month in 1892. It is curious to observe that failures in the United States in August were in number not 17 per cent. less than in August, 1896, but in amount of liabilities 70.8 per cent. smaller. July and August show a lower average of liabilities per failure than has ever been known in any year or even in any quarter of the 23 years R. G. Dun & Co. have kept quarterly records. The improvement is also well distributed, extending to nearly every important branch of business, but in clothing, jewellery, and unclassified trading, only two months of the past 47 have shown smaller failures, in general stores and furniture only three, in groceries, hats, and iron manufacture only four, in hat and chemical manufactures only five, and in clothing manufacture only six months of the 47. The ratio of defaulted liabilities to payments at clearing-houses has been smaller in July and August than in any other month since early in 1893." This indicates that merchants' stocks have been at a low ebb of late; they must need new goods.

THE EXPORT DUTY ON LOGS.

Suggestions have been made in the Canadian press that enactments should be passed compelling all Canadian logs to be made into lumber in Canada. And a deputation of Ontario lumbermen asked the Premier of Ontario to introduce measures with this end in view. It now appears that American lumbermen with Canadian interests have offered some considerations from another side of the question.

On Wednesday last a large deputation of Americans and Canadians waited upon the Provincial Governor-in-Council to oppose the passage of any legislation which would prohibit the exportation, for milling and manufacture, of logs cut on Canadian limits. The spokesman for this deputation was ex-Governor J. T. Rich, of Detroit, who argued that on limits not yet sold there should be no restriction as to where logs should be manufactured.

The deputation was presented to the Government by Mr. W. A. Charlton, M.L.A., and consisted, we understand, of Messrs. Hon. J. T. Rich, Detroit; Joseph Turner, and F. G. Winnett, Bay City, Mich.; C W. Lucy, Bay City, Mich.; F. Pitts, Detroit; D. Cutler and S. Doudge, Grand Haven, Mich.; F. E. Searle, Duluth; Albert Parks, Alpena, Mich.; C. E. Mould, Cheboygan; A. F. MacLaren, Stratford, Ont.; R. M. Ballantyne, Stratford; and W. L. Churchill, Alpena, Mich., and others.

IMPROVEMENT IN THE FAR WEST.

Besides the statements of good grain returns and higher prices which have come from Manitoba and the Territories, and perhaps in consequence of them, we begin to hear of new energy and activity in financial and commercial circles of the West. Cases are cited to us within a few days of persons from other provinces who had abandoned investments in Winnipeg and other Manitoba points several years ago, and are now taking them up afresh, paying back taxes, etc. We have already noted the fact that an unusual number of people had gone into our North-West this year as settlers. What has already been stated in this connection is confirmed, and more than confirmed, by recent advices.

As to harvest hands going into the province from Ontario, the Brandon *Sun* contended that the harvest excursions of this year were overdone, to the great hardship of many unable to obtain employment. This is a mistaken contention, in the opinion of the Manitoba *Free Press*, for the former journal "was rash enough to mistake a temporary local condition for a general and permanent one. Because a few dozen of these harvesters congregated at Brandon had not obtained employment the day they arrived, it jumped to the conclusion that the province has been flooded with them." We learned yesterday from a Winnipeg gentleman fully conversant with the circumstances that all those who reached Winnipeg in August have been absorbed, and farmers are still asking for more, and that the estimate made by the C.P.R. people, based on reports of their agents, proved to be very nearly accurate. Besides, a large proportion of those who went to Manitoba on harvest excursion trains were not laborers at all, but scores, perhaps hundreds, were men who took advantage of the cheap rates to see the country.

What has been stated in the local press of Manitoba as to the educative influence of the Winnipeg Industrial Fair, and especially the feature of it known as American Day, was not exaggerated, judging from facts since made known to us. Of the thousands of Dakota and Minnesota residents who on that occasion saw for the first time an exhibit of Manitoba's resources—33 crowded coaches came in on the Northern Pacific, and 13 on the Great Northern Railway, say 3,800 people in all—many had money and spent it freely. They bought not only goods, but cattle, while in the city, and since their return home sale after sale of farm land has been made to these Americans, many of whom will become residents of the province And what has happened this year in this regard may be expected to happen in succeeding years.

THE SITUATION.

One complaint, it might almost be called the one complaint, not seldom heard of the great Industrial Exhibition, which has been with us for two weeks, is that too much attention is given to various kinds of diversions. There is a sense in which this is true; but the answer is that it is an economic necessity, as it affords the only means of making the Exhibition a financial success. On the assumption that these diversions do not offend against the moral law, or diminish the exhibits in the industrial departments, the criticism really amounts to saying that the managers supply too plentiful a repast for the money. Tastes differ, and what pleases one is an unwelcome superfluity to another: the only thing is for each sight-seer to select the objects which please him and neglect those which he does not care for. This process of selection is the rule of nature and the prerogative of man. Nobody sets seriously to work to read the daily paper from end to end; each selects what interests him, and leaves the rest to men of other tastes, other views, other interests. So it is, or should be, with the Industrial Exhibition; so long as each visitor gets the value of his money, it would be churlish in him to object that somebody else fastens on what he disdains to look at. When this is thoroughly understood we shall probably hear fewer complaints that all do not want the same things, that the facilities of amusement are too numerous; and we may then find the means and the opportunity of selection better appreciated.

The rush to Klondike, chiefly of Americans, continues at a rate and under circumstances that may well create alarm. An American Government official on his way to these gold fields, when at Dyea, received information, on 22nd August, that there were then between tide water and Lake Bennet about 4,000 people and 2,000 horses, and that 3,200 more would attempt to go by the same route this autumn. The best opinion obtainable, that of old miners, was that not over 20 per cent. of this number will reach Dawson City before winter sets in. For the remaining 80 per cent. the prospect is dismal: overtaken by winter on the trail, they must seek a refuge by getting back to or near the coast, or perish by the way. The danger point may be expected to be reached by the 1st October. From July 23rd to August 22nd 1,000 men went over the Chillcoot Pass. How can the danger of the rush be lessened? Sixteen vessels have been chartered to take passengers to the Lynn Canal, and they, as usual, crowd on them twice the number that can legally be carried. The rigorous carrying out of the law, by the United States Treasury Department, would lessen the number of possible victims. At Klondike, provisions are already scarce, and many things are not obtainable except at great cost. The mass of mail matter is accumulating at the Pass at such a rate that it is difficult, and may be impossible, to deal with it. British subjects are allowed to pass goods over the Alaskan strip in bond; but horses, if used to pack, have to pay duty. Meanwhile, a number of the Canadian Mounted Police have started for Klondike *via* Edmonton.

Another discovery of gold, this time at Michipocoten, Ont., is announced. An official geologist has gone to investigate, and when he reports we shall get at least such information as a hasty, superficial view can give. Meanwhile, an ex-member of Sir William Logan's staff, of what quality we know not, has obtained specimens of gold-bearing rock which, on assay, give high results. Already there is something of a rush to the new El Dorado, American adventurers, as usual, being conspicuous among the adventurers. But amid the brilliant gleams of hope, one voice of warning is heard: it comes from a man whose father tried this field nealy forty years ago and failed. Such an experience is, however, not quite decisive; there are, elsewhere besides here, gold mines too poor, or too difficult, to be worked at a profit, in 1840, which, under better processes, yield satisfactory results now. Whether this is one of the cases, we shall learn in time. The trouble is that the impatient cannot wait for the facts, fearing that all the good things may, meanwhile, be taken up.

When Mr. Tarte asks whether the time has not come when "the transportation problem should be properly handled, in the interest of the Canadian people," he implies that this has not been done in the past. In some respects the opportunities afforded by our great waterway have not been made the most of. Those engaged in the business of transportation have too often looked to the Government to do everything, and have not always done what was obviously their own part. They failed to supply the necessary elevator power, at Kingston, to the great injury of the traffic by the St. Lawrence route. If our forwarders had shown anything like the enterprise which those of Buffalo exerted, the St. Lawrence route would have given a better account of itself. Whether Mr. Tarte can create a revolution in the traffic by means of the Canada Atlantic Railway from Coteau du Lac to Ottawa, in connection with the Ottawa and Arnprior and Parry Sound Railway, remains to be seen. He thinks he may soon see 15,000,000 bushels of grain taken to our ports by this route. One half of our Western grain now, he finds, goes by way of Buffalo, through the little Erie Canal. He is right in the belief that the carrying question is one of the most important that now confronts us. Its solution has formed a standing puzzle for half a century, and still the answer has not received practical application. The completion of the deepening of the canals will do something. But the question is a compound one, and it cannot be dealt with by separating the internal from the ocean traffic; both must be reckoned with together, if we are to make the best of our great opportunities.

LABOR DAY—LABOR'S OUTLOOK.

Labor day, as the September statutory holiday is called, every year acts as a reminder of the state of the relations between labor and capital. At Hamilton, Ontario's first manufacturing city, the labor problem was the subject on which prominent public men descanted. The Premier of Ontario; Mr. E. F. Clarke, M.P., and the Rev. Mr. Craig, of Oakville, were the notable speakers. They all showed in their addresses an anxiety to improve the condition of the laborer. Mr. Clarke said a good word for the labor organizations; while he cautioned workmen against making unreasonable demands. He pointed to the international character of the labor organizations on the two sides of the line; and he might have added, that it is unfortunate these affiliations do not prevent labor antagonism at the frontier, if, indeed, they have not had the contrary effect. Premier Hardy, who was there by invitation, pointed out that the condition of the laborer had been gradually improved on the whole; and he seemed to think that profit-sharing, now somewhat in vogue, contains possibilities of further improvement. Rev. Mr. Craig seems in one respect to be a disciple of the late Hon. Isaac Buchanan, whose iconoclastic motto in referring to the economists, was, "Burn the Books." A clergyman who denounces the economic doctrine that wages depend on the relation between the number of laborers and the amount of capital available for their employment, as "the doctrine of the devil," is a man out of his true sphere. To do him justice, he was equally hard on the preachers who refuse to mix ethics with economics. He does not admit that the condition of labor has been improved in 4,000 years, but as he is content to rest the statement on the authority of Debs, he cannot be accepted as an authority. Why is it that so many clergymen lose their balance when they touch on economic questions? For one thing, they have generally only a very superficial and imperfect acquaintance with the subject, their main studies having run in another channel. Diversity of view, if diversity is the result of serious study, is to be welcomed; it may mean, and probably does mean, an advance, but want of knowledge in the teacher, always dangerous, is never so dangerous as in dealing with grave social questions.

In the Hamilton Labor Day speeches we find nothing but condemnation of the repulsion of labor at the frontier line which divides Canada from the United States. That repulsion, born on the other side of the line, marked a total change of public sentiment and policy in the Republic, due to the growth of labor organizatians. Klondike and Rossland may modify this exclusiveness by showing that the medal has its reverse. The exclusion of Asiatics, especially Chinese, commends itself to Europeans in several other countries besides the United States. If Chinese immigrants were a fair average of their countrymen, the objections which lie against the class in which the High Binders are found, might not apply to the better sample. Russia, which set the example of requiring foreigners to take the oath of allegiance, as a condition of doing business in that country, long ago abandoned the restriction; so did Denmark; the United States approaches near to this modified exclusion at the Canadian frontier, wishing to force Canadians to renounce their allegiance as a condition of obtaining employment there. If the game is found to be a losing one, a change of policy will follow. The object of the labor organizations in desiring restrictions on immigration, is to maintain a relatively high standard of living, and in the main, the conditions favoring, it have been successful. In different countries, different standards of living are maintained, wages being higher in England than in Germany, and higher in the United States than in England. What is to be the ultimate outcome of international competition, the future must determine; at present, the dear races are in the ascendant, and there is no reason to conclude that they will not retain their position.

On what the future of labor will be, speculation is busy sometimes, as in the case of the author of "Looking Backward," if he can in any sense be taken seriously, running riot in pictures of impossible bliss. Henry George, with his proposal to confiscate rent, has had many followers who deem themselves honorable men. This fact is the intellectual anomaly of the latter end of the century, and it can scarcely be otherwise than a portend of evil. But a fact like this could not long remain isolated, and already there are forms of socialism in the air, which take a much wider sweep, and would gather in all forms of property by the same process. Even the old forms of socialism are being revamped, extended, and altered out of ken. "To every one according to his works," is a formula that was in vogue among French socialists, in the thirties. A year or two ago, an American woman lecturer, who had picked up this motto, added to it, "to every one according to his wants." Nationalism has its advocates, and believes in its future. Meanwhile America is under the rule of the combines, which present us with almost perfect models of socialism, with the socialistic element left out. If ever the industrial world should become socialistic, it is probable that one of the means of bringing about the change will be the utilization of this model. Meanwhile the great coal strikes remind us of the actual realities of the labor question, as it confronts us in practice to-day.

Trade unionism practically rejected the motto, "To every one according to his works," which, though set up by a socialist, was not necessarily socialistic, and in doing so, it made some sacrifice. It favored day labor in preference to piece work; in other words, uniform pay for unequal work. The result of such a plan was to strike a rough average; the superior workman must be a loser, since he could get no more than the inferior. A strike like that now going on in the coal regions of the United States is social war, in which some of the methods of actual war are used. While the laborers refuse to work on attainable terms, they do all they can to prevent others taking their places: while fighting for what they consider their own rights, they refuse to others, as far as they can, the right to earn their own bread on their own terms. This may be according to the laws of social war, but it is contrary to natural justice and the law of the land. In this strike public sympathy would naturally go with the men, but when the circumstances force the men to go wrong, they lose that sympathy. In a strike, as in other things, the odds are in favor of the major force; the overpowering battalions command victory. The labor problem remains unsolved.

THE STATE OF TRADE.

After a considerable period of doubt, and caution, and economy, the result of depressed conditions of trade not only here but in the United States, the Canadian business man is beginning to "see daylight"; he feels like holding up his head and throwing back his shoulders. In other words, confidence has returned; business of all kinds is likely to be done with greater freedom, and stocks to be replenished with more certainty. The gratifying crops of Manitoba and Ontario, taken in connection with the improved prices for wheat, reassure the country retailer, who feels that he can now buy goods with some safety since his outstanding accounts are likely to be paid.

What the grain dealers or the grocers call the statistical position shows satisfactory features. There has been all along for a year or two, as the bank clearings showed, a certain steady aggregate of business doing, but this month and last the movement has been accelerated. The telegraph returns, a good barometer of the state of activity in business, show an increase of nearly 12 per cent. in the receipts for July, and a similar improvement for August, as far as the returns are received. Nor is there wanting in the trade returns of the Dominion matter for congratulation. These show that the imports for the fiscal year ended with June amounted to $111,380,777, as against $110,587,713 last year, while the exports show an increase of from $118,140,504 to $134,113,970. Taking imports and exports together there is an increase over last year of nearly seventeen millions in the trade of the country. So that we may take courage and hope for a continued period of improved values and free exchanges.

Not that we should launch out into over-production in manufactures or into heavy speculative purposes on the strength of improved conditions. Nothing is more unwise; and such ventures have ruined ten men where they have made one man rich. This is a prevailing fault among United States manufacturers and merchants, who are apt to launch out at the first indications of prosperity into production on a vast scale, only to learn later that they had neutralized all the profit on their sale by making quantities of stock that had to be carried over.

Certainly, there is activity in trade now in the United States. Their good wheat harvest, their enormous crop of corn, added to the settlement of their tariff, and the movement of their foreign trade has given new life to almost every industry. Stocks of goods in many lines were bare and new products are needed. This is the case in textiles, probably also in boots and shoes, and it is a hopeful feature that values in both cotton and wool are firm. "Hand to mouth" stocks and timid output have long been the rule, even in the States; but now more courage is shown. The great iron and steel industries of the country, too, show greater buoyancy, and construction of buildings, bridges and factories, as well as of railroad work, has taken a fresh start.

All this must react favorably on Canada. In a variety of ways, not requiring mention here, the betterments of business in the larger country will make themselves felt amongst us, even in spite of Mr. Dingley's tariff. Our railway systems are interlaced with theirs in the East, in Ontario and in the far west; our canals and our system of water carriage must benefit also by more active business; and the impulses towards building or improving house property that always result from advancing commerce must surely, though not perhaps immediately, cause demand for our lumber in their midst. In fact, there is a certain amount of intercourse between the two countries which all the devices of Washington protective politicians cannot extinguish. The restoration of confidence and an improvement in business in one country assists commercial improvement in the other. And there are now in view in both the elements of stable and profitable business to a degree which has not existed for several years past.

THE MANITOBA CROP.

There is cause for thankfulness in the prospect, now almost a certainty, that Manitoba has been blest with a wheat crop which will exceed the estimate made by her Government. And the increased prices realized and to be realized for it are a further element in the national thankfulness. Since last we wrote on this subject the Bulletin of the Manitoba Department, dated 20th August, has come to hand, and a summary of it may prove interesting. We present below the totals of tables showing the area under crop, the yield per acre, and the total estimated yield in bushels:—

	Area under crop.	Yield per acre.	Total yield.
Wheat	1,290,882 acres.	16.49 bush.	21,284,274 bush.
Oats	468,141 "	26 73 "	12,517,212 "
Barley	153,266 "	23 80 "	3,644,768 "
Flax	20,653 "	15.00 "	309,795 "
Rye	2,975 "	18 50 "	55 037 "
Peas	1,669 "	23.00 "	38,387 "
Total grain,	1,937,586 acres.		37,849,373 bush.

Hay, the returns for which in the different districts we cannot well tabulate, shows a yield of approximately 2 tons per acre in the Northwestern district and 1½, 1.7 and 1.4 tons in the other districts; average over the whole, say, 1.4 tons. Cultivated grasses have yielded a like average, the returns ranging from 1.1 tons in the North Central to 1.4 and 1.6 in other districts. The dry weather experienced has lessened the yield of both prairie hay and cultivated grass, which was last year about three-tenths of a ton greater. It is of moment to observe that the yield of the native grasses is heavier than that of the cultivated varieties.

The grazing lands of the province are upon the whole in fair average condition for the season of the year. The statement of land being broken up and land being fallowed shows a total of 88,790 acres breaking and 392,960 acres fallowing, about half these areas respectively being in the South Western district.

Recurring to the wheat harvest, later advices supplied by the Manitoba and Northwestern and Northern Pacific Railways to the Winnipeg *Free Press* of Sept. 4th, show that ninety per cent. of the wheat in Manitoba is cut and no damage to speak of from frost, though some in one district from hail. The threshing returns from some thirty different points in the Province show an average yield greater than the Government estimate. From three points named, the yield of wheat is put at 15 bushels to the acre; from four, 18 bushels; from four, 20 bushels; from one, 24; from one, 25; from one, 30 to 40. Others place it at 15 to 20, 16 to 18, 20 to 22. Barley ranges from 20 to 36 bushels per acre, and oats from 25 all the way to 50, the average being from 30 to 40 bushels. Around Westbourne, for instance, the wheat yield is placed at 20 to 22 bushels, and oats at 35 to 40; while around Strathclair they have gathered 18 bushels wheat, and 40 to 50 of oats. At Portage la Prairie, according to a telegram of 1st September, the yield varies from 15 bushels to 30 per acre of good wheat, and the threshing proves lighter this year all round.

ONTARIO LUMBER.

In answer to a Belleville merchant who writes making some enquiries and suggestions as to the "advantageous situation" of Ontario manufacturers of sawn lumber and their duty in certain circumstances, we have to say that he appears to confound the Georgian Bay mill men with the Ottawa lumber makers, whereas there is a material difference in the sphere of possible profitable operation by these respective manufacturers in selling their product.

The Ottawa maker of sawn lumber can send his product into New York State, we are told, all rail, at say $2.50 per thousand feet, whereas it will cost the Georgian Bay maker $4 per thousand, all rail, to deliver at the same point. If a route part rail and part water be chosen, it will cost the Ottawa mill proprietor $2, while the cost to the Georgian Bay sawyer will be $3.50 per thousand.

This by reason of the difference in the geographical situation of their respective mills.

It is the finer qualities of American pine lumber that come into competition in New York State with the better sorts of Canadian pine lumber. On the other hand, the Michigan lumber operator can send, and does send, his coarse pine lumber across Lake Huron, and sells it to Canadian dealers and builders at points from Sarnia to Goderich and Southampton.

RONDOT VERSUS MONETARY TIMES.

In July, 1895, this journal made certain statements with relation to the failure of Mr. A. E. Rondot, a dry goods dealer of Amherstburg, and drew certain inferences from them which did not please Mr. Rondot. As a result we had an action for damages on our hands, which has been pending ever since. We had not stated anything that we did not believe to be true, and therefore could not apologize.

After many delays the case came on for trial at Sandwich this week before the Honorable Mr. Justice Falconbridge and a jury composed of residents of the county of Essex. Mr. Dalton McCarthy, Q.C., appeared for the plaintiff, and Mr. Gibbons, Q.C., of London, and Mr. John King, Q.C., of Toronto, for THE MONETARY TIMES. The defence put Mr. Rondot in the box to prove their case, and he was examined by Mr. Gibbons for several hours. The result was a verdict by ten of the jury in favor of the defendants, and two in favor of the plaintiff, and the action was accordingly dismissed with costs.

This journal never had any feeling as far as concerned Mr. Rondot. We desired to do him no injustice. A jury of his own county, upon his own evidence, have justified us in the course which we have taken in this matter. He has succeeded in putting THE MONETARY TIMES to considerable expense, but we have the proud satisfaction of knowing that its course from the first was prompted by public interest, and it has been justified to the fullest extent by a jury of Mr. Rondot's neighbors.

IMPROVED COUNTRY ROADS.

Among the features of this country which attracted attention and caused remark from the visitors on the occasion of the recent British Association meeting was the nature and condition of the country roads. The visitors were surprised, considering the character of some of our streets in the cities, that we had not better roads in the country, as a rule. This surprise is not to be wondered at, when we recall the excellence of the Old Country roads generally. They are so good, and the value of them is so great, that those who are in the habit of using them cannot understand how an intelligent community such as the people of Ontario are, can put up with roads which, at certain seasons of the year, are all but impassable.

Nor is it much better, if at all, in the United States. Complaints, loud and long, have been made by our neighbors to the south of the condition of their country roads. And the badness of them has been more fully recognized quite recently, in fact since the popularity of bicycle riding in the country has drawn the attention of city people to the rural highways.

In both countries, however, an agitation has been gaining strength for the past year or two, having for its object the improvement of the roads. In the States, the Good Roads Association has brought powerful influences to bear, with this aim in view. And in Canada, although we know of no similar organization to the one just mentioned, the Governments of more than one of the provinces are moving in the direction of improving the roads.

A Blue Book on the road problem, issued by the Government of Ontario during the present year, contains the following language on the subject: "This lack [of improved roads] is seriously felt by all classes of society. . . . Were economic methods instituted millions of dollars would be added to agricultural values, and the mercantile and banking interests would be placed on a more stable basis." The man chosen last year for the position of instructor in road-making, Mr. A. W. Campbell, appears to have performed his duties in a manner that stamp him as the right man for the place. His report for 1896, of 80 pages, shows that he had already in eight months of that year visited and conferred with the authorities of 21 towns and 27 townships. He reports the interest taken in the subject to be most gratifying, and he mentions a number of instances in which roads have actually been constructed on improved methods within the period described, with beneficial effect, as the result of distribution of literature on the subject.

Drainage of roads, crowning them, judiciously locating them, the width of the roadbed, the width of graded portion, treatment of hills, repairs and machinery, are among the principal subjects the instructor has dwelt upon. Considering the average township requirements, he has enlarged mainly upon the advantage of gravel and broken stone roads, because materials for these are distributed generally throughout the Province. "The question of tires," he says, "is a very important one and calls for special emphasis." Evidently he means that our present wagon tires are too narrow, for he adds, "were tires of a suitable width used in all cases, a very great part of the road question would be solved."

It is not proposed, in this article, to go into detail as to the most desirable methods of making our country roads better. What seems to us of superior moment in the meantime is to arouse the community, the farmers especially, to see that hitherto their labor on the roads has been largely wasted, and that large appropriations for roads from the general municipal tax funds have been wasted, because proper principles of roadmaking were not adopted in the first place. They should be made to see that roads which are from six to sixteen inches deep of mud at certain times in the year, roads which are so full of ruts that a man cannot drive at a trot for a quarter mile, roads that are so hilly that a driver of a vehicle has often to alight going up one, should be entirely rebuilt, and that the ineffectual pottering of statute labor should give place to a settled and improved system based on experience, economy and common sense.

Let the farmers, Jones and Smith and Macdonald, once understand that of the millions lost every year by Canada through bad roads, Jones loses $20, Smith $40, and Macdonald $100 every twelve months, and there will be a movement in the direction of better roads that will transform our rural municipalities.

ONCE BITTEN, TWICE SHY.

A startling illustration of the harm which may be caused to the community by the collapse of an assessment life company came under our notice last week. A woman, whose brother, a man of middle age, had been for years insured in the Massachusetts Mutual Benefit Life, was talking to another woman of the distress of mind the recent failure of this company had caused him.

"But," said the other, "Mr. L. is a young man yet, only a little over 40, and that's not too old to get insured again."

"That is what we told him," returned the sister, "and Mr. ——, the banker, told him the same thing, and tried to cheer him up. But he is soured on life insurance—says he won't have anything to do with any company, or society or association again, because the pledges given him, when he first applied to it, by prominent people, such as clergymen and lawyers, that the Boston company was all right, turned out false and the company's weakness disgraceful, and he feels swindled. And now he says, 'If I ask about another company to go into, they'll tell me *it* is all right. But how am I to know? I won't have anything to do with any of them.' And he won't, either."

"But he is surely wrong, Miss L., to let a prejudice run away with him like that."

"I don't know whether it is prejudice or what it is, but it makes him very angry and the rest of us very unhappy."

How many more bread-winners may be driven to think as this man does, we do not know. We may say he is foolish, or embittered, but what of those who are not foolish in this sense, men who believe in life assurance and want to be insured, but who have leaned upon the broken reed of assessmentism so long that when it is gone they are too old to get insured elsewhere? Two days after the occurrence described above, we found in an American journal the statement that while the failure of the Massachusetts Benefit caused numbers of people in the Eastern States to apply to the regular companies for insurance, there were some of its former certificate-holders who were "afraid of being twice bitten," as they phrased it, and refused all applications by agents to make application for a policy. In both New Jersey and Pennsylvania this was found to be the case. Such agents, says the *United States Review*, "will doubtless meet many cases where the victims of the defunct association will not now consider any kind of insurance, and thus they have forcibly brought to their attention the great injury to the business in general which results from the failure of a life insurance company."

TEXTILES IN THE UNITED STATES.

After several years of great disturbance and irregularity in the textile manufactures of the United States, the cotton and woolen mills of that country are now again getting into something like their former regular rate of production. It is possible that while the output of American cotton mills was much affected by the depression of 1894 and 1895, the woolen output has, for the last year or two at least, been adversely affected by the uncertainty with respect to the tariff on wool. But both industries are, at present, steadily improving. The woolen factories are cautiously extending their output and getting rid of accumulated stocks, while the cotton men are doing rather more than an average trade for this season. A nine million bale crop is promised it seems, but prices keep up fairly well for all that.

The average yearly consumption of wool in the United States is estimated at almost 500 millions of pounds, while the consumption of raw cotton is placed at 1,200 millions of pounds. At least, this is the calculation made by a statistical authority after tabulating the imports and domestic production for ten years ended with 1897.

The domestic production of wool in the United States, as estimated by the National Association, amounted in round numbers to 300,000,000 pounds in the first five years of the decade 1888 to 1897. Then it increased to 333 million pounds in 1893, to 348 millions in 1894, since which it has declined to 325 millions, 294 millions and 272 millions in the last three years respectively.

Wool imports into the United States, on the other hand, show a much more marked increase. According to the circular of Justice, Bateman & Co., in 1888 they did not much exceed 113 million pounds; in 1892 they had reached 148 millions and in the following year 172 millions. But in the fiscal year 1894, owing to exceptional dulness, they were only 55 million pounds; 1895 witnessed a bound of imports to 206 millions; 1896 and the present year to 231 and 351 millions respectively.

In no one year under free wool, except 1897, did the foreign supplies of wool equal the domestic production, but the present year is exceptional in that an unusual stock has been laid in, almost enough, one would think, for two years' supply. The effect upon domestic fleeces of freeing wool from duty is shown by the fact that in 1896 and 1897 the clothing wools (Class I.) imported exceeded the imports of carpet wools or other wools. The figures supplied indicate a strong statistical position for wool. As to the supply recent advices from Europe state that the scarcity of wools of the first class, owing to droughts in Australia and the Argentines, is now being felt. Consumers already apprehend that in place of the customary increase in the supply there will be a decrease. Helmuth, Schwartze & Co.'s London wool circular of July shows that the product from the Southern Hemisphere for 1896 (which was before the drought had fully set in) was only 3½ per cent. above the average of the past six years. The wool product of Australia (which above all others is the one of most interest to the United States) in 1896 was only one-third of one per cent. greater than the average for the last six years. The London auctions, which are to open on the 28th of September, up to this time have catalogued only 170,000 bales, as against 314,000 bales at the corresponding series of last year.

In this connection it is of interest to quote from an Australian letter dated July 8th last, received by the Philadelphia firm from whom we have quoted. It says: "The writer has spent a short time in the Riverina (Australia) lately—the district where the bold, strong merino wools are mostly grown, that are so much liked on your side, and has seen for himself the deplorable condition into which the country has fallen for want of rain. For some 250 miles not a blade of grass was to be seen, the ground baked hard and dry. In consequence thousands of sheep and cattle died, and the fleece of what live must be in a very bad state, regarding both strength and yield."

THE INDUSTRIAL FAIR.

A change has been made in Machinery Hall, and it is a change for the better. The building is lengthened, or at least there is more room in it; for the serio-comic arrangement of tin and paint and roiled water that served as a "fountain," and really did, for natural reasons, produce a water-fall, has gone. May it never come back, for it was a childish device, whose splash perhaps tickled the ears of the groundlings, but served neither a practical nor an ornamental purpose. Its removal leaves room for something better in the shape of electric machinery and Northey's pumps. We get an idea of late years what a variety of pumps are made and what varied purposes they serve.

The Toronto Electric Motor Co. show, in Machinery Hall, a Multipolar Generator, connected direct to an Ideal steam engine of 50 horse-power. This plant is intended for the Methodist Book Room on an installation of 600 lights. It has a handsome marble switchboard mounted in oak. From this remarkable and novel machine may be developed, we are informed, either power, incandescent light or arc light. Close beside it stood a little modest machine that one might put in a valise. This, we are told, is a single-phase alternating current motor, designed to run an ordinary incandescent electric circuit, the current of which it will change into power for mechanical purposes. This machine may also be used for changing the alternating current into direct current, and when used for this purpose is termed a rotary transformer. When driven by mechanical power, this mysterious little bundle of wires will generate currents of electricity, either alternating or direct, or both may be obtained from it simultaneously. It is patented by F. H. Leonard, of Boston, and made by the Toronto Electric Motor Company, which has supplied electric motors to scores of Ontarto firms.

One of the largest spaces in the stove building is occupied by the J. F. Pease Furnace Company of Toronto and Syracuse. For years the Economy Heater, made by this company, has been before the public, and has justified its name. The different parts and the method of construction are here shown in the amplest way. They are constructed to burn wood as well as coal, and to produce hot water or a combination of steam and warm air, and have given great satisfaction.

Messrs. Clare Brothers & Co., of Preston, have shown some tact in the application of names to their hollow-ware. For example, a plain, substantial cooking stove of their make is named "The Patron," for, presumably, the Patrons are as a class substantial people of plain tastes, and the "Householder" is a square, British-looking, steady-going cooker; another cooker, which has projections and a few frills, is called "The Peninsular," while a parlor base-burner, decorated with nickel and inlaid with tiles, is named "The Regal Peninsular." Other goods of this firm are ranges and heaters of various kinds; among them the Granite Range, the Columbia Diamond, the Favorite, and the Souris, which last, we should think, is designed for the Manitoba trade. It is true that heating, owing to the severity of the climate, demands no small amount of attention and consideration from every Canadian, and any new system introduced which simplifies and economizes the heating problem is of importance. Hence the interest shown in the Preston boiler, made by this firm, which is a simple and economical heater, remarkable for the extent of its fire surface, and for the ease with which it can be cleaned. They have also on show steel radiators of unusual power made of thin metal, with a great surface exposed.

People have learned to look for the exhibit of the Waterous Engine Works Company at the Toronto Fair, because they always find there something of practical utility in the engineering way. This year they show a specimen new farm engine for threshing purposes. It was intended to build a dozen after this pattern, which is economical and easy-running, but the demand has been so unexpectedly great that the company has already built 35 of them. Goods which attract more general attention (and no wonder) are two fire ladder trucks made by the Waterous Company and shown here; the smaller of these belongs to the municipality of Harriston, Ont., and the larger to the city of St. Thomas.

MARITIME PROVINCE EXHIBITIONS.

September will witness all but one of the larger fall exhibitions of the Maritime Provinces. St. John has for years put forth great efforts annually to make a worthy display at her International Exhibition. This year, as we have already stated, the event will begin on September 14th and continue till the 24th. The Nova Scotia Provincial Exhibition takes place later, opening on September 28th and continuing until October 1st. Special rates have, we understand, been secured for it and for the St. John one, by rail and boat. Prince Edward Island offers four exhibitions at different dates, the points being Charlottetown, Summerside, Georgetown and Alberton. On the 21st to 24th September the Provincial Exhibition takes place at Charlottetown. The King's County Exhibition will be held at Georgetown on the 29th inst. The Alberton Exhibition, for Lots 1 to 11 inclusive, takes place on the 30th inst. The Prince County Exhibition is to be held at Summerside on October 6th.

FALL EXHIBITIONS.

This is exhibition month. At least September is the month during which the great majority of exhibitions and fall fairs are held. In addition to some which we have mentioned already, we now give the dates and places of a number of Canadian exhibitions now current or yet to be held:—

Western Exhibition	London	Sept. 9 to 18.
South Lanark	Perth	" 8 " 10.
Central Fair	Guelph	" 15 " 16.
Bay of Quinte	Belleville	" 14 " 16.
North Grey	Owen Sound	" 14 " 16.
Central Canada	Ottawa	" 17 " 25.
Central	Peterboro	" 21 " 23.
Great North Eastern	Collingwood	" 21 " 23.
Great North Western	Goderich	" 21 " 23.

A conservative estimate places the loss in Brookdale, Manitoba, by hail to be 100,000 bushels, says the Carberry *Express*. At the present price of wheat this will mean a loss of $80,000 to the Brookdale farmers.

DEATH OF MR. BOWMAN.

An active life came to a close and a useful man was removed from commercial and financial circles of Ontario by the death, on Friday morning last, at the age of 65 years, of Isaac E. Bowman, president of the Ontario Mutual Life Assurance Company. The deceased gentleman was a Canadian, born in the county of Waterloo, and commenced life as a public school teacher. In 1864, he was elected to represent North Waterloo in the Legislative Assembly of Canada, and afterwards represented that riding in the House of Commons until 1878. In 1887 he was again elected and continued a member until 1896, when he retired. Mr. Bowman was a director of the Waterloo Mutual Fire Insurance Company from its establishment in 1863 up to the time of his death, and was for more than twenty years president of the Mercantile Fire Insurance Company, now amalgamated with the London and Lancashire. He has, besides, claims to be remembered gratefully by the Ontario Mutual Life Assurance Company, being one of the provisional directors at the inception of the company, and holding the position of president from its organization in 1869 until his death. Mr. Bowman was one of those plain, sensible, unassuming men who command confidence by their consistent good sense and integrity. He possessed natural shrewdness and a kindly disposition, and will be much missed in Waterloo.

DRY GOODS IN MONTREAL.

The millinery openings being held this week in Montreal have been quite thickly thronged with visitors from all parts of Quebec province, the Ottawa Valley and Eastern Ontario, but very few buyers have come from points west of Kingston. Large purchases are not frequent, the wholesale houses say, but the aggregate of millinery business done is reported to be very satisfactory. The number of regular dry goods buyers among the incomers to the city is not large, but the warehouses in this line show a very fair and encouraging degree of bustle. Retail merchants, it is found, are looking forward confidently to better autumn collection of outstandings which the good crops on the farms make probable. Hence these country shopkeepers are buoyant in hope of meeting their own engagements. Commercial travellers, who have been mostly at home in warehouse or following the larger fairs, will again be out on the road pretty well by the beginning of the coming week on the sorting trip. The weather has been almost too warm for Montreal dry goods retail trade to be active.

MINING INFORMATION.

A group of gentlemen in and about Danville, Que., are proprietors in the Laurier Mining and Milling Company, of Ainsworth, B.C. Their mine has over five hundred tons of mineral on the dumps, and the tunnel is in over two hundred feet. Its principal output is silver and lead.

Prof. John Macoun, of the Geological Survey, has returned from his summer's work on the prairies of the North-West Territories. He states that in mid-August Mr. Stafford, of the Galt Coal Company, discovered a nine-foot seam of excellent quality coal in Alberta, six miles east of the mountain.

According to a Rossland despatch of 1st September an arrangement is closed by which a London company, the New Goldfields Company of British Columbia, purchased the Velvet mineral claim on Sophia mountain, five miles southwest of Rossland, for $62,500, of which $12,500 was paid in cash, the balance being paid in full paid-up stock of the London company. Sir Charles Tupper is connected with this company. David B. Bogle also cabled on that day, it is said, from London, $7,000 as second payment of the Victory Triumph group, the adjoining property to the Velvet, which has been under bond to his English company, the Kootenay Goldfields' syndicate, for the past six months.

The "side trips" or through trips arranged by the local committee of the Toronto meeting of the British Association, are likely to be productive of much interest to the visitors, and to be of value to Canada, by showing them the variety of our resources. Last week, the third party of transcontinental travellers reached Rat Portage, Ont., from Toronto, escorted by Dr. G. M. Dawson, director of the Canadian Geological Survey. They took a trip on the Lake of the Woods for the purpose of visiting some of the mines in the district. Some distinguished men are among them, such as Surg.-Major Sir George Scott Robertson, K.C.S.I., British agent in Gilgit, India; J. Scott Keltie, LL.D., secretary of the Royal Geographical Society, and correspondent of the London *Times*; Prof. C. Le Neve Foster, Prince Kropotkin, Dr. and Mrs. Mill, Prof. T. Hudson Beare, Prof. Magnus, Prof. Coleman, Col. F. and Mrs. Bailey, Prof. Ponck, Mr. Lamplough, E. G. Ravenstein, the geographer; Dr. H. O. Forbes, Mr. W. E. Hoyle, H. E. Armstrong, A. Harden.

Having seen a statement telegraphed from Vancouver last week respecting the result of the operations of the Cariboo Hydraulic Mining Company, we made enquiry in Toronto of some shareholders, and find it substantially true. The statement was of the result of the clean-up, which was completed on the 26th August. The amalgam amounts to 5,685 ounces, of the estimated value of $60,500. This is the proceeds of forty-seven days washing with two giants. Mr. Hammond corrects this by saying that the exact amount was $61,900, some few ounces more having been found later. The dryness of the season has lessened the supply of water, and this clean-up is not as big as would otherwise have been the case. It is very likely that before next season the company will have completed works which will add greatly to the output. Hydraulic operations were resumed as soon as the clean-up was made, but it is expected that the lack of water will permit of work being carried on only for a limited number of hours per day. Under existing circumstances, it is thought that the total clean-up for the season will amount to more than $150,000.

Late in August word was brought to Sault Ste. Marie of the existence of a very rich gold mine on the shores of Lake Wawa, five miles north of Michipicoten, Ont., on the north shore of Lake Superior, and say 150 miles from the Sault. The discovery was made in July last by an Indian, who divulged it to two friends at North Bay, Messrs. Dickinson and Mackie, who made a personal investigation. They afterwards applied for and secured seven 40-acre locations, and it is this tract that they are said to be negotiating for with Montreal parties, a large sum being named as the consideration. Samples taken at random show free-milling gold quartz, assaying $100 to the ton, as the report goes. Last week's news, announcing the return to the Sault of a tug from the scene, confirms the glowing accounts given of the richness of the find at Michipicoten. The tug "Annie Clarke" returned from the new gold fields on September 1st, with Mackie, one of the owners of the first location, who brought down with him 30 ounces of gold, extracted from surface quartz. A party of fourteen prospectors left for Michipicoten last Friday, hoping to find more such locations. The report has excited the community.

Mr. Shaughnessy, vice-president of the Canadian Pacific Railway, has been talking to the Rossland mining people in a way that they like. Discussing freight rates on ore the other day, at a meeting, Mr. S. said that, when he was in Rossland two years ago, Le Roi and War Eagle were the only two mines much spoken of. He had talked with a representative of the Kansas City Smelting Company at the time about building a smelter on the Columbia River. They first thought of Arrowhead as the right place, and then Nakusp; finally, Robson was chosen, but the Rossland ores were so little understood that it was finally decided it would not be safe to build the smelter at that time. Later on Mr. Heinze came into the field and built a smelter and railroad, and had invested a large sum of money. Mr. Heinze had come to him in Montreal last winter and asked if the C.P.R. would object if he built a road up to Robson. He said the C.P.R. would not object, but that Rossland was in the C.P.R. territory and that the company would not allow anything to stand in the way of its making such rates to Rossland in the future as it might think best. "The C.P.R. is a powerful company," Mr. Shaughnessy continued, "and we do not want to come in and crush Mr. Heinze. At the same time, I will say to you we are going to see that Rossland ores are smelted in British Columbia. I hoped to meet Mr. Heinze here and have an understanding with him. I cannot now make any definite announcement, but my mind is made up as to some things, and when I get back home and see our directors, I think we shall be able to say something, and that something will be satisfactory to Rossland." Speaking of fuel supply, Mr. S. thought Robson would be the smelting point for the Rossland camp, and he thought he could promise that the Crow's Nest line would be completed to Robson by September 1st, 1899, and that coke could be laid down at Robson at $5 or $5.50 per ton. The last statement was received with much enthusiasm and no wonder.

NATIONAL ASSOCIATION OF LIFE UNDERWRITERS.

We are always interested in the gatherings and deliberations of the National Association of Life Underwriters of the United States: not only because the gatherings are fraternal and jolly and inspiriting, but because the speaking is sure to be good, and there is always something sensible and weighty, as well as witty, said. Hence we wish well to the eighth annual meeting, which is to be held in Milwaukee on the 15th, 16th and 17th days of this month. The executive committee will meet on Tuesday, the 14th, the day preceding the convention. The headquarters of the association and all committees will be at the Hotel Pfister. So far as we are informed, the procedure will be as under: The convention will be called to order at 10 o'clock, Wednesday, and will close on the evening of Friday with a banquet at the Hotel Pfister, tendered by the Wisconsin Association. During the session of the convention papers will be read by C. M. Ransom, of Boston; J. A. De Boer, secretary and actuary of the National Life; Simon Wolf, of Washington; C. A. Loveland, actuary of the Northwestern Mutual, and C. W. Pickell, of Detroit.

FIRE UNDERWRITERS' ASSOCIATION OF THE NORTH-WEST.

One of the features of the annual meeting of this body is to be, we observe, a practical illustration of acetylene. This will doubtless bring about a discussion as to the combustible nature of this gas, a subject which has already presented itself to the minds of Canadian fire underwriters. The meeting this year is to be held in Chicago, Wednesday and Thursday, September 29th and 30th. The programme as arranged is as follows: First day, opening session, 9.30 a.m.; annual report of officers, committees, etc.; president's annual address; C. E. Irvin, president Fire Association of Philadelphia, Pa; paper, "The Future of Fire Insurance Business from a Local Agent's Standpoint," J. A. Garver, jr., Des Moines, Ia.; discussion.

Afternoon session, 2.30 o'clock: Paper, "The Force of Circumstance," John E. Davies, Racine, Wis.; discussion; paper, "Insurance from a Business Man's Standpoint," Harlow N. Higinbotham, of Chicago, Ill.; discussion; paper, "Loyalty and Co-operation," Frank H. Whitney, Detroit, Mich.; discussion; paper, "The Best Fireproof Construction for Buildings Occupied for Mercantile Purposes," W. L. B. Jenney, architect, Chicago, Ill,; discussion; paper, "Hostility of the Public toward Fire Insurance Companies—What We Have Done to Cause It and What We Can Do to Remove It," Walter H. Cobban, Minneapolis, Minn., State agent Manchester Fire Assurance Company; discussion.

Second day, morning session, 9.30 o'clock: Paper, "Special Agents Versus Local Board Inspection," James F. Joseph, Cincinnati, Ohio; discussion; paper, "Discriminating and Unjust Legislation," H. R. Hayden, editor *Weekly Underwriter*, New York; discussion; paper, "Underwriters' Associations Generally," C. F. Mullins, San Francisco, Cal., manager Commercial Union; discussion; paper, "The Local Agent," H. R. Loudon, St. Louis, Mo., State agent Liverpool and London and Globe; discussion; paper, "The Satellites in the Insurance Business," R. S. Odell, Chicago, Ill., special agent Connecticut Fire Insurance Company of Hartford; discussion.

INSURANCE MATTERS.

Lawrencetown, Annapolis county, Nova Scotia, is to have a system of waterworks. The contract for the placing of the system has been awarded to a Windsor man.

Incendiarism is suspected in the case of the burning on Tuesday last of the shingle, saw and grist mills of James Woodruff, Sydenham along with the contents, sheds and lumber. The villagers confined the flames to the mills. Soon after the residence of T. P. Holland was found in flames. Oil had been thrown over its side and end, and set ablaze.

A factory hand in Germany, in going from one story of the mill to the other in a freight elevator, recently met with an accident, but was refused indemnity by the accident company with which he was insured. On an appeal to the Imperial Office a decision was given in favor of the company, on the ground that "the insured, by the habitual nature of his employment, was required to move only in a horizontal and not in a vertical direction."

A fire which is supposed to have started from a kerosene lamp destroyed the White Mill, at Providence, R.I., last month. The sprinklers, which were of the new Walworth type, opened in the various rooms, but for some unknown reason failed to check the fire. The tank had recently been elevated twelve feet above the highest sprinkler and had also been enlarged to a capacity of 8,500 gallons, which gave at least fully twenty pounds pressure.

Fires in prairie grass often do great damage in the autumn in the territories of the West. That the railway service may not be instrumental in igniting the grass the C.P.R. authorities have issued instructions to engineers and employees that no locomotives are to leave the roundhouses till a proper inspection has been made to see that the netting of the smokestacks are complete, and also that in emptying the ashpit care be taken to see that no live coals are dropped on the track. If, says the Winnipeg *Free Press*, hunters would observe similar vigilance the danger of fire would be much less, as investigation in the past has demonstrated that much of the damage has been occasioned by sparks from a camp fire being blown into the adjoining grass.

On Wednesday last the court at Toronto made permanent the recent appointment of Thomas E. P. Sutton as liquidator in the winding up of the Canadian assets and affairs of the Massachusetts Benefit

Life Assurance Company. The assets, including the company's deposit of $100,000 with the Government at Ottawa, amount to about $140,000. It is expected that the American creditors of the defunct concern will seek to have the Canadian assets satisfy their claims irrespective of the claims of Canadian creditors. Other questions are disturbing the peace of the Canadian policyholders, one of which relates to the period they may be allowed to recover assessments paid and whether such claims will have priority over death claims.

WHOLESALE AND RETAIL DRUGGISTS.

The Queen's Hotel, Toronto, was the scene of animated discussion by druggists on Tuesday, September 8th. The meetings of the three distinct organizations, proprietary articles being the third, are held simultaneously, so that inter-trade questions may be discussed. The matters under discussion affect transportation and profit arrangements, and all but one are described as of no public interest. The exception is the question of the sale of proprietary medicines at departmental stores. The retailers want the manufacturers to refuse to sell to the big stores, and the wholesalers support the retailers.

Those present at the wholesalers' meeting were: C. McD. Hay, of Lyman, Son & Co., president; W. S. Elliot, secretary; D. Watson, of Kerry, Watson & Co.; H. H. Knox, of Lyman, Knox & Co.; H. H. Lyman, of Lyman, Sons & Co.; James Metterison, of the London Drug Company; James Kennedy, of London, and R. W. Elliot, of Elliot & Co.

FOR GROCERS AND PROVISION DEALERS

A well-known Southern California firm proposes to introduce the California black olives into Eastern markets.

The fruit crop is not up to the average in the Eastern Townships of Quebec. The supply of apples is far below the average, as might be expected after the immense yield of last year. Of the standard winter varieties, the Northern Spy has done best. Plums suffered a good deal from rot.

Since Armour & Co. have been forced out of the manufacture of olemargarine by the recently enacted oleo law of Illinois, they now turn their attention to the manufacture of butter. The firm started in the butter business several days ago, and have already sent out quotations, which are about ½ cent per pound higher than the market.

It is satisfactory to learn that a German merchant, Herr L. J. Lowentheal, of Hamburg, writes to Superintendent Ruddick, of the dairy school, at Kingston, inquiring for addresses of Canadian butter exporters; he desires to handle the article in his country, "as Canadian butter has a good reputation on our market." He also asks for the name of the paper most read by butter manufacturers and exporters in Canada.

It is significant, not only of the variety of products which the rich soil and warm climate of Essex county, Ontario, will produce, but also of the growing interest taken in tobacco-raising in the western part of the province, that among the prizes offered for farm animals, chickens grain, dairy produce and fruit, the Hiram Walker & Sons Company, Limited, offer $100 in prizes, at a County fair, nearly half of which are for tobacco in leaf and Indian corn.

Prof. Robertson, Dominion Commissioner of Agriculture and Dairying, has gone to Grimsby, Ont., to superintend the preparation of the first of the trial shipments of fruits and vegetables in cold storage, which will be made this week by the steamship "Merrimac," of the Dominion line, from Montreal to Bristol, and will consist of pears, peaches and tomatoes. Two further shipments are to be made next week, one by the "Iona," from Montreal to London, and the other by the "Sardinian," from Montreal to Glasgow.

Why should not Ontario fruit growers supply the far West of Canada with fruit, instead of dealers at Winnipeg getting it from United States growers? An answer has just been given to this question by the shipment and delivery by the Canadian Express Company last week of a car load of fruit from the Niagara district to Winnipeg. The shipment, comprising seventeen tons of peaches and plums, left Winona on Tuesday morning and reached Winnipeg on Thursday noon. Another car load shipped to Winnipeg passed through London on Saturday last.

Advices from Montreal yesterday report a good demand for teas from jobbers, who are after Japans principally, but the present views of holders are considerably firmer, late advices from Japan showing that the home market is again advanced. A number of importers declare that good drawing Japans of medium quality are sure to be scarce; as an evidence of the strength of the market, it is stated that teas costing 14 cents two months ago could not be bought under 16 to 16½ cents to-day. China green teas are reported difficult to buy, Pingsueys especially showing firmness, and reported 10 per cent. firmer than last year, Ceylons and Indians also being firmly held.

The Grocers' Exhibition, to be held in London, England, 30th Sept to 7th October, will have double the number of exhibitors that last year's had. The Government of Queensland, Australia, has secured space for a display of the products of that colony, having been the first of the colonial governments to take this step. Prizes will be given on the occasion for essays on how to fit up and start a grocery store for $2,500 and $1,250; for grocery, provision and oilmen's window displays by photographs; for wrapping parcels, writing tickets, drawing advertisements; for blending teas at given costs from materials provided; for writing a letter on a given subject; for naming seven samples of rice; for the simplest methods of detecting the adulteration of butter, or the percentage of chicory in coffee, and of foreign fats in cheese; for the best display of butter from materials provided; for boning and rolling a side of bacon; for boning a ham; for an essay on the management of branch stores; for a tasting competition in butter and margarine. The majority of these competitions are open only to assistants; one or two only to master grocers or managers; and others to any of these classes.

DRY GOODS ITEMS.

The New England Cotton Manufacturers' Association will hold its sixty-third annual meeting, in Philadelphia, in the auditorium of the textile school, on Wednesday and Thursday, October 27th and 28th.

A Hungarian has invented a machine for spinning direct from the raw material. The raw cotton runs through a revolving pipe, is taken hold of by a rapidly revolving fly or flanged spindle, which spins it to fine yarn.

A London woman has been killed in the crush at a bargain sale at which twenty-two policemen were employed to hold the crowd in check. The verdict of the coroner's jury was: "Deceased died from syncope caused by the exertion and excitement of getting into a bargain sale, and that such death was due to natural causes."

The managers of the Rational Dress Congress in England do not appear to have made a very rational attempt at its introduction on Saturday last. It had arranged with seven women's cycling clubs to make a bloomer demonstration by wheeling from London to Oxford. The movement was under the patronage of Ladies Colin-Campbell, Randolph Churchill, Henry Somerset, Lord Coleridge, Sarah Grand, W. T. Stead, and others. Prizes were offered for the best three costumes, skirts being barred, and the meet was to be at Oxford. At ten o'clock on Saturday morning a large crowd gathered in Hyde Park to witness the display, but only three riders appeared. One of them wore a short black jacket with red lapels, a high collar white shirt, red necktie, a straw, and voluminous black bloomers. The second competitor wore a light blouse of sage green, a bolero hat, and a skirt like a bishop's apron. The third contestant had on a Trilby hat and a long coat, with gaiters. All three of the bicyclists were unmercifully chaffed by the crowd. The riders could not stand the storm of chaff, and eventually fled, amid the cheers of the crowd.

One of the United States consular clerks, Mr. Hubbard T. Smith, who has just returned from Europe, tells the Philadelphia *Ledger* that retail prices of various sorts of dry goods are much lower in the States than in European cities, though the contrary is supposed to be the case, and most certainly was the case twenty or even ten years ago. "I have been wondering," says Mr. Smith, "at the prices which I find displayed in the store windows for articles of wearing apparel. The same quality of hosiery, undergarments, neckwear and the like cannot be purchased in any leading city of Europe at the prices these articles are being offered at here. If sent abroad again I would not upon my return take advantage of the clause in the new tariff Act which permits returning Americans to bring in free of duty merchandise to the value of $100. In texture, cut, finish and workmanship the garments made and sold in this country, whether for inside or outside wear, are superior to those which can be obtained abroad for anything like the same price." The experience of Mr. Smith has been that of a large majority of Americans who have visited Europe.

ANSWERS TO ENQUIRERS.

R. B., Montreal, writes: "I saw in THE MONETARY TIMES' Montreal letter last month something about a scheme to use power from the Sault rapids of the St. Lawrence, near Massena, N.Y., and harnessing them for power purposes, to transmit that power electrically or else to utilize it in Massena. Have you any particulars of this enterprise?" [In reply we would say that the prospectus is issued of the St. Lawrence Power Company of Massena, N.Y., Incorporated in New York State in 1896, to use water power and electrical power for manufacturing and chemical industries. Bonds to the extent of $2,500,000 at six per cent. (first mortgage 30-year gold bonds) redeemable in 1927, secured by a first mortgage of the company's franchises and 1,600 acres freehold lands in New York State. The trustees for these bondholders are Hugh M. Matheson and John M. Macdonald, of 3 Lombard st., London, and the U. S. Mortgage and Trust Co., New York. The consulting engineers of the scheme, who report favorably upon it, are Kincaid, Waller & Co., London, and John Bogart, New York. We have not heard with what success these bonds have been floated.]

A correspondent in Windsor sends us an account of a new form of thousand mile ticket, the result of arrangement between the railroads and their patrons. He says it is for sale at the leading Michigan Central ticket offices. "The ticket is sold for $30, with a rebate to the purchaser of $10, when used up in compliance with its conditions, and is accepted on all the lines in the Central Passenger Association, forty-five in number and covering a vast extent of country." He asks if the Grand Trunk and C.P.R. issue similar tickets. In reply, we would say that, upon enquiry, we learn that they do not. These two roads sell a 1,000-mile ticket for $25, with no rebate. Doubtless the rebate feature of the M.C.R. ticket is a device to defeat scalpers, who are not deterred from plying their calling in Michigan by the fear of two years' imprisonment, as they are in New York State.

BOOKS RECEIVED.

The Money Question.—This short work of 200 pages (price, 50 cents), by Henry V. Poor, of the well known New York publishing house of H. V. & H. W. Poor, Broad Street, is described as "A Handbook for the Times." Starting with the question "What is Money?" the author deals with the money in use in the States, and speaks of the functions of Government in relation to metallic money. After describing at length the Bank of the United States, its overthrow and the inflation of the currency, as well as the debasement of silver by the Act of 1853, he deals with the re-monetization of silver, bi-metallism (which, as a proposition, he declares to be an absurdity), and suggests a remedy for the unsatisfactory condition of currency matters in the States. This remedy is "a return to a symbolic currency, alike for the Government and the people. . . . The first step, to quiet alarm, is provision for funding all the notes into bonds having a value in gold equal to their nominal amount;" the second, to remove the tax upon circulation of the State Banks; the third, the return to the National Banks of the bonds put up by them as security for their notes.

The Neo-Protection Scheme of the Right Hon. Joseph Chamberlain, Secretary of State for the Colonies.—This is one of the Cobden Club pamphlets, and is by the Right Hon. Lord Farrer. On the last page we find this sweeping sentence: The difficulties in the way are, the writer declares, "so great as to justify a general and absolute conclusion that no scheme can possibly be proposed on Mr. Chamberlain's lines which is not open to fatal objections." There! So determined an utterance from such a source ought surely to settle the whole question. Dare anybody else speak?

The Stone Industry in 1896.—We have received from the United States Geological Survey, a statistical pamphlet on "Building Stone in the United States,' by Mr. William C. Day. It is one showing the condition of the industry in the United States during the calendar year 1896. These reports are published annually, chiefly from information received through direct correspondence with the various quarrymen of the United States.

Statutes of Ontario.—The volume containing the Ontario statutes passed in the sixtieth year of Victoria's reign, being the third session of the eighth legislature of the province. Toronto: Printed by L. K. Cameron, Queen's Printer.

OUR TRADE IN EGGS.

Produce merchants complain that the eggs received from various parts of the country this week have not been of uniform quality. Some of the shipments upon inspection showed deteriorated quality. The blame must rest with either the farmer or the country merchant. Probably both of these factors in the trade are responsible for a measure of the losses resulting from the sale of eggs off condition. The serious consequences of failure to collect eggs is seen more especially in the export business. The cold storage arrangements that have been provided by the transportation companies will be of little avail unless all parties cooperate in making prompt deliveries of supplies. Great Britain imported during the seventy months ending July 31st eggs valued at £2,382,247, a profitable business for the producers of which Canadians may obtain a greater share than they now possess by the exercise of care and diligence. The Dairy Commissioner notes of several shipments to London, Eng., that when the cases were opened the eggs became very moist, and were said to be "sweating," or becoming covered with dew. "As a matter of fact, the cause was when eggs from the cold storage chamber were exposed to a warm moist atmosphere, the moisture from the air was condensed on the surface, just the same as the moisture could be condensed on the surface of a glass containing ice water. When the egg cases are left closed two days in a warehouse at the ordinary temperature of the atmosphere and then opened, the eggs are warmed up gradually. After that this trouble which is called 'sweating' does not occur."

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Sept. 9th, 1897, compared with those of the previous week:

Clearings.*	Sept. 9.	Sep. 2.
Montreal	$11,966,156	$11,645,323
Toronto	6,494,402	6,843,235
Halifax	1,081,141	1,070,084
Winnipeg	1,425,275	1,428,634
Hamilton	599,800	563,983
St. John	597,677	608,686
	$22,164,451	$22,159,945

Aggregate balances this week, $3,141,233; last week, $2,908,098.

* Labor Day Holiday, 6th.

—A serious phase of the strike in the engineering trades in Great Britain appears to have been reached. The strike has now extended to the various trades connected with engineering. A cable of Sept. 4th says that over 6,000 moulders, boilermakers, finishers, etc., at Newcastle, Sheffield, and other centres, have received notices that their services will not be required after that date. Many of the firms affected declare that they are preparing to move their establishments to the continent, and they add that the question of eight hours work per day is by no means the most important thing involved in the dispute. It appears that the men who are on strike oppose the introduction of new machinery, and are trying artificially to check production. In connection with this strike the Employers' Federation has issued a statement regarding the hours of work in the case of engineers in America, based on the official statistics of the United States Government Labor Bureau, showing that wages are not higher in America relatively to the work done at much higher pressure and with fewer holidays, and that, therefore, the English striking engineers have nothing to complain of in this regard.

—Complaints, neither few nor weak, of the lack of banking facilities for farmers have reached the Cabinet of the United States. And that body is seeking for light upon the problem. One of their number, Mr. Cary, the Postmaster-General at Washington, has been enquiring of the Postmaster-General at Ottawa, respecting the Canadian system of Post Office Savings Banks, and the latter official has sent to Washington a full explanation of the system in vogue with us. An American journal states that Mr. Cary will call attention, in his forthcoming annual report, to the features of the systems of the various countries having such banks, and will recommend that Congress will authorize the establishment of Postal Savings Banks in the United States. If a system such as ours should be adopted by Uncle Sam, it will be wise on his part to avoid the mistake the Canadian Government so long made in paying for years a higher rate of interest than was justifiable.

—Mr. Maclean, for thirty years manager of the Union Loan and Savings Company, has, at his own request, and in compliance with his long expressed wish, retired from its active management; but will, we understand, remain on the board as a director, and continue to give the company the benefit of his long experience and intimate knowledge of its affairs. He will be succeeded by Mr. J. C. McGee, son of the late president, and one of the directors of the company, whose family are among the largest stockholders. Mr. McGee is the possessor of considerable native shrewdness, and has been careful in the management of real estate entrusted to his care. Younger blood now infused into the management, assisted by the counsels of more mature experience, may reasonably be expected by hard work on the part of the executive, to achieve a continuance of the favorable record of the Union Loan.

—The opinion was expressed by the chairman of the Bank of British North America at the annual meeting of proprietors held in London on 2nd September, that Canada was on the eve of a great business revival. Mr. Hoar stated that there was "a general feeling in commercial circles" to that effect. We are left to conjecture whether that meant commercial circles here or in London. At any rate, the bank's profits for the half year were £34,031, as against £25,941 for the preceding like period, and the interm dividend paid is 2½ per cent., as compared with 2 per cent. He was of the opinion that the outlook was most hopeful, and this favorable condition applied specially to the North-West and the Kootenay country.

Correspondence.

SUDDEN DEATH AND PREMATURE BURIAL.

Editor Monetary Times.

Sir,—The case reported in The Monetary Times of July 2nd is one that calls for considerate observations, as it is typical of thousands of others which excite but little interest, owing, chiefly, to apathy and ignorance. In a volume issued by Swan & Sonnenschein, London, on "Premature Burial and How it may be Prevented," a chapter, the result evidently of much patient research in various countries, is devoted to this subject, which, with good reasons, throws doubts upon the reality of many reported sudden deaths, and suggests methods of resuscitation, and the extension of time before interment, to prevent the most terrible of human tragedies.

The authors do not believe in the existence of sudden death, and support their opinions by citations from the highest authorities in the medical profession. Dr. A. B. Granville (p. 160) says: The customary definitions "lead one to infer that a certain mysterious principle, called Life, has been instantaneously withdrawn from a healthy and well-constituted individual, who was at the very moment, as heretofore, exercising his proper animal functions with a regularity that promised to endure for a long continuance of years. . . . No such phenomena occur in Nature, unless through violence or accident." The *Spectator*, December 26th, 1896, in a remarkable article entitled "What is Death?" says: 'The line between life and death is often very hard to draw, and unless the body has been crushed, hacked to pieces or otherwise destroyed, it is exceedingly difficult to pronounce absolutely that death has taken place. There is practically no criterion of death, except the destruction of the body by violent means, or by extended putrefaction. Any other test breaks down, and can only be described scientifically as likely to denote death."

If the eminent authorities cited in the volume referred to are correct in their views, it follows that the prevailing system of death certification, as practiced in the United Kingdom and the colonies, should be amended as speedily as possible. Death certification without death verification should be made a penal offence. The danger is greatest in so-called sudden deaths, many of which are only cases of suddenly suspended animation, which, as civilization advances, and diseases of the nervous system increase, become more and more prevalent. None of your humane readers could do a greater service to humanity than to call the attention of their Government representatives to the present unsatisfactory state of the law on this vital subject.

Yours faithfully,
Jas. R Williamson.

42 Stibbington Street,
London, N.W., England,
12th August, 1897.

SPEED AND ITS RELATIONS.

A most important consideration in connection with the question of wages and hours, says the American *Wool and Cotton Reporter*, is speed and its relations. Speed makes it possible for an operative to do more on one machine than on another; speed makes it practicable for one mill to make more goods than another; speed, if carried to excess, on machinery not adapted to it, causes loss and expense in manufacture, and hence, gives trouble of an opposite kind. So speed shortens the hours of labor, making it possible to do the same amount of work in less time, and shortened hours bear again on wages, for if the same work is accomplished in less time, it is plain that the laborer should be paid according to the work done rather than the time spent in doing it. Just who are the ones that are to be benefited by labor-saving machinery, who are the losers by an increase of speed? These are all interesting thoughts, and might give rise to no end of discussion and opinion.

Speed is at the back of it all; and the question of speed needs attention and study more now than ever, just because it enters so closely into the great questions that are agitating men, and keeping wide apart the two forces of labor and capital.

The whole tendency of mills of late has been towards the increase in speed of all machinery, with an avowed view to larger production. This is the order of the day. And since it is so, it entails on the part of builders a constant effort to put such machinery on the market as will stand the needed strain, and it entails greater skill and attention and effort on the part of the operative to do the larger amount of work, and do it with the required success and satisfaction.

THE GAIN IN SPINNING.

Spinning is one of the processes that has gradually been increased in speed, till it is fully twice what it used to be not long since; a speed represented by 12,000 revolutions a minute for the spindles is simply incredible, compared with the speeds in vogue twenty years ago. In the worsted industry, which has come more and more into prominence, the combing machine, which is the distinctive machine of the process, has been so developed and perfected that it can be run twice as fast as originally, and do even a larger and better proportion of work than those figures would indicate. The yarn making process has particularly advanced in the ease and speed with which it is accomplished. But it has made no greater strides in this respect than the loom or cloth måking process. These two processes require the most help and attention in their operation, and for this reason, the speed of the spinning frame and the spindle, and the speed of the loom seem more closely to enter into the wage question than other processes in the mill.

THE GAIN IN WEAVING.

A loom that formerly on good stock made 70 picks a minute on woolens and worsteds, is now so made and managed that it will make 110 picks, and this is even not its very best. We speak of broad looms now. The amount of breakage and defects is no greater now than before, and the increased speed has been a clear gain in power of production. On the narrow loom, even higher speeds are maintained.

In the running of the loom, from the point of view of the speed, there are two or three factors that must be taken into consideration. The time taken to throw the shuttle is one of them, the class of stock employd in warp and weft, the solid foundation work of the loom, and the fewness and workability of the various parts. The loom cannot do the fastest work unless the cards and spinning frames have done their work well before them; with all conditions correct, it is possible to attain to very surprising results. A worsted loom running at 130 picks, seems out of the question, yet it is a fact that is well known, and is being done to-day.

In cottons, of course, better time is made. When the writer was at Chicago in '93, the Krowles exhibit had in it a loom on cotton ginghams, running at 280 picks a minute. This is extraordinary, yet taken in general practice, the speed of cotton looms is from one-fourth to one-third faster now than it was 25 years ago. Print cloth cottons are made at from 200 to 210 picks per minute, while ginghams run from 100 to 180 per minute. Plain sheetings run about the same as the last. A like increase has been made in looms that handle other fabrics, such as carpets, silks and linens.

Questions arise now as at the beginning. If one man by increased speed can do what two could once, should he get two men's pay? If not, what pay should he get? Who is to profit by the increased production? What law should be laid down as to the standard by which wages should be paid, and workmen have their wages gauged? Which is the better plan when speed increases production; should wages be increased or hours be lessened? A long list of interesting queries presents itself, and each is the legitimate outcome of the question of speed which it has been our lot to discuss. TEXTILE.

—It is claimed that Lake Erie produces more fish to the square mile than any other body of water in the world.

RELIGION AND LIFE INSURANCE.

The following words are from a sermon by Rev. F. L. Anderson, of Boston:

Many, indeed, are unfortunate, sick, and thrown out of employment, accepting aid with greatest reluctance and yet needing it to keep soul and body together. No one sympathizes with such more tenderly than I do. I want no one in this city to suffer through misfortune, old age or weakness. A large part of my time is devoted to the alleviation of such trials; and no work is done by me more gladly. On the other hand, I hope the lazy will suffer till they repent and become industrious; and that no able-bodied person will through my efforts ever be tempted to give up the noble ideal of independence. When we are old and sick or unfortunate, it is no disgrace to receive aid; but the thought that we ought to be supported, that the world owes us a living, is a disgrace.

"Provision for one's family must include provision for them in the event of the death of the husband and father. I believe it is a Christian duty for every such man to carry a reasonable life insurance. Some object that it denotes a lack of faith in God. Not at all. We have no right to trust God for what He gives us the means of providing for ourselves. If I can provide for my family in any way, however small, after my death, it is my duty to do so; and to fail in it is presumption and tempting the Lord our God. Life insurance is the friend of the poor and the middle class. Rich men do not really need it. Every poor man and woman should have at least enough to bury them decently; and if they have families, enough more to help just a little after their death. What a comfort it has been in hours of sorest trial no tongue can tell. It is not strange that in some of our churches mutual benefit societies are beginning to spring up. A few cents every week means thrift during life and a posthumous blessing of the most needful sort."

THE HARDWARE MANUFACTURER, JOBBER AND DEALER.

A paper read by W. H. Munn before the Wisconsin Hardware Association at Milwaukee, in July last, notices that the hardware business to-day is rich in the variety and extent of articles handled, yet poor enough in profitable results. He comments as follows:

The last decade has witnessed a steady decline in quality and value of nearly all articles. In many cases price, not merit, decides a purchaser. The loss of earnings of most people has partly caused this, and another reason is the growth of business establishments handling a variety of merchandise. These have been and are to-day endeavoring to convince the people that they are philanthropists, serving only their interests. The public press have carried the advertisements of these establishments to the hamlet and farm everywhere, and caused a feeling of distrust among the people toward legitimate business houses.

There has been much feeling aroused, especially in the city of Chicago, and various propositions have been suggested looking to a control and check of these establishments. Legislation has been asked to provide taxation that would render them unprofitable. However lawful this may be, I do not regard it, even if successful, as a final solution of the matter as it relates to the successful conduct of the hardware business.

Looking back upon an experience of 20 years, I can say that my most successful deals have been with articles which I controlled, provided they were of genuine merit and properly handled. There is no doubt that each one of you has had a similar experience. As conditions are at present, there is opportunity for a greatly extended use of this idea in the conduct of the hardware business. There should be goods made distinctive, of merit, reasonable in cost, and distributed exclusively by the hardware trade.

To illustrate: Take the item of enamelled ware, a large quantity of which is in domestic use. Suppose a manufacturer producing these goods could depend upon their distribution alone by the hardware trade. They could be made in different grades, and each article should have quality attached, and sold at relative prices. There would be something distinctive about the goods that would attract trade. This is but one item. There are hundreds of others. Such a policy would tend to elevate the hardware trade, and would place it in line to gain and keep the confidence of the people, but results could not be expected in a day, or many hundreds of days, and only successful results can be accomplished by the co-operation of the entire hardware trade. We have the power; will we use it?

There are hopeful signs, however. Our friends in sister States are organizing associations, and it will not be long before the North-western States will have strong organizations. Yet there must be something of an incentive to keep these associations together; something more than a social time once or twice a year. There must be a belief in an assertion of mutual interests, defined and positive. This cannot but bring successful results, and they will find us together. The manufacturers could be interested in the policy I suggest, They can see the end as well as we can where business is drifting—a condition of things where large establishments will control the distribution of their products, to a great extent restricting their market and making business less profitable.

There is another problem of interest that I wish to refer to—namely, the buying of your staple goods, such as iron, tinplate and other metals, nails and screws. These items and others that could be mentioned, it seems to me, could be bought with considerable advantage at times by a co-operative plan. I am fully aware of the difficulties attending this method as a rule, but it does seem as if the following plan is entirely feasible:

In the city of Chicago there are merchandise brokers who could attend to the business and be paid by commission from the sellers. The secretary of the association should have blanks prepared, and each member be furnished with a supply. Take the item of galvanized sheet iron. Let members who use this in fair quantities—say ten bundles or more is a lot—form what might be called a subscription. Each one send to the secretary on one of these blanks a memorandum of kinds and amount desired, the secretary to forward to the broker all the blanks, provided, of course, several hundred bundles are wanted. He can then secure a price based on the quantity, and advise each subscriber. He would be interested in making the sale, and would secure as low a price as the market would afford, lower than any individual could get. If acceptable to the subscribers they could order their iron, and it would be shipped to and paid by each one individually. In case all did not accept, of course, the broker might have to decline the order, and in case a subscriber was unreasonable he should be barred from future participation.

To large consumers of iron this plan might not be of much benefit, but to a large number in the trade who use a fair quantity it ought to save them money. But the main question to be considered is its development. What would the initiation of such a plan lead to? It seems to me if members would be interested and endeavor to make it a success, good results would be secured. It would lead, I think, to the transaction at our annual and semi-annual meetings of considerable business. We would come prepared with our wants and meet representatives of manufacturers and others seeking trade.—*Chicago Journal of Commerce.*

—Teacher (to pupil)—"Give me an example of the fitness of a name to the thing to which it is applied." Pupil in higher education class—"An orange, for instance. Now, an orange is orange in color, it has the shape of an orange, the taste of an orange, and is really and truly an orange, as its name would lead you to expect."

A WATER POWER SCHEME.

These are the days of water pressure power and factories based thereon. Notice has just been given by the Department of Lands, Forests and Fisheries at Quebec that the rights of the province in the water power formed by the Shawinegan Falls, on the St. Maurice River, and certain islands in the river, will be offered at auction at Quebec this week. There are conditions, viz.:

1. The upset price of the water power is $50,000, payable within twenty days of the sale, but every bid must be accompanied by the deposit of $1,000.

2. Within the first eighteen months following the sale, the sum of two million dollars must be expended for developing the said water power, and for erection of the factories and the installation of the machinery required for its working.

3. Within the thirty months following the said sale, an additional sum of two million dollars must be expended for the same object.

There is nothing small about the hopes or beliefs of the Government, therefore. They are evidently resolved that the works on the St. Maurice must and shall be proportioned to the reputation of those great Falls of Shawinegan.

BRITISH MARKETS.

The Manchester report on chemicals, etc., issued by S. W. Royse & Co. on August 28th, says:

Chemicals.—The signs of improvement, to which we made allusion in our last report a month ago, have scarcely increased in prominence since then. There is a fair shipping business, but from the textile branches—and indeed from the general consuming departments—of the home trade the demand is certainly slow. In alkalies there is nothing of special interest to report. Caustic soda is in better demand, and at slightly higher prices. Bleaching powder is nominally unchanged, but some odd parcels have been offering at reduced figures. Chlorates of potash and soda continue quiet. Ammonia alkali is firm, and makers of caustic soda ash are holding out for an advance. Sulphate of copper is active, and business has been done for early part of next year at a good advance on spot prices. The enquiry for green copperas has slackened, but prices remain steady. Brown acetate of lime is now held for higher figures, freights from America having advanced, but only moves slowly. Acetate of soda continues in too plentiful supply. Litharge is dearer, in sympathy with the considerable advance in lead. Nitrate and acetates of lead are unchanged so far, but foreign white acetate is firmer. More business has been passing in borax, the present extremely low prices being tempting to buyers. Yellow prussiate of potash has advanced, the demand being good, and prussiate of soda is scarce at present. Carbonate and caustic potash are more freely offered at reduced prices. Tartaric acid continues firm at the advance, but rather slow of sale. In the tar products branch we may note that benzoles are latterly a little firmer. Solvent naphtha is easier, and many consumers have their forward requirements well covered. Crude carbolic is weak; consumers are holding off, and can only be tempted by low figures, there being at present little demand for crystals. Creosote is still in good demand for spot delivery; for forward lower prices might be entertained by sellers, but buyers are disposed to wait. Sulphate of ammonia is in better demand on spot, and has advanced slightly in value.

Minerals.—The iron ore trade has lately been somewhat less active, and prices are rather easier. The imports during July last are some 23,000 tons less than during July, 1896, but for the seven completed months of this year as compared with the corresponding period of 1896, there is an increase in weight of 229,180 tons, and in value of £361,682. There is no change to report in the position of Sicilian brimstone, prices of all qualities remaining steady; this year's imports of brimstone up to the end of July are some 1,995 tons less than during the first seven months of 1896, but some £1,596 greater in value. In chrome and manganese ores we can report no alteration; demand is fair and value steady. Phosphates of lime are receiving little attention, and quotations remain unchanged. China clay is not at present being largely consumed in the home trade; shipments from the mines are, however, heavy, as the end of the summer is approaching, and of some qualities it is difficult to get early delivery."

A GIANT ATLANTIC STEAMER.

According to the statement of a New York daily, the largest steamship afloat will leave Bremen for New York on September 14, namely, the "Kaiser Wilhelm der Grosse." She should arrive at that port six days later, for not only is she the monarch of the seas as to size, but she is also—if the calculations of her scientific builders be accurate—the fastest ship in the world. In the "Kaiser Wilhelm der Grosse" the North German-Lloyd Steamship Company have an iron and steel hull 648 feet long, 66 feet wide and 43 feet deep, with a tonnage of 14,000, and a displacement of 20,000 tons.

This enormous vessel has two sets of engines to drive her screws, with quadruple cylinders, occupying separate compartments and working independently of each other. But there are 68 separate steam engines with 124 steam cylinders in the monster. The high-pressure cylinders of the main engines have a diameter of 52 inches, the intermediate cylinders of 89 3-4 inches, and the four low-pressure cylinders of 96 1-2 inches. Her two three-bladed propellers are 22 feet 3 3-4 inches in diameter, while the shafts are of nickel steel, the length of the shafting being 198 feet. The length of tubing in her condenser is 25 miles. Her engines are of the same horse-power as those of the "Campania" and the "Lucania"—30,000—but are so built as to develop a speed of 22 knots an hour.

There will be 1,600 incandescent electric lights on the steamer, and she will carry a crew of 450 men. In the interior arrangements pains have been taken to obtain the greatest comfort for the 1,500 passengers she can carry. Amidships, between the forward and after group of smokestacks, and extending from side to side of the vessel, is the chief dining-room. On the deck above are most of the staterooms for first cabin passengers, with the library, smoking and drawing-rooms.

It is interesting to compare the size of the North German-Lloyd leviathan with some other structures of marine and land architecture. The American *Shipping Record* gives the dimensions of the trim, staunch little mail steamship "Thingvalla," plying between New York and Scandinavian ports, as 299.8 feet long, 37.1 feet broad, and 21.5 feet deep. The "Kaiser Wilhelm der Grosse" could swallow the "Thingvalla" twice over and have room left for one-fifth of the Danish carrier again if the big ship's bulkhead didn't interfere. This comparison applies to length only. Nearly two vessels of the size of the "Thingvalla" could be dropped side by side into the hull of the "Kaiser Wilhelm der Grosse."

The supremacy of the "Kaiser Wilhelm der Grosse" is not to last long, for in January the White Star line's "Oceanic" will be launched. She will be 704 feet long, 24 feet longer than was the "Great Eastern." The "Oceanic" will be 72 feet beam. The "Kaiser Friedrich der Grosse," the "Kaiser Wilhelm der Grosse's" sister ship, which is still on the stocks, is 49 feet shorter than the four-funnelled reigning queen of the ocean.

—Reporter—"Here is an account of the wedding of Gray and that New York heiress." City Editor—"An evening wedding, wasn't it?" Reporter—"Yes." City Editor—"All right, I'll head it, 'Turned Gray in the Night.'"—*Judge.*

Commercial.

TORONTO MARKETS.

Toronto, Sept. 9th, 1897.

Dairy Products.—There is an active demand for good dairy butter, but inferior qualities are neglected. Receipts of the latter have, however, been excessive. Choice dairy tubs and pails are worth 13 to 13½c, and common grades bring 9 to 10½c. Creamery is in fair demand, with prints quoted 19 to 20c, and pails, 19c per lb. The local cheese market is quiet. Receipts of eggs have been nominal, but are quite ample, merchants say, to meet local requirements.

Flour and Feed.—The week's trading has been done on a steadier basis. Prices have not been subject to violent fluctuations, and have remained firm on the basis established at the close of last week. There has been a healthy demand for flour, both from local consumers and by way of export. Several fairly large transactions were reported on the street for export shipment. Business with the Eastern Provinces is improving, and dealers report a good trade with the Province of Quebec. In bran and shorts trade is dragging, and values remain depressed.

Grain.—The wheat market has been firm and somewhat steadier during the week. Quotations remain about as quoted in our last issue. New wheat is coming in freely, and is bringing 85 to 87c per bush. in western part of the province, Buying has been stimulated partly by estimated world's shortage, according to the Austrian Minister of Agriculture. In round numbers the deficiency was as follows: Wheat, 182,000,000 bushels; rye, 193,000,000 bushels; barley, 106,000,000 bushels; corn, 165,000,000 bushels; and oats, 162,000,000 bushels. While it is probably true that the prospect for the crop in Argentina is favorable yet it seems evident that there is a scarcity of old wheat to meet immediate requirements, as there have been orders in this and other American markets for wheat and flour for early shipment to Argentina. According to the leading European authorities, notably Broomhall, the recent reports respecting disappointing crop returns in Europe and a material deficiency in the world's production were well founded. Oats are steady and firm at an advance of 1c per bushel. Peas remain firm on the local market, with quotations 1c per bushel higher. Rye is wanted at quotations, and deliveries find a ready market. The stocks in store at Port Arthur on August 28th were 600,641 bushels, and there were received 84,258 bushels, and shipped 391,035 bushels, leaving in store on Sept. 4th, 293,865 bushels.

Green Fruit.—Great activity characterizes the markets this week. Receipts have been larger than for seasons past, and records are said to have been broken. It is impossible to give quotations, as prices fluctuate from day to day, and the range of quotations is very wide as a result of differences in quality.

Groceries.—The second week of the Exhibition has brought many visitors to the wholesale grocery houses. Orders are very satisfactory for staple lines. Sugars remain firm and find a good movement. Considerable interest is being turned to the new current season's shipments being expected soon. Mcsss. Hill Bros., New York, say with regard to currants: "The Retention law was finally passed by the Greek Chamber on Monday last, and has resulted in a strong advancing market in Greece, the price of Provincials having advanced from 13s. od. to 13s. 3d. c. and f. to 14s. 6d. to 15s. od. c. and f. The crop is variously estimated at from 140,000 to 150,000 tons, and deducting the 15 per cent. taken by the Government, leaves available for export to all consuming markets only from 119,000 to 132,000 tons, which quantity is considered to be well within the consuming power of the various countries. The "Picqua" is due in New York on the 26th. The "Karamania" will arrive in the same port about the beginning of October. "Picqua" brings 1,100 tons; "Karamania," 700 tons. "Tergestre" is still loading at Patras, and it is reported she will not bring in any event above 1,300 tons; "Pontiac" is also loading; quantity she will take is unknown. According to advices just received from France the crop of prunes in that country will turn out a much smaller quantity, of large sizes than was expected.

Leather.—The firmer tendency noted in our last two issues continues. Tanners are making a spirited attempt to secure prices in harmony with the value of raw material, and recent transactions indicate success on their part. Splits have been sold this week at an advance of 2c on quotations a month ago. Other descriptions are also firm.

Provisions.—A continued firm tone characterizes the provision market. Only a few dressed hogs are coming in for butchers' purposes. Bear influences have been strong in American markets. The New York *Journal and Bulletin of Commerce*, 6th inst, says: "The market for hog products has been disappointingly quiet and narrow. The symptoms of returning strength and vigor noticeable last week have unfortunately disappeared, although rather more buoyancy prevailed for a short time early in the week. The temporary firmness was attributed to fair buying to cover and for long account, stimulated partly by moderate receipts of hogs, and partly by the strength in corn, consequent upon the reported serious damage to the crop by the protracted drought. The weakness was most noticeable in the instance of lard, of which the supply has been in excess of requirements. Ribs have been comparatively strong, as supplies are comparatively light and concentrated in strong hands, while on the other hand a few packers have shown a tendency to pound the lard market."

Wool.—A somewhat improved tone has characterized the market during the past two weeks. There is a better demand from domestic manufacturers for wool. Only moderate deliveries of fleece are coming forward and prices remain without change. Elsewhere we refer at greater length to the situation.

MONTREAL MARKETS.

Montreal, Sept. 9th, 1897.

Ashes.—The market continues quiet, no noteworthy demand being reported, and values remain on the easy side. About $3.10 would be about the limit offered for first quality pots, seconds $2.80 to 2.85, pearls about $4.30 per cental.

Cements and Firebricks.—Receipts for the week 9,640 brls. of Belgian cement and 1,300 English; firebricks, 20,000. Apart from a sale of a 1,000-brl. lot of Belgium cement, at about $1.85, there has been nothing special doing since last report. We quote Belgian in an ordinary way $1 90 to 2.00, British $2.05 to 2.10, but an advance in the latter line is very probable, as a cable just received from England announces an advance of threepence a barrel. Bricks range from $15 to 21.00 per M.

Dairy Products.—The activity in cheese export was continued last week, shipments being reported at 81,114 boxes, as compared with 39,598 boxes for the same week of 1896. Last week the shipments of cheese from New York were 12,521 boxes, which shows how Montreal has benefited at New York's expense. The local market is some weaker, probably from ⅛ to ¼c., than a week ago, but no large lots seem obtainable at the reduction. We quote fine Western 9⅝c., Townships 9½c., Quebec 9¼ to 9⅜c. Butter is somewhat inactive at moment, with 19 to 19½c. quoted as extreme prices for choice creamery, Townships dairy 14½ to 16½c., Western 12 to 13c. The shipments to Europe last week were larger than usual, footing up to 28,947 pkgs. The shrinkage in supplies keeps prices fairly steady, at 12½ to 13c. for strictly fresh stock.

Dry Goods.—A good few buyers have been in the city this week, attracted by the millinery openings. Most of them appear to be from the Ottawa Valley, a few from the Eastern Townships, not many from Western Ontario. But they are mostly buying millinery or looking at it; they have not purchased largely of general dry goods. There is nothing very new in values; the flannelettes reported last week as being offered by the mills at cut prices, are only a few cheap lines, the manufacture of which it is intended to drop altogether, and it is claimed that the general tendency in cottons is towards firmness in prices for next spring's deliveries.

Groceries.—Wholesale dealers report a better enquiry in this line, and say that the general tone of their country advices is more cheerful in character, customers looking for better collections this fall and feeling more confident in their ability to meet their own engagements. Importers of teas report quite a good demand from jobbers, who are making fair offers for Japans principally, but hardly up to the present views of holders, which are considerably firmer, owing to late advices from Japan, where the market is again advanced. It is strongly asserted that good drawing Japans of medium quality will be decidedly scarce, and as an evidence of the strength of the market it is stated that teas costing 14c two months ago could not now be bought under 16 to 16½c. China greens are reported difficult to buy, Pingsueys especially showing firmness, and reported 10 per cent. higher than last year. Ceylons and Indians are also firm The refineries hardly find the demand for sugar so active as it has been, but still expect a pretty busy September. Some considerable orders are reported to have been placed from the West for Austrian granulated, fine samples of which have been lately shown, the cost of which, laid down, has been calculated at $3.85 to 3.90 per cental. Local quotations continue at 4 1-16 to 4⅛c. for standard granulated at factory; yellows, 3 5-16 to 3⅜c. The rice milling company is again offering stock of their own milling, and standard B is quoted in a jobbing way at $3.60 to 3.75; Patna, $4.75 to $5. Further advance is reported of two shillings in Valencia raisins from Denia, and jobbers are quoting 6 to 6½c. for fine off-stalk, of which only moderate supplies are yet here. Currants also continue to advance, Filiatras being cabled at 17s. 6d., as against 11s. last year. The firmness in canned vegetables continues, many packers still withholding quotations. A better demand from England is reported on the coast for canned salmon, and there is said to be a possibility of some stiffening in this line.

Hides and Tallow.—The extreme competition in buying hides which has worked so disadvantageously to the trade for some time past, has been to some extent remedied, as by an arrangement just effected, the Quebec tanners have withdrawn their buyer from the market, the Montreal Hide Dealers' Association doing the same in Quebec. The regular market quotations are, as a consequence, being more closely adhered to. Dealers are buying on the basis of 8c. for No. 1 beef hides, quoting 9c. to tanners; calfskins, 8 and 6c. for Nos. 1 and 2 respectively; lambskins are advanced this week to 50c. Tallow as dull as ever; butchers only realize 1 to 1¼c. for their rough tallow, and rendered is slow to move at 3 to 3½c.

Leather.—There has been some activity in sole leather, and a large sale of some 20,000 sides to a local shoe manufacturing house is reported to have been put through, at somewhere between 21 and 22c., the quality being No. 2 B.A. Some fair business is also said to have been done with Quebec, and values are decidedly stiffer, 27c. being asked in some cases for No. 1 slaughter. Some fair purchases of glove grain and pebbled black leathers are also reported of late, and stocks in these lines are low. We quote:— Spanish sole B.A. No. 1, 23c.; do. No. 2, 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 25 to 26c.; No. 2 do., 21 to 23c.; common, 20 to 21c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c.; Scotch grained, 30 to 35c.; western splits, 21 to 24c.; Quebec do., 16 to 17c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—The features of the week are further advances in iron pipe and pig lead. The former article has been subject to three advances in ten days, and for the latter $3.75 is now the general asking price. Bar iron is weaker, and owing to American competition it is said the mills have quoted as low as $1.25 in quantity. There is no special activity in pig iron; a few small sales are reported of Summerlee at $17.50, and Hamilton at $16 for No. 1. Scotch warrants are cabled at 44s. 9d. We quote: Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $16.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6.00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates —Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do , I.X., $3.90 to 4.00; P. D.Crown, 1 C , $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 75;

sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 8½ to 9c.

Oils, Paints and Glass.—Business seems gradually bettering in these lines, and orders for fall business are coming in fairly well. The firmness in linseed oil, noted last week, is well held, and it is stated that to lay down raw oil, at present cabled quotations, it would cost 44c. Castor oil is also firm, as well as turpentine, at late advance. Seal oil is rather stiffer, 48c. being asked for jobbing lots. cod oil is neglected. Dry lead has advanced ten shillings lately. We quote:—Turpentine, one to four barrels, 44c.; five to nine barrels., 43c., net 30 days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels., 42c.; boiled, one to four barrels, 46c.; five to nine brls., 45c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 48c. per gallon in small lots. Castor oil, 9½ to 10c. as to quantity. Leads (chemically pure and first-class brands only), $5.25, No. 1, $4.87½; No. 2, $4.50; No. 3, $4.12½; No. 4, $3.75; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; window glass, $1.30 per 50 feet for first break; $1.40 for second break; third break, $2.90.

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

TEN DOLLARS A MINUTE!

This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the

METROPOLITAN

Life Insurance Co. of New York

Assets, ... $25,592,003 78

The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.

Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of Insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

HEAD OFFICE:
Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,

AMERICAN FEELING TOWARDS CANADA.

As every observant Canadian knows, there is a deal of bitterness felt towards Canada by a very large section of the American people. It has puzzled many persons to account for this, and various reasons for it are offered. The well-known economist, Mr. James Bryce, speaking before the British Association, on the "Jingoes" of the States and Britain, and the harm they do, declares that "beyond all these noisy, querulous, and quarrelsome voices there stands in Great Britain—there stands, I am no less sure, in the United States also—the great, solid, sensible mass of the nation, which desires to attend to its business, and desires not to have it disturbed or shaken by rumors of wars; the great mass which deires to fear God and honor the sovereign, whether the sovereign be called a Queen or President. And I trust that in all three countries this great, solid and weighty mass of responsible national opinion will prevent these noisy voices from ever provoking real danger between these kindred people."

But the Manitoba *Free Press*, which has been considering the subject, thinks Mr. Bryce mistaken in speaking of the great mass of the American people as desiring peace and tranquility, and adds: "If it were possible to count noses, we believe it would be found that the majority, and a considerable majority, would have to be ranked as jingoes. Not that they may not desire peace and tranquility, for the jingo is not always and necessarily a warlike person; but by their speech and conduct they would have to be ranked among the noisy, querulous, and quarrelsome fellows, the makers of mischief, who thing it necessary to their own patriotism to speak abusively of other countries, and especially of Great Britain. But there is a mass behind, not so large as Mr. Bryce would lead us to believe, but substantial nevertheless, solid and sensible, who have no sympathy with the brawlers. If they do not count as many at the ballot box, they count for more in the last resort in directing and controlling public policy. They are not less American than the jingoes, but their Americanism is of an infinitely better sort. With them, as with all true patriots, there are worse things than war, but a resort to war would only appeal to them as the last extremity of a very bad case. They do not think such an extremity can ever arise with Great Britain, and they do not fear that the jingoes can ever imperil the two nations; but should there be danger of it, there would be such a roar of indignation from Maine to Mexico as would startle the most reckless politicians of the United States into good behavior. That so many newspapers are jingo is owing to the fact that they find more readers among that class, and they think it good business to cater to them."

Now to see what a Detroit manufacturer, who has lived for thirty years on the borders of Canada, and knows something of the Canadian people, their character, and their trade, thinks: H. N. Pingree, Governor of Michigan, has this to confess:

"The English people are a little sore on us now, but they are good people—people of the same race and blood. Why, they had all sorts of meetings advocating arbitration a few months back. They know what war costs, and we have had enough experience in this country to know the price of it, too. But every time a little fellow wants something to talk about he starts a war cry. I guess not many of the people in this country are hunting for war. The English are getting excited, it seems. They don't know as much about our Congressmen as we do. We don't want war with Canada. We want reciprocity. I learn that we get several times as much money from Canada each year as Canada gets from us. Detroit ought to be a big jobbing centre. But we are hemmed in. On one side we have Canada, with its market shut out from us by a tariff. On the other side we have to come into cut-throat competition with Chicago. Detroit would be a much better business town if we could trade openly with Canada. It would help all towns along the border to have reciprocity."

OUR QUARANTINE SYSTEM.

At the meeting of the British Medical Association in Montreal last week, Dr. Montizambert, of the Canadian Quarantine Station in the Gulf of St. Lawrence, made an address on the subject of infectious diseases, and precautions against them. We condense his paper, as under:

The general consideration of infectious disease in connection with the subject of this discussion divides itself naturally under two heads: The prevention of disease from without getting into the country, and the dealing with it once it has entered in. A system of arresting disease at the coast and frontier entrances, and a system of preparedness in the interior communities. Neither of these is sufficient without the other. Coast quarantines and inland health organizations form the double line of sanitary defence; or to borrow an illustration from the game of cricket, the coast quarantine may be compared to the wicket-keeper, and the inland health board to the long-stop. The interior communities throughout the length and breadth of the land have an interest, and a very close and vital interest, indeed, in the fittings and working of the quarantine service at the various ports of entry. But confidence in a quarantine system, however perfected, must never be allowed to lull us into a false sense of security to the neglect of striving ever more and more towards the sanitary improvement of the cities, villages and districts in which we dwell.

From the long period of incubation of some of the infectious diseases, and the relative shortness of the voyage from many ports outside the country, occasional cases of infectious diseases in the stage of incubation, and the micro-organisms of disease lurking in unsuspected clothing or merchandise, may pass from time to time, in an invisible and unrecognizable stage and condition, the most efficient quarantine that is practicably possible. This cannot be entirely avoided without such routine detention of vessels and passengers at the ports of arrival, such routine disinfection of all clothing and merchandise from abroad, and such consequent interference with travel and traffic as would be altogether unjustifiable and impracticable. Quarantines must not be expected to do the impossible; nor must they be leant upon as an excuse for lessened effort inland. The quarantine regulations of Canada are framed upon the same modern general principles as are those of the United Kingdom, as far as they can be made to meet the peculiar conditions of this country. The principles upon which our regulations are founded are immediate inspection, and, when required, prompt disinfection and isolation, with notification inland to precede the passengers.

In them there is no survival of that old routine time detention of healthy vessels from which the modern service has inherited nothing but its most unfortunate and misleading name.

DIFFERENCES BETWEEN CANADIAN AND BRITISH PRACTICE.

In the application of these principles our differences from the practice in the United Kingdom, as laid down in the reports of the British delegates to the International Sanitary Conferences of Dresden, 1893, and Venice, 1897, and in the regulations of the Local Government Board of 9th November, 1896, are mainly in three respects, and these are due to the different conditions of this new and extensive country.

In the first place healthy persons arriving at our ports in infected vessels may be held under "observation" at our quarantines during the accepted period of the incubation of the disease in question from the ascertained date of last possible exposure.

The doctor then describes the British methods of dealing with persons, mail matter, etc., coming into the United Kingdom, and shows why, by reason of the differences in the size and character of the countries, the English ways cannot be applied in Canada. He resumes:

For such reasons as these Canada cannot depend to the same extent as Great Britain upon inland "surveillance." And "observation" of suspects at quarantine must form part of our system of protection. Accordingly in becoming a party to the Dresden Sanitary convention this country accepted its conclusions fully, and without the reservation made by Great Britain in her own case, that healthy persons landing from infected ships shoould not be detained.

DISINFECTION OF MAIL MATTER.

In the second place, under the regulations in the United Kingdom, no mail matter, except that by parcel post, is liable to detention or disinfection; in Canada disinfection of the mails is not forbidden, and is sometimes considered necessary. Notably is this the case, for instance, for the local mail arriving at Victoria from China. But little is known of the sanitary conditions in the interior of China, and that little is anything but reassuring; cholera, the bubonic plague and smallpox being usually present there. The disinfection of the mails from that country is, therefore, considered advisable, especially in epidemic seasons, before their distribution throughout the "Chinatowns" of Victoria, Vancouver and other cities.

In the third place the regulations of the Local Government Board for ports in the United Kingdom limit the term "infected" to infected with cholera, yellow fever or plague.

Under the Canadian regulations actual cases of any of the infectious diseases are removable at quarantine so as to prevent the importation of new cases even of the minor diseases, to become fresh centres for the spread of infection throughout our country. And the arrival of all classes of infectious disease is notified inland from our coast quarantines.

Under this head perhaps the most noteworthy difference between the two countries is with regard to smallpox. In the Canadian regulations smallpox is included amongst the graver forms of infectious disease, and there are indeed special regulations concerning it. According to the English regulations, and the English usage, as reported to me, a vessel arriving at a port of the United Kingdom with smallpox on board, is not considered an infected vessel at all. * * * * * * * *

These are the chief, if not indeed the only, points in which the Canadian quarantine regulations and usage differ from those of the United Kingdom. And they are necessitated, as I trust I have established, by the different conditions of this country.

For the rest, our regulations are based on inspection, prompt disinfection, isolation, and notification inland. They are designed to secure the maximum protection of the public health with the minimum interference with travel and traffic.

With regard to our minor ports and our land frontiers we have regulations which can be fully amplified should an emergency so require. But with respect to the importation of disease from Europe, Asia, Central and South America, etc., via the United States and across the frontier, we put our main dependence upon their protection of themselves by the well-worked quarantines of our southern neighbor, such as those of Boston, New York, Portland and New Orleans, and their admirable national quarantine service under the able administration of Surgeon-General Wyman, who is to join with me in the opening of this discussion.

In conclusion, I beg leave to submit and to maintain that the Canadian quarantine system, as at present conducted, is certainly of most unquestionable utility to this country. (Applause.)

DECISIONS IN COMMERCIAL LAW.

KERR v. ROBERTS.—The plaintiff and defendant were both mortgagees of the same chattels, Roberts under a mortgage made in December, 1889, and Kerr, under one made in February, 1894. Both mortgages were made in good faith, and for valuable consideration. Kerr's mortgage was duly renewed in 1895, 1896, and 1897. Statements duly verified and intended to renew Robert's mortgage were filed in each year from 1890 to 1896, inclusive. Payments were made on the defendant's mortgage in 1890, 1891, 1892, and 1896, that in 1890 being the interest payable under the mortgage for that year. In the statements filed on renewal, each of these payments was shown and credited, but only in the statements for the year in which the payments were made. Thus the statement of 1891 contains no reference to the payment made in 1890, and shows the payments made in 1891 only. So with the other statements. The plaintiff contended that this form of statement did not comply with the Chattel Mortgage Act in that each statement did not show every payment, and that therefore, the defendant's mortgage had lapsed, and that he (the plaintiff) was entitled to the value of the goods which had been sold by the defendant. The words of the statute are that the statement to be filed on renewal which means renewal of a mortgage, shall "show all payments made on account thereof." Judge Ketchum, of Durham county, gave effect to the plaintiff's contention, and held that the defendant's mortgage ceased to be valid as against creditors and subsequent mortgagees in good faith in December, 1891, because of the insufficiency of the statements filed on renewal of the mortgage.

KUNTZ v. MESSNER.—Action brought by assignee for benefit of creditors of defendant Messner, to set aside as fraudulent and void an assignment of mortgage dated November 17th, 1896, made by defendant Messner to defendant Keiffer, for the expressed consideration of $1,050. The defendant Kieffer made two promissory notes, dated respectively May 5th, 1896 and Sept. 1st, 1896, payable three and six months after date, for $1,000 and $500, in favor of Messner, and for his accommodation, and Messner promised at the time of the making of the first note to give him "land security." Messner assigned for benefit of creditors on December 16th, 1896. The assignment of mortgage was registered December 4th, 1896. Falconbridge, J., decided that this promise, though general in its terms, is sufficient to support the security.

THE "GRETA HOLME."—The Mersey Docks and Harbor Board, who are the statutory conservancy authority of the port of Liverpool, claimed damages from the owners of the "Greta Holme," for the loss of the use of a dredger sunk by the negligence of those in charge of the "Greta Holme." The board alleged that they might have let the dredger at the rate of £100 a week during the fifteen weeks she was under repairs The Court of Appeal in England held that the damages were too remote to be recovered. Their Lordships of the House of Lords, after twice hearing argument, reversed the decision of the Court of Appeal without costs, and assessed the damages at £500.

ASSIGNEES, TRUSTEES AND SOLICITORS

will find **The Monetary Times** particularly well adapted for advertising bankrupt stocks. Because it reaches the most likely buyers and more of them than any other publication.

Mercantile Summary.

UNTIL the last year or two, about all the sash, doors, etc., used in Winnipeg were brought in from the United States, and to a less extent from Eastern Canada. Two years ago the Rat Portage Lumber Company put in a plant for the manufacture of these lines, and the business has steadily increased, an enlargement of the plant being necessitated. This lumber company, the *Commercial* understands, will shortly open a wholesale supply depot in Winnipeg for their growing sash and door trade. Mr. Cameron, president of the company, has been in that city looking after the matter.

JACOB B. GRIFFITH, manager of the Hamilton Street Railway Co., assigned to F. H. Lamb. Meeting of creditors 17th September. His stock in the Hamilton Street Railway Company and Hamilton Steamboat Company is, we are told, all hypothecated to various people. The *Spectator* says Griffith has been handicapped by being bound to pay the city more than he could afford out of the road's earnings. "Owing to the introduction of the bicycle and the hard bargain made by the city with the company, the concern has not been able to pay running expenses, and Mr. Griffith's speculation has turned out to be a losing one. He has given the city an exceedingly good service, and has sought in every possible way to serve the public."

THERE is to be a celebration on September 23rd to 25th of the erection of the Grand Trunk Company's new single-arch steel bridge over the Niagara River. The illumination is expected to be very fine. On the first evening the American and Horseshoe falls and Whirlpool rapids will be illuminated. A great collection of variety performers have also been secured, and on both sides of the river entertainments will be given twice daily. Four military bands will give two concerts each day, and each evening there will be a balloon ascension and parachute leap. During the three days' carnival the new bridge is, we understand, to be thrown open for the free passage of the public to and fro as they please. The period will in fact be carnival time around Niagara Falls.

THE creditors of Abraham Cohen, a retail merchant, of Chatham, Ont, who absconded to the United States last December, are applauding the Toronto solicitor, Mr. W. W. Vickers, and the London Q.C., Mr. Gibbons, through whose efforts mainly they secure a better dividend than was to have been expected. Cohen left stock which, being sold at 87 cents in the dollar, realized about $9,300. On being followed to Buffalo by the legal gentlemen named, he at first refused but finally consented to assign, having been arrested under civil process on a charge of fraud and released on bail. He at first offered 40 cents on the dollar cash, for a final release, which was refused; then he offered $3,000 additional, and increased this to $6,000, which was accepted. He assigned to Henry Barber, of Toronto, who went to Buffalo last Saturday to receive the money, which will pay the law costs and yield to creditors 50, if not 60 per cent. of their claims.

FRANCOIS TREMBLAY, general dealer, of Les Eboulemens, Que., lately noted as insolvent, has arranged liabilities of $4,300 at 40 cents on the dollar, 30 cents of it cash. From the same place is reported the voluntary assignment of George Audet, a trader with liabilities of $2,600, and apparent assets of $2,000.——For many years C. Villemaire has been carriage-making at Sorel. He has always been called a good tradesman, but has sold his goods on long credit, and latterly has had to face the strong competition from the factory-made goods. He failed and compromised six years ago, but does not seem to have been able to "pick up" since, and is again reported assigned.——A judicial abandonment of his estate has been made by Jules Parent, a general dealer at Beauport, Que. He married a couple of years ago, and his wife figures for a dower claim of $3,000, his total liabilities being $4,900, with assets of about $700.——From Roberval, in the Lake St John district, is reported the failure of Alfred Duchene & Co., general store-keepers, owing about $3,500.——Anselme Talbot, a small trader and farmer, of St. Thomas de Montmagny, Que., is on the last gazetted list of insolvents.——H. Girard, general merchant, Lacolle, Que., lately assigned, has made an offer of 50 cents, cash, on liabilities of $8,500, which will likely be accepted.——Joseph Lacasse, trader, at St. Hermas, has gone into insolvency.

THE village of Forest boasts a neat store, of three floors and basement, put up lately by Mr. Morphy, general merchant. The building fronts on Main and King streets, and is 110 feet in length, fitted out with a millinery and mantle-room, crockery and show-rooms, etc. It is 28 years since Mr. Morphy commenced business at Thedford. The style of the business was then Burns & Morphy. They removed to Forest several years ago, and Mr. Burns died in that place. Mr. Morphy continues the business under the style of H. L. Morphy & Co.

The Gurney Foundry Co., Limited,
TORONTO.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

THE largest single cargo of wheat ever carried east of Kingston was that of the "Algonquin," delivered last week at Prescott from Fort William, 82,000 bushels. She drew 16 feet of water.

B. R. LENENTINE, of Middle Southampton, N.B., was a farmer, who began storekeeping in a small way about 1894. He assigned to the sheriff some days ago, and is now offering 30 cents on liabilities of $2,400.

THE New York *Times*, commenting on the liberal gifts to public institutions by rich United States citizens, says that during the year 1893 the total of such gifts exceeded $29,000,000. In 1894 it rose to $32,000,000, in 1895 to $32,800,000, while in 1896 it was over $27,000,000. The *Times* asserts that by no country in the world, and not in history, can these figures be paralleled.

A PLANING mill concern in Montreal, Corbeil & Leveille, are in embarrassed shape, and creditors met last week, at which the firm made a proposition to pay 30 cents in fifteen four-month payments. General liabilities are approximated at $18,000, mortgage liabilities $7,500, and indirect, $19,000. The firm is one of comparatively recent formation, and Leveille came here from the Western States.

THE shoe manufacturing firm of G. Bresse & Co., Quebec, are in trouble, and a demand of assignment having been made upon them, a meeting of creditors was held on the 10th inst., when they made an offer of 30 cents on the dollar. The merchandise liabilities are put at $26,000, mortgage $36,000, and indirect, to bankers, $60,000. This firm was once the leading concern in the line, but the late founder died in 1892, since which date Oliver Bresse, a nephew and one of the heirs, has carried on the business on a more moderate scale, and without the success that characterized the old business.

AN assignment is made by A. A. Pritchard, long in the stationery business at New Glasgow, N.S., and whose late wife had also carried on the business before he married her.——At Springhill, in the same province, James Cameron, grocer, has become insolvent. He failed three years ago.——Hessian & Devine, of Halifax, N.S., a concern doing quite a considerable confectionery and fruit business, are asking a settlement at 40 per cent. on liabilities of some $9,000, nominal assets being shown to be about $6,600. Devine died about a year ago, and the business has since been continued in liquidation.

SOME minor business casualties in Montreal are as follows: Napoleon Pepin, a baker, owing about $2,000, has assigned.——A small grocer, O. Themens has been closed up by the assignee. He owes $600.——Eugene Martel began for himself in the dry goods business last December; he had been for a few months, of the firm of Martel & Marcotte, and originally a clerk. Already he is numbered with the unsuccessful ones, and owes about $3,000.——Joseph Petit, a restaurateur, is unable to pay debts amounting to $2,400, and has assigned; and a small hat dealer, Antoine Desjardins, has done likewise, showing liabilities of $1,214.

IT is estimated that over 25,000 people visited the exposition grounds at Three Rivers on Tuesday of last week. The Premier of Quebec and one of his Ministers were present.

WE are told that the estate of N. P. Finch, general storekeeper, Aylmer, will realize the creditors, who are mostly Toronto merchants, about 70 cents on the dollar. The dry goods stock was sold at 65½ cents and the clothing and boot and shoe stocks were sold at 73½ cents on the dollar.

R. S. CRAWFORD, grocer, Fort Erie, has assigned to Benjamin F. Matthews, and Zeete Brandon, grocer, Sault Ste. Marie, to H. J. Moorehouse An offer by William Mowat, dry goods merchant, Napanee, to whose difficulties we referred last month, has made an offer of 35 cents in the dollar, cash, which creditors accept all but Stewart & McDonald, of Glasgow who refuse.

AN auspicious opening of the St. John Exhibition this week was secured by the presence thereat of Sir Wilfrid Laurier. Hon. Mr. Tarte was with him. The Premier was presented with a civic address of welcome, of non-political character. We are not yet in possession of particulars of the exhibits, but understand that the display is a creditable one.

THE returns of the Canadian Sault Ste. Marie canal traffic up to September 2nd, 1897, were 2,811 vessels, against 3,678 last season. The tonnage is 2,451,159 tons, compared with 3,308,244 in 1896, and the freight carried is 3,128,911 tons, where it was 3,360,790 last year up to the same date. There is accordingly a decrease of 867 vessels of 857,085 tonnage, and to the extent of 231,879 tons.

REV. J. W. WILLIS, Church of England missionary at Mutton Bay, Labrador, has called the attention of Ottawa authorities to the grievances which Canadian fishermen suffer from the easy methods permitted to Newfoundland fishermen along the Labrador coast. It is claimed that Newfoundland fishermen secure the best berths and have to pay no licenses, while Canadian fishermen are required to procure licenses annually. It is claimed that the Department has not paid much attention to the enforcement of the law along this coast.

So great has been the increase of interest and probably investment, by eastern capitalists, manufacturers and merchants in the Far West of Canada as a result of recent mineral developments, that accountants in the East have been called upon to deal with an unlooked-for variety of transactions in British Columbia. Amongst others Messrs. Clarkson & Cross, in the interest of their correspondents in Great Britain and Canada, resolved to send an accountant, Mr. John F. Helliwell, first to consult those in Montreal, Quebec and Ottawa, largely interested in the Territories and British Columbia, and then proceed to the Coast and report. This has been done, with the result that Vancouver has been selected as the most generally suitable point for a branch office. This well-known firm places the Vancouver office under the supervision of Mr. Helliwell, who is well spoken of. The style of the branch is to be Clarkson, Cross & Helliwell, 536 Hastings street, Vancouver.

Mercantile Summary.

The London and Western Trusts Company (Limited) are administrators of the estate of the late George Rounding, of Arkona, Ont.

The Quebec Premier, Mr. Marchand, along with Messrs. Duffy and Dechene, two of his Ministers, were at the Sherbrooke Fair last week. On Wednesday some 20,000 people visited the grounds.

A Halifax daily says that A. B. Cox, manager of the Richardson gold mine at Isaac's Harbor, arrived in the city last week with a brick of gold weighing 250 ounces, being the result of last month's clean-up at the mine. The brick is valued at nearly $5,000.

The rafting operations of the Fredericton Boom Company were on Friday last about completed for this season. The company has rafted this season the following quantities of lumber; Spruce, 142,969,193 superficial feet; cedar, 10,820,440 sup. feet; pine, 8,982,970 sup. feet; hemlock, 32,770 sup. feet. Total, 162,805,373. In addition to the above the company has boomed 44½ tons of timber.

Prof. Robertson, of the Dominion Experimental Farm, said that he considered the Industrial Fair at Toronto the very best advertising medium that could be procured, as it spoke in goods, not in words, and the province would become better known as a consequence. He further said that he was permitted by his Minister to state that, while a good deal had been done for the dairying industry, more would be done in the future, and also more for the live stock business.

Under date of September 4th a circular has been issued to the Customs collectors by the Customs Department, in which is given a concise resume of the different instructions sent out with reference to the preferential clause of the new tariff. In addition to former instructions, the circular permits the entering of articles from all countries granted the benefit of the preferential clause in the same invoice The origin of all the products entered on such invoice may also be attested in one declaration on the form heretofore prescribed, and the names of the countries (if more than one) being written in succession in the blank space reserved for origin of products.

The faith of the searchers for Captain Kidd's buried or sunken treasure at Oak Island, N.S., has become as a great tree. Mr. Putnam, the manager, tells the Halifax *Recorder* that a second pit has been sunk by the side of the first one, reaching down to a dozen feet below; and on Saturday the drill went through several inches of metal of some sort, whereupon "it is felt certain that a second treasure pit has been located, and operations are being resumed." Not only this, but some "new stock was eagerly subscribed, being reserved for existing shareholders." "The men working on the ground," the report goes on, "have preferred taking half their wages in stock, so bright is the prospect." A meeting of 75 persons, members of the Oak Island Treasure Co., was held last week in Amherst, when it was resolved to procure a diamond drill and continue the boring.

GRAND TRUNK RAILWAY SYSTEM

GRAND OPENING OF

The New Single Arch Steel Bridge

Over the Niagara River at Niagara Falls.

THURSDAY, FRIDAY and SATURDAY, SEPTEMBER 23rd, 24th and 25th, '97.

Three red letter days in the history of THE GRAND TRUNK RAILWAY SYSTEM, when this grand achievement of bridge-building will be formally opened to the general public.

EXCURSION FARES will be granted from all points on the whole System, Chicago, Toronto, Quebec and Portland, and a grand programme of amusements will take place on the whole three days, and on the evenings of September 23rd, 24th and 25th a grand illumination of the BRIDGE and River. Some of the finest bands of both countries have been engaged for this occasion. Programmes, giving full details of this magnificent affair, which is expected to excel anything hitherto in this line, will be issued in a few days. The whole affair will be under the supervision of an expert manager.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

AMONG changes in the staff of the Commercial Bank of Windsor, N.S., last week, we learn from the Halifax *Chronicle* that Mr. Arthur Lawson is placed in charge of the agency at Middleton, and Mr. C. F. Armstrong returns to his agency at Truro.

STEPHENS, BRANDON & Co., grocers, Sault Ste. Marie, dissolved last February. Mrs. Brandon continued the business under the style of Brandon & Co., but it didn't go, and now she makes an assignment.——A bicycle repair man at Clinton, named G. F. Emerson, is being sold out by the sheriff.

SHIPMENTS of ore from Kaslo, B.C., in the Slocan country, for August, 1896, were 1,143 tons by 14 mines; last month they were 3 892 tons, in 130 consignments from 20 mines. Two thirds of this went to Pueblo to be treated, some to Everett, Tacoma, Omaha, and Aurora, Illinois. The Payne mine turned out last month 3,100,000 pounds, the Ruth 2,310,000 pounds, the Slocan Star and the Noble Five 510,000 and 431,000 pounds respectively, the Ibex 90,000 pounds.

WORD comes from Montreal that D. Morrice & Co., the well-known agents for textiles, have resigned the agency for the Dominion Cotton Company. It is understood the company will adopt another mode of disposing of its products to merchants. There is a story that the company intends selling direct to the retail trade—going past the wholesale men. We think this unlikely to be true; for in that case the wholesale merchants would promptly import their cottons, and thus intensify competition.

WHEN a merchant leaves a town where he has failed in business, he generally tries to do better in the next place he may set up in. Sometimes he will meet with success, and wonder why he ever stayed in the first town so many years. Again, he may find himself in a strange place amongst strange people, and do badly. Such is life, however. R. R. Crawford was once a grocer in Dunnville, but failed, and went to Fort Erie to start again in the same line of trade. But meeting with no better success in the latter place, has made an assignment.

IT is just a month since C. F. Gallion left Winnipeg and started a harness shop at Rossland. We hear that he has made an assignment.——At one time Jno. McClung was a citizen of Ripley, Ont., but moved from there to Arden, Man., where he engaged in a general store business. He was a school teacher by profession, but whether this fact accounts for his ill luck in mercantile pursuits we are unable to say. But likely trade has been dull and collections poor. Anyway he has assigned.

LAST Saturday evening, Sept. 11th, the shoe district of the city of Quebec was visited by a disastrous fire and three factories were burned. The fire took place in premises occupied by three manufacturers, viz.: Dominion Shoe Co., Mr. J. N. St. Pierre, and Ed. Lapointe. The first floor was occupied by the Dominion Shoe Company, owned by Messrs J. H. Lachance and Z. Crepault. The machinery and stock, which are a total loss, are valued at $25,000, and with only $14,000 insurance. The factory of Mr. J. N. St. Pierre occupied second and third floor. His stock, including machinery, was valued at $75,000, and the building at $40,000, making a total of $115,000; insured for only $15,000. The fourth and last floor of the factory was occupied by the new manufacturer,. Ed. Lapointe, whose loss figures over $20,000, with very small insurance. The three manufacturers employed nearly six hundred people.

THE Canadian Pacific Railway Company has declared a dividend of 1½ per cent. on the common stock for the current half year, payable October 1. This is an increase of ½ per cent. over the April dividend. In 1895 the company suspended dividends; in 1896 it paid 1½ in the spring and 1 per cent. in the autumn.

THE stationery business of Barnes & Co., carried on for so many years by the late James E. Barnes and his brothers in St. John, N.B., has been dissolved by the death of James E. Barnes In future the business will be conducted by George F., James W., and Eustace, sons of the late James E. Barnes, under the old firm name. The practical management of the business will be in the hands of the two first-mentioned gentlemen, both of whom have had a long experience in all the details of their work. The new firm start well equipped for business, and will no doubt continue to fully share the large patronage which they have enjoyed for so many years.

E. D. GOUGH, clothing merchant, has been in business, at Belleville and Toronto for some time, and also in other places, but has operated in the first named cities more recently. At Belleville, in 1893, he became involved, but secured a settlement with creditors at 70 cents on the dollar, on liabilities amounting to $36,000. Again in April, 1896, he made an offer of 40 cents on liabilities totalling $31,000. These transactions left him with a surplus, but very unfortunately his business did not receive the attention which it needed. The result is, he has made an assignment, having assets of $20,000, and liabilities of $35,000. His wife is one of the principal creditors.

IT is reported that the firm of J. A. Cantlie & Co., general dry goods commission merchants, Montreal, whose affairs have been in unsettled shape for some months past, has finally been able to conclude a settlement with all its creditors at 20 per cent. cash.——A demand of assignment having been made upon R. J. Latimer, dealer in carriages, agricultural implements, etc., Montreal, he has made an assignment. Mr. Latimer did a very extensive business with branches in Quebec, Sherbrooke, St. Hyacinthe, and St. Johns, but he depended largely on accommodation from the failed Banque du Peuple, and since the suspension of that institution he has been handicapped. He tried to concentrate and realize his outstandings, but poor country collections have made it hard work, and he has had to assign.——G. Lewis & Co., a firm of manufacturers' agents, handling German dry goods, etc., in Montreal, have made an assignment. Mr. Lewis failed before in 1891. Liabilities are put at $6,000.

TAX EXEMPTIONS.

The convention of municipal experts which met in Toronto serves, if no other purpose, at least to remind the public of the existence of a large proportion of exemptions in connection with church property. And if the convention carries out its purpose to meet every year during the second week of the session of the Legislature, and if it should agree to force the claim for the abolition of exemptions, it may in time produce some effect on legislative action. The forces to be overcome are powerful and vigilant, and the resistance to exemption will be carried to the last ditch. The convention itself was not unanimous in favor of abolition; some members opposed it strongly: finally a resolution in favor of a plebiscite was adopted. A plebiscite would require for its sanction the authority of Act of the Legislature, and as soon as application for an Act is made, the battle ground will be moved to the floor of the Legislature. But the application, to stand reasonable chance of success, would have to be backed by a strong organization out of the Legislature. If the organization is to be carried on, on present lines, and partake of a municipal character, it will continue to contain members who do not favor abolition. This is an element of weakness, and it would promise better for success if there were some organization which could act as a unit on the question of exemption. The whole question of municipal taxation was brought up at the convention. If only one thing were attempted at a time, exemption would stand a better chance than it can if mixed up with the whole range of matters connected with municipal taxation.

MONTREAL HARBOR.

The Minister of Public Works is still trying to persuade the commercial bodies of Montreal that they do not know their own interest in the matter of harbor extension. He would not have Plan No. 6, which they approved; they would not have the plan he suggested. Various other plans have been made, but now one known as No. 19 has received the approval of the Board of Trade council, the Corn Exchange Association committee and the shipping interests, while the Corn Exchange wishes to have added a million bushel elevator. The plan last named has five piers, the longest 1,200, the shortest 800, and the width 230 feet; while the one nearest the canal basin is shortened, and the size of three of the intervening basins is increased; distance from end of pier to guard pier 870 feet. It will accommodate eighteen vessels of 500 feet each. The real commercial interests of Montreal do not take kindly to Mr. Tarte's procrastinating style of argument, and are not likely to consent to the transferring of the active trade of the harbor to the East end.

MINING INFORMATION.

The Pilot Bay smelter is to be reopened for work, we learn from the British Columbia *Mining Critic*, at the beginning of October, or rather later than at first expected. It needed more alterations and modifications than at first intended. It is also stated that working will not immediately recommence at the neighboring famous low-grade silver-lead mine—the Blue Bell—this being doubtless a result of the further recent fall in silver. "But the smelter will have enough contracts in hand, so it is stated, to begin work again on a large scale, without calling for Blue Bell ore."

Mr. Henry E. Croasdaile, general manager of the Hall mines, limited, has issued the following statement of the results of the company's smelting operations at Nelson, B.C., for the four weeks ending August 27th: 5,766 tons of ore were smelted, which yielded 522 tons of matte, containing (approximately) 232 tons of copper, 157,360 ounces of silver, and 215 ounces of gold.

Twenty-five thousand dollars worth of gold has been shipped from Rat Portage during the past week, the product of local mines, so says the *Miner* of that place.

A despatch from St. John's, Newfoundland to the Moncton *Times* announces a great boom in that colony owing to the recent discoveries of coal on the west coast. The deposits are extensive and the seams vary in width from 6 to 3 feet. The quality of the product is believed to be equal to the best Welsh steam coal. Experts pronounce the prospects excellent. Sixty thousand tons are already visible, the telegram adds.

An exhibit which attracted much attention at the Toronto Fair last week was that made by the Rat Portage Mining Exchange, in the Canada Pacific Railway building. It consists of specimens of ore from a number of mines and locations in the Lake of the Woods district. One leading feature of the exhibit which we did not see was the fac-simile of the gold bricks which constituted the season's wash of the Mikado mine. The original bricks were consigned to the Imperial Bank, and were valued at $30,000.

During last month, says Saturday's Rat Portage *Miner*, all kinds of rumors were afloat respecting the output of the twenty-stamp mill at the Mikado for the first month of its working. Estimates, or more properly, guesses, ranged from $25,000 to $50,000 as the value of the first bricks. When the manager of the mill, Mr. Breidenbach, brought the bricks in last week, it was declared that the value of the product, in gold taken from the plates, not taking concentrates into account, was $20,000. The bricks were too large to be weighed on the usual scales used for the purpose, but were weighed on ordinary scales, showing up 946 ounces. Men of experience in such matters, estimate the value at not more than sixteen dollars an ounce, which aggregates $15,136 for sixteen days' actual work at the mill.

A CHANGE of management has taken place at the smelting furnace of the Hall Mines Company, at Nelson, British Columbia. Particulars are given by the *Miner* of Sept. 4th, as follows: "Paul Johnson has resigned his position as superintendent of the Hall mines smelter in order to go to Mexico. His position was taken last Wednesday by W. C. Nichols, formerly of Newfoundland, and a man said to be experienced in pyritic smelting. Mr. Nichols retained his position twenty-four hours. During that time things got badly mixed at the smelter, and, among other mishaps, the blast furnaces 'froze up,' causing a temporary shut-down. Whether Mr. Nichols resigned voluntarily or at the request of the management, is impossible to say at the present time. The retirement of Mr. Nichols resulted in the immediate appointment of Robert R. Hedley, who will act as superintendent from this time on." Mr. Hedley has managed smelters before, having been engaged in copper and gold reduction in Venezuela and Mexico, as well as in the United States.

TORONTO, FRIDAY, SEPTEMBER 17, 1897.

THE SITUATION.

Mr. Tarte's plans for affording Montreal large additional railway facilities on the wharves, permanent elevators, cattle yards, etc., for accommodating the grain and cattle trade of the West do not meet the approbation of all who are interested at that port. He makes the broad statement that there are persons interested in the grain trade and transportation who are opposed to a broad policy of development in Montreal harbor, and he gives as a reason that "they have inferior equipments of accommodation, which will be discarded by improved machinery, just as the cabmen are losing their trade by the construction of electric railways." Without pretending to decide on the relative merits of the two plans of improvement, it is quite clear that even the great advantages of the St. Lawrence route might be neutralized by the use of inadequate and antiquated appliances. The public interest is that our great waterway be not handicapped by impediments such as Mr. Tarte mentions. That the appliances for moving grain on this route have for years been grieviously inadequate is notorious, the hindrances amounting to something little short of a public scandal. If further great and costly changes are to be made, it is essential that they shall embrace the latest and best appliances for attaining the end in view. The case is one in which competition has signally failed, perhaps for the reason that circumstances did not favor its development. On the result of a fast line of ocean steamers, a kindred subject, there are honest differences of opinion; but it cannot have escaped attention that the opponents of such a line have carried their privilege of opposition to the utmost extent of the allowable. Predictions about the new enterprise have been made which were well fitted, and no doubt intended, to promote the defeat of the enterprise; defeat itself has on several occasions been proclaimed when the facts did not warrant the statement. Doubts as to the success of the enterprise were thus engendered, to which delay in perfecting arrangements added. All that is known at present is, that up to date, all these stories have met denial.

In explaining to Belgium and Germany the reasons for denouncing the treaties with these nations, Lord Salisbury is at a loss to understand, there being nothing in the record to show, why Great Britain was ever induced to deny herself the privilege of treating the self governing colonies, or the colonies Great Britain, preferentially. He suggests that it must have been an oversight, or that the consequences of such a restriction were not foreseen. The countries that got such treaties from England received greater commercial advantages from the British colonies than she did, in a form of a balance, they not being put to any cost in respect to these possessions. These two are the only treaties of the kind ever entered into by England; and as they were the first, it is certain that they will be the last.

The fatal shooting in Pennsylvania of eleven unarmed Hazleton striking miners, and the wounding of many more on the public road by the sheriff and his deputies, is difficult to justify, if there be any possible justification for it at all. Already a wild cry of retaliation goes up like an echo, at Chicago, all rich men being denounced as aristocrats, and the life of a millionaire for each life taken at Hazleton, being demanded. Such a slaughter as Hazleton witnessed was sure to engender feelings of bitter hate, which memory will perpetuate. The logic which demands the lives of so many millionaires, of course, makes millionaires responsible for the act, the blunder, as it seems to have been, of the sheriff. Warrants were issued for the arrest of the sheriff and his deputies on a charge of murder. Whatever may come of the charge against these officials, the shooting was a most unfortunate affair. Its necessity is not apparent, the only arms among 150 men being two jack-knives, and they were not possessed for an evil purpose. It looks as if the sheriff had lost his head. If there be any law in that country by which unarmed men may be shot down, on the public highway, the sooner it is repealed, in the interest of civilization, the better.

A question of importance to the shipping interest of England: whether goods taken into the United States in English ships, from ports other than those of British possessions in Europe, are subject to a discriminating surcharge of 10 per cent. duty over the regular tariff rate. The point, it seems, has been referred to the Treasury Department at Washington. There is not much ground for alarm in this supposed danger to British commerce. Both countries are bound by treaty not to put discriminating duties on the goods of the other; that treaty is the supreme law of the Republic, and it is doubtful whether the obligations it imposes can be got rid of in any other way than by treaty denunciation. The ten per cent. discrimination in the Dingley tariff, which was directed against Canada, it is charged by a member of Congress, was surreptitiously inserted, without the knowledge or consent of the joint committee which had the bill in charge. If this charge be true, and it has not been successfully denied, the discriminating enactment is tainted with fraud. Whether the wrong done is one which the Supreme Court can remedy is a new question. If it could be tried and the alleged facts proved, there need be very little doubt about the result. But the doubt is whether the question is one of which the court could take cognizance.

In Ireland the potato crop has once more failed, and the oat crop is in great danger. Excessive rain is the cause. The potato crop failure is reported to extend to fourteen counties, and the outlook is described as more gloomy than any that has occurred since 1847, the year of the great famine. In many places the potato crop appears to have suffered almost absolute destruction; the proportion of oats which it may be possible to save is in doubt. Relief works will probably come in the form of railways built with public money; from friends in America donations will go. But in any case, unless the damage is greatly overstated, the suffering will be great. One trouble is, that large numbers of people live mainly on the cheapest kind of food that will sustain life, and when this fails all the possible substitutes are dearer.

News from the principal roads used by pilgrims on the way to Klondike is not encouraging. Assistant Commissioner McIlree, who has charge of a party of Canadian Police going to the Yukon, writes from Skagway, August 27. He estimates the number of persons on the White and the Chilicoot trails at about 6,000, a number larger than previous estimates assumed it would be. The rainy season had set in; several days of downpour had injured a very difficult trail from the summit to Lake Bennett, which is nearly impassable, and though a 1,000 men have been working to improve it, the vast numbers that go over it in the wet state it is in, soon make it nearly as bad as ever. Mr. McIlree expresses the hope that the additional twenty men who were to be sent on will not go, as he does not see how he "can get them over the summit and provide for them." If this is the case with the Mounted Police, it must be worse with private parties. The 3,000 pack horses struggling to get over the pass are making very slow progress. Some have returned. The sides of the pass are strewn with the dead carcases of pack horses which have fallen by the way. If the statement published on the authority of private parties that a thief, who had stolen food, was hanged, under what is called miner's, but is really Lynch law, at Lake Bennett, be true, it gives a foretaste of some of the duties which the Mounted Police will have to perform at Klondike.

Neither confirmation nor denial of the rumor that the British Government had bought out the franchises and rights of the Panama Canal Company, started more than a week ago, has come. On the face of it, the story is highly improbable. The Bulwer-Lytton treaty, if it has any vitality left, is in the way of such an operation by the Government. True, the United States has more than once said that it does not intend to be bound by the treaty, and it could not hold Great Britain to a bargain which it no longer regarded as binding on itself. The rights of the French company have notoriously been in the market for a long time, and some reconstruction is again going on. It is probable that British capitalists have been approached in this connection, but the British Government, even if it desired to purchase, could scarcely do so on any reasonable terms, if the transaction were direct. The rumor is probably started to spur dull bidders in other quarters into the sort of activity that often results from the presence ofa rival.

RESTRICTING THE EXPORTATION OF LOGS.

In the course of the discussion which has arisen as to the proposed restricted exportation of sawlogs from Canada a number of "prominent" lumbermen are credited by the newspapers with having made some very stupid and absurd contentions. A Saginaw, Michigan, lumberman, Walter S. Eddy, on returning from a trip to Canada, in the course of an interview in reference to this matter with a press representative, is reported to have said: "The Canadian Government realizes that a course of that kind would be practically confiscation of property, and they would not dare go that far. They would be hurting their own best interests. They must market their lumber and sell it to us, with the practical understanding that no prohibitive tariff will be placed on it." If there were no circumstances in connection with the matter other than the ordinary principles upon which the fiscal and commercial legislation of a country is based, this claim would even then be absurd in the extreme. If foreign manufacturers can obtain vested rights in Canada which prevent the imposition of export duties, then how much stronger are the claims of domestic manufacturers to a maintenance of the protective tariff under which they have invested their capital in machinery and factories. The contention is as to the right of the Government to enact this legislation, and not as to its expediency. Governments may forbear to make tariff laws because of the hardship that would result to special interests, but the claim is always a matter of grace, and never of right. When special and general interests clash, it will be readily understood that only under exceptional circumstances can the former be justly given the preference. The United States lumbermen certainly cannot hope to make out a good cause on these grounds.

When, however, we examine into the history of the question, the absurdity of the claim that American lumbermen have acquired vested interests in Canada becomes more apparent. The policy of an export duty on saw logs is not new to Canada. Confederation had scarcely been accomplished when an export duty was placed upon shingle bolts, staves, oak, spruce and pine logs. Export duties were continued on different wood products for twenty-five years, and this policy may be considered, therefore, familiar. The export duty on logs was repealed by the Canadian Government under circumstances that should have been a warning to every owner of timber limits that the trade might not long continue free. Negotiations were carried on between the United States and the Canadian Governments as to the lumber tariffs prior to the remodelling of the American tariff laws in 1890. As a result of an understanding then arrived at, the McKinley Tariff Law enacted that white pine should be admitted into the United States at a duty of one dollar per thousand feet, instead of at the old rate two dollars, "provided that in case any foreign country shall impose an export duty upon pine, spruce, elm, or upon other logs, or upon stave bolts, shingle wood or heading blocks exported to the United States from such country, then the duty upon the sawn lumber shall remain the same as fixed by the law in force previous to the passage of this Act." The Canadian Government repealed on October 30th the export duty expressly in answer to this offer of a reduction in the duty of one dollar per thousand. What is more reasonable than to expect the duty to be re-imposed so soon as the inducements which brought about the repeal have ceased to exist? The governments of the Dominion and the Provinces may have good reasons for failing to pass laws restricting the exportation of sawlogs, but a consideration for the alleged vested interests of foreign mill owners in Canadian timber lands should surely not be allowed to weigh.

BANK OF ENGLAND POLICY.

To the published statement that the Bank of England had resolved to keep one-fifth of its reserve in silver, Mr. Grenfell, one of the directors, has replied. While asking what authority the writer had for the statement, he defends the right of the bank to do what it is alleged to have done. On the main point he says of the resolution alleged to have been come to: "I doubt if any opinion has been recorded, or any determination come to at all." He inferentially admits that the question had been discussed by the directors; what happened after that appears to have been that some director or directors, opposed to the course suggested, gave away the secret of the discussion, and some one to whom it was told put it into the shape of a conclusion already reached. Mr. Grenfell carries the war into Africa. "If I am not mistaken," he says, "the very persons who deprecate this dilution [with silver] have always been most desirous of a much greater dilution by the issue of one pound notes on a more or less fiduciary basis." Both parties at the bank's board appear to have substantially the same object in view: to lessen the pressure of the security which the bank furnishes for the notes it issues. That security consists of having a £ in specie for every £ of notes issued, above a fixed amount permanently loaned to the Government. Mr. Grenfell would attain this end by holding some portion of the reserve in silver; other directors would escape the obligation to hold either silver or gold to so great an amount as is required at present. In view of the decline of silver, the attitude of Mr. Grenfell, and those who agree with him is extraordinary. The position of silver has greatly changed since 1881, and more so since 1844; but the right of the bank to dilute the security for its notes remains as it was at the remotest of these dates. It is improbable that the views of the Grenfel section of the directors will be given practical effect, though hints have been thrown out that the Government is desirous that the change should be made, apparently as a means of "doing something for silver."

THE TORONTO INDUSTRIAL FAIR.

SOME COMPARISONS.

A review of the progress of the annual exhibition which has achieved reputation under the name of the Toronto Industrial Fair, may be not inopportune. The enterprise has been successful almost from the start, not only as a display of what was generally best worth showing in the agricultural and industrial progress of Canada, but increasingly successful as a business venture. That is to say, it attracted larger crowds of spectators year by year; and the financial results from the crowds of sightseers have enabled better arrangements to be made year by year for the satisfaction of exhibitors and spectators. This result was achieved, partly because the managers of the fair had faith in the country, and enterprise enough to offer inducements which should attract its best product, and partly because there was businesslike management and effective supervision.

Just now fault is being found with the management, on the one hand because they have given too great prominence to such "Grand Stand" features as amuse crowds in the evening, and on the other because these features have not been equal in drawing power to like spectacles in previous years. One consequence of the latter issue has been, as a matter of fact, that while more people than ever attended this year's fair, the yield in money taken has been less than last year, mainly because a lesser proportion of visitors paid to see the grand stand performance, which consisted largely of a representation of the Jubilee procession. As to this it need only be said that it is always a question what will attract the greatest proportion of persons to a farmers' and manufacturers' show—and thus give exhibitors a chance of advertisement to frivolous thousands. And therefore it was to be expected that a time must come when the annual increase in attendance and in receipts, an increase prolonged in this case for well nigh twenty years, should give place to a decline, temporary it may be, but still a decline. The critics who score the management for what may be a miscalculation of the public taste in a spectacle do not, it seems to us, give credit enough for the excellence of the solid features of the fair, maintained for so many years. And this excellence, from the economic and educational point of view, is of vastly more importance than the pleasing of thousands per night by means of processions and fireworks.

But all this is apart from our purpose, which is to contrast the solid features of the Fair, the industrial features mainly, with those of ten or twenty years ago. It must be stated, in order to a fair understanding of the matter, that for several years past no prizes or diplomas have been given at this fair to manufacturers. The whole of the $20,000, $30,000 or $40,000 annually dispensed in prizes during these many years was carried off by farmers, horse and cattle breeders, sheep and hog exhibitors—for if we do not mistake, neither dogs nor poultry received prizes from the Fair Association, but from other sources. This arrangement—largely the desire of the manufacturers themselves—offered to the manufacturer opportunity to display his wares to perhaps 160,000 people at the cost of transportation to and from the grounds, with a small additional charge for covered space. He was given no medal or diploma, but he had the advertisement.

Said a man to the writer on the last day but one of this year's fair: "I have been all over the place and exhibits of textiles are conspicuous by their absence. J. P. Murray had an exhibit in the big building and had the enterprise to put up a carpet loom in Machinery Hall, while the Merchants' Cotton Co. of St. Henri show their product in the Main Building, but apart from this there is nothing in the whole blessed place to prove that Canada makes woolen and cotton goods." Now, if the Toronto annual fair is intended to be representative of the best Canadian product of farm and factory, mine and forest, orchard and fishery, there is some ground for the complaint here implied that textile displays are being neglected and a very important department of our national industry is all but ignored. Whose fault this is we do not pretend to say. Whether wool men and cotton men "are tired of exhibiting," as has been said, or whether such displays, here and at fall fairs elsewhere, are considered not to "pay," the fact remains that for what is proudly called an *Industrial Fair* to pass off with no adequate display of textile products is to give to visitors from a distance a most inadequate notion of Canada's progress in a very important field of industry. Not only this, but it is open to question whether our textile mills have, in these days of constant change in machinery and economic methods, reached the stage when they can with advantage "rest and be thankful" to the abandonment of competitive displays.

Sawmills, windmills, wood-working machinery, foundry work, steam engines, condensed air machinery, electric motors, light-producing plant, and various other up-to-date appliances were plentifully shown. Nor was there wanting evidence of creditable progress in manufactures of wood (in which, assuredly, we ought to excel), of rubber, of iron, of leather, musical instruments and agricultural machines. And it is too much to be asked to b lieve that great numbers of people who took an intelligent interest in these would not also be interested in examining products of wool, cotton, flax and silk from our own factories. Tastes differ, it is true, and while tens of thousands may want to see a spectacle, thousands wish to see machinery and the products of machinery. It is a matter of regret, therefore, that while so much of the kind was on view at the fair worthy of examination, our great textile mills were inadequately represented.

But some one says, "Why make a fuss about our textiles? We can buy textiles in the States or Britain better than Canadian mills can make them. What we should develop is the sort of industry that is natural to the country; which the cotton and silk industries are not. Let us manufacture wood goods and export them—this is the truest economy for us."

Our friend is late in the day with his objection; textile industries already exist among us, well equipped and moderately vigorous—albeit, reproached in some quarters as making, of late, too much shoddy stuff, and departing from the robust honesty of fabric we used to swear by. It is not possible for us to say to-day: we will make furniture, sashes and doors, wood floors and wood veneers, but we will not weave silk, or cotton, or wool. While THE MONETARY TIMES considers, and has more than once said, that furniture ought to be, naturally, one of our very foremost industries and a leading article of export, since this country has in abundance the material for producing it in amazing variety, we cannot belittle the mills which make our clothing stuffs, and many fabrics which have found favor in other countries.

TORONTO TRADE FIGURES.

The summary statement of the Board of Trade of quantities and values of foreign merchandise brought into and sent out of Toronto for the month of August last, shows imports of $2,059,193 and exports of only $298,681. For the same month last year the amounts were $1,907,428 and $318,688. Imports were therefore greater last month and exports less. Dutiable goods imported amounted in value to $1,285,375 last month; free goods to $608,227; coin and bullion to $165,591. In August, 1896, these items were respectively $1,208,944, $681,861, and $16,623. Among the dutiable merchandise dry goods show a slightly reduced import; metals, paper and books, leather, jewellery and glass an increase.

Turning to free goods we find that coal exhibits a great falling off, in other wares there is no difference worth remarking except that $112,000 worth of steel rails came in, which were probably part of the C.P.R. purchase for the Crow's Nest Pass road. Below will be found our usual comparison of principal dutiable items:

PRINCIPAL IMPORTS, DUTIABLE GOODS.

	Aug., 1897.	Aug., 1896.
Cotton goods	$93,624	$ 86,912
Fancy goods	82,893	79,106
Hats and bonnets	73,580	61,992
Silk goods	100,827	106,996
Woolen goods	286,949	324,211
Total dry goods	$637,873	$659,217
Brass and manufactures of	$ 6,007	$ 3,354
Copper "	329	759
Iron and steel "	111,743	72,159
Lead "	2,789	5,304
Metals, composition, etc	17,507	7,189
Total metal goods	$138,375	$88,765
Bicycles	$5,413	$12,717
Books and pamphlets	29,091	24,153
Coal, bituminous	15,925	22,105
" anthracite (free)	111,753	156,384
Drugs and medicines	18,548	16,474
Earthenware, stone and chinaware	28,146	21,429
Fruit, green and dried	16,493	10,639
Glass and glassware	21,789	17,646
Jewellery and watches, etc.	28,938	23,749
Leather and manufactures of	26,526	13,607
Musical instruments	6,777	6,511
Oils of all kinds	14,674	15,574
Paints and colors	5,896	7,104
Paper, envelopes, etc.	30,276	23,409
Spirits and wines	5,891	6,285
Wood and manufactures of	4,839	5,599

Exports do not make a good showing last month. Field and forest products were but trivial in amount, while animals and their products were less than in the previous August. Manufactures, on the other hand, were a little larger:

EXPORTS, CANADIAN PRODUCE.

Produce of	Aug., 1897.	Aug., 1896.
The Mine	$ 9	$ 76
" Fisheries	554	......
" Forest	4,081	18,336
" Field	13,672	6,715
Animals and their produce	150,909	186,050
Manufactures	114,776	83,611
Miscellaneous	......	......
Total	$284,001	$294,788

FIRE INSURANCE COMPANIES.

A gathering of some importance to fire insurance in the States was held in Saratoga last week, or rather a series of meetings, for the representatives of 36 non-union companies met on Monday to agree upon their programme to be submitted to the associated underwriters, and the Western Union held its meeting on Tuesday and Wednesday, for the consideration of this offer and for other purposes. What the non-union companies wanted was the excepted cities of Chicago, Cleveland, Cincinnati, St. Louis and Louisville abolished; commissions reduced to fifteen per cent. flat; separation of union and non-union companies enforced; reinsurance placed with union companies, only as far as possible; writing risks over the heads of local agents abolished. These and a few other things done they would join the union.

A committee was appointed to deal with these companies, and the result of a conference was that 23 out of the 36 non-union companies came into the union. Among them are the Western and British America, the Prussian National, the Hamburg Underwriters, the Netherlands, London Assurance, the Helvetia, the Svea, and the Baloise. There were a number of companies which were not expected to join under any circumstances. Among these were the American of Philadelphia, Germania of New York, Buffalo, German, Continental, Delaware, Glens Falls, New Hampshire, Northwestern National, Reliance, Northwestern Underwriters, and Williamsburg City. The results of this conference have been the adjustment of differences and the strengthening of fire insurance aims and interests over a great area of country in both the United States and Canada.

HAS ONTARIO PINE TIMBER TO SPARE FOR MICHIGAN SAW MILLS?

A paper embodying the following interesting facts and figures was read by Mr. John Waldie before the Ontario Government, on a recent occasion, when a deputation of lumbermen waited upon that body with reference to certain desired regulations as to output of logs:

In a review of fifty years, which is a very short period in the history of a country, we find that from 1840 to 1855 this province cut the finest white pine that ever grew—exceeding in excellence the famed Saginaw Valley pine—all along the borders of Lakes Ontario and Erie, and for 30 miles back; and this cutting was followed by settlement, until to-day this is one of our richest agricultural districts, studded with villages, towns and cities.

From 1855 to 1870 the cutting of pine trees for commercial purposes was centred in what may be called the Peterborough, Orillia, Barrie and Collingwood district, reaching the shores of the Georgian Bay, where also the saw mill was followed closely by the settler, until the whole of this central part of the province is covered with fine farms and prosperous towns.

From 1870 to 1885 the cutting of pine was pushed still further back towards the head waters of streams running south and beyond the divide of land, into waters which ran into the Georgian Bay from the Muskoka district. In this district, though not equally as fertile from an agricultural point of view as the land south of it, the saw mill and lumbermen were followed by settlers, and prosperous villages and towns are now the habitation of a large population, and industries other than those incident to lumbering are located, giving a promise of permanence which is a delight to every lover of his country.

Until this date any Americans who came to Canada to engage in lumbering did so with a view of becoming citizens, and of remaining in the province; many of them, with their families now grown up, are amongst our best citizens. To all such we extend a welcome invitation; come and join us in developing the finest country, all considered, under the sun, one which a kind Providence has endowed with what is best for mankind, a healthy climate, in addition to a wealth of agricultural, timber and mineral resources not excelled in any land.

In 1885 to 1897 we have reached a period in the history of the Province, marked with varied and rapid changes in the lumbering business. Owing to the pine tree being further up the stream and more distant from the mills, the business of saw-milling had to be conducted on a larger scale, and instead of having ten small saw mills in a township, we have the large saw mill cutting its supply of pine saw logs from ten townships—quite a change. Only those who could cut from three million to twenty-five million feet had a chance to compete successfully in cutting pine; but the smaller mills are actively and profitably engaged in the sawing of all other kinds of woods, in addition to such pine as remained near them.

The selling of a license to cut timber on large areas of Government lands led to the increase of larger mills, which required the cutting of the pine in the Nipissing and Algoma Districts without any regard to its results in forwarding the settlement of the country, and we find, at present, the following interests owning and controlling nearly all the available pine in the districts named.

1st. The Canadian mill owner who has mills on the shores of the Georgian Bay, at the mouths of the rivers down which the logs are driven, or situated on the south shore where the logs, when towed on the open water, give the mills located there the advantage of railway transportation throughout the year. Those so engaged not only cut the tree, but saw the log into lumber, and attract a fixed population, which is the basis of the prosperity of a country.

2nd. The American mill owner who has bought limits and who has built mills, and is doing his share to give the citizens of the Province continuous employment. Also others who hire their logs cut by Ontario mills. These occupy the same position as do Canadians.

3rd. The Conadian limit holder who is cutting logs to sell to American mills, or who holds limits on speculation. These are a very limited number, although controlling a considerable area of territory.

4th. The Americans whose mills are located in Michigan where the timber formerly tributary in their own country to their mills has all been cut off, and where the mills would be idle if they could not get Canadian logs to manufacture. This is shown clearly by their decreased cut during a period taken from American statistics, viz.:—

LOGS MANUFACTURED INTO LUMBER IN THE SAGINAW VALLEY.

Year.	Feet.
1882	1,439,852,067
1887	1,322,231,426
1892	1,162,017,393
1896	513,585,298

Out of the 513 million feet cut in 1896 nearly half consisted of Canadian logs (the quantity of sawlogs taken that season being 264,236,314 feet, as per clearance returns. This rapid and wasteful cutting, which has left portions of Northern Michigan an uninhabited and untilled territory was not a prudent course.

Therefore, it is the duty of every well-wisher of this province to consider whether in the interest of the general public, and of the continued settlement of our lands, the cutting of pine sawlogs should not be restricted, in so far as the same is being carried on under a license to cut on Crown lands, to such quantities as can be manufactured within our own country.

Further, a limit to the size of the tree cut would be proper matter for the Government to consider, with a view to preserving our forest wealth, where settlement is not impeded thereby.

The relative importance of the saw-mill industries of Ontario which derive their supply from Crown lands will be shown by the following figures taken from the Report of the Commissioner of Crown Lands, viz.:—

For the year	A total cut of	Of which the Ottawa District returned
1893	718 million feet.	109 million feet.
1894	613 "	144 "
1895	800 "	199 "
1896	904 "	184 "

and the Ottawa district includes the cut of mills situate throughout the whole Ottawa Valley in the Province of Ontario.

A careful computation of the lumber manufactured in Ontario from logs of all kinds, pine, hemlock, cedar, and hardwood, leads to the conclusion that the mills situate in and near the city of Ottawa do not manufacture more than ten per cent. of the whole, their supply of logs being chiefly drawn from the forests of the Province of Quebec.

A further division of pine sawlog returns for the season of 1896 shows as follows:

Logs towed for American mills	264,236,314 ft. B.M.
Logs returned for the Ottawa district	184,448,623 "
Leaving for balance of Ontario	455,694,773 "
	904,379,710 "

This shows that the cut of logs from Crown lands in Ontario for American mills has increased by leaps and bounds until it is now 50 per cent. more than what is cut in the whole of the Ottawa Valley. The question arises, where is this to stop?

It must be borne in mind that the Michigan mills have a capacity to manufacture double the quantity of sawlogs ever cut in Ontario in one year. Therefore in the event of a revival of business in the United States, should these mills—their own timber being gone, and they being stimulated by a Government bonus of $2 per thousand feet—increase their cut in the province to what it was in the Saginaw Valley in 1882, viz.: 1,439,852,067 feet, the whole pine tributary to the Georgian Bay would be swept off in less than five years, and every Ontario mill that could not find a local market for its product would remain idle, thereby decreasing the active population of the district by the removal of its most useful and industrious citizens.

THE WESTERN FAIR.

Preparations for the Western Fair have been in progress for weeks. This exhibition is the 24th annual one and it is pleasing to learn that there is a larger number of exhibits than was ever before received, and every available square yard of space in the Main Building was occupied. The western peninsula may well be congratulated on this show. The opening on Monday was not auspicious because of the rainfall, but the attendance increased later, and on Tuesday was more encouraging. Wednesday was Farmers' Day, and Thursday International Visitors' Day.

Dairy exhibits were numerous and creditable, while horticultural and agricultural displays proved somewhat disappointing, and the live stock building is plainly too small. The new cattle and sheep pens proved their usefulness. A good art display is hindered for want of a proper place to show pictures. In the main building a great variety of exhibits had been collected, many of them of interest and value; the place was full, as we have said, and there was the usual sprinkling of tea, candy and toys among the booths.

The pianos of Gerhard Heintzman, which were shown to advantage at this fair, have made a good name for themselves in Canada.

Wm. Buck, of Brantford, made a good show at the Western Fair, as he did at the Toronto Fair, of his hollow ware. He is fortunate in his choice of titles such as "Happy Thought" ranges, "Honor Bright" stoves.

A noticeable display of vehicles was made by Wm. Gray & Sons, of Chatham. It took up, indeed, the whole of one side of the carriage building, and the excellence of the whole makes it difficult to single out any one.

One expects from the McClary Manufacturing Company a good turnout of its extensive product on the occasion of a "home" exhibition, and truly no one need have been disappointed. It is more than fifty years since the McClarys built premises at London, Ont., for the manufacture of stoves and tinware. The trade was then, as for a number of years later, strictly local. But by good management and skill the business has grown until at the present day, with branches at Toronto, Montreal, Winnipeg and Vancouver, they practically cover the entire Dominion from the Atlantic to the Pacific. Everything required for the tin, stove and furnace trade can be supplied from any of these branches promptly. The works at London occupy a floor space of 8½ acres, and employ over 550 hands steadily the year round. The firm manufacture stoves of all kinds, steel ranges, hot air furnaces, hot air registers, and hollow-ware, all kinds of "white flame" and "blue flame" oil stoves, gas cook stoves, and coal oil heaters. The same house makes all lines of stamped tinware, pieced tinware, tinners' trimmings, milk can trimmings, and miscellaneous goods, and carries a full stock of metals and materials for the tin and stove trade. A new department was started two years ago for making enamel steel ware; special mechanics were brought from foreign lands, at a great expense, to superintend this department. Their success in this venture has dated from the beginning. The claim is made that these wares are superior to any previously imported goods, either American, English or German. Every care is taken in the manufacture of these goods from the raw material to the finished product. They make three different brands, viz., "Famous," which is a heavy-coated, gray mottled ware; "Imperial," which is a speckled gray ware; and "White," which is heavily coated pure white, having a blue edge. The factory is complete in every detail, both as regards machinery and mechanics. Every department is in the care of a competent foreman, whose duty it is to carefully carry out every detail of work under his care, so that every article turned out may be relied upon as of honest manufacture. This company did not exhibit this year at the Toronto Fair, having been over-rushed during the season, and had not sufficient time and stock to make a proper exhibit.

It was fortunate, as adding to the interest of the fair, that the Consumers' Cordage Co., of Montreal, made a fine display of binder twine in Machinery Hall, for neither the Patrons of Brantford, nor the Hobbs Co. of London, made any exhibit of this article of manufacture.

We learned on Wednesday that gold medal cards have been given by the awarding committee to Shurley & Dietrich for their saws, etc., to the Carling Brewing and Malting Company, to the Windsor Salt Company, and the Columbia Handle Company. Also that diplomas were awarded to the Winnipeg Heater Company, and Acetylene Gas Burner Company.

ONTARIO CHEESE MARKETS.

The offerings on the cheese boards have been very large. At 18 meetings this week, 42,202 boxes of cheese were boarded as compared with 48,934 boxes offered at 19 meetings a week ago. Transactions were not numerous, as buyers refused to meet the exaggerated views of salesmen. For the week ending September 11th, 71,545 boxes of cheese were sent from Montreal as compared with 31,001 boxes the same week last year. To date shipments are 1,287,454 boxes, as against 1,008,122 boxes during a corresponding period in 1896, We append our usual table of transactions on the Ontario cheese boards.

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.

FOR GROCERS AND PROVISION DEALERS.

George Rogers will erect an elevator of 40,000 bushels' capacity at Carberry, Man. This will give Carberry an elevator capacity of nearly 300,000 bushels.

Reports have been received from Zanzibar stating that the receipts of cloves are running very light, and that the crop estimates have been reduced 25,000 to 30,000 bales.

At Rio thus far this season the receipts of coffee have been 1,149,000 bags, and at Santos 1,945,000 bags; a total of 3,094,000 bags, against 2,181,000 bags in 1896 and 1,479,000 bags in 1895.

A report has been received at the Department of Agriculture, Ottawa, on the condition in which the shipment of early apples in cold storage chamber on the steamship "Kastalia" arrived at Glasgow. The shipper was Mr. Fowler, of Brighton and Montreal, and the cablegram received states that the cold storage was a complete success, and that the apples returned the shipper a handsome profit.

At a meeting of the Montreal Grocers' Association held Sept. 9th, Mr. John Scanlan was elected by acclamation to the presidency. The other officers elected were Messrs. J. O. Levesque, first vice-president; Ald. R. Turner, second vice-president; V. Raby, hon. secretary; J. P. Dixon, treasurer; Peter Gannon, acting secretary; directors, Messrs. S. D. Valliers, J. B. Deschamps, P. Daoust, P. O'Brien, A. B. Hall, J. E. Manning.

Dried fruits, as may be learned from our Montreal market reports, are firm in price, with indications of advance. Valentia raisins are higher in Denia, and the same steamer now en route contains lots bought at different times varying as much as 1s. per package in cost. Currants are scarce and firm, both in the Mediterraneum and on this side the Atlantic. All lines of California dried fruits show strength at an advance of ½c. to 1c., apricots, prunes and raisins.

The following gentlemen have been appointed members of the Grain Standards Board, upon whom the duties of fixing the grades of all Western grains will devolve from year to year; Samuel Spink, Winnipeg, chairman; J. A. Mitchell, Winnipeg; K. Campbell, Wm. Postlethwaite, Brandon; Hon. Findlay Young, Killarney; S. Elkington, Fort Qu'Appelle; James Elder, Virden; James Riddell, M P.P., Rosebank; Charles Castle, Foxton; J. McQueen, Carievale; Peter Ferguson, Kenlis; R. J. Phin, Moosomin; Christian Johnston, Balder; W. D. Underhill, Melita; C. B. Watts, M. McLaughlin, Toronto; T. A. Krane, James Carruthers, Montreal; C. N. Bell, Winnipeg, secretary. The above were appointed by order-in-council as a permanent board for the selecting of samples of wheat and other grains growing west of Port Arthur. It is expected that the 22nd inst. will be the earliest date upon which a meeting can be held in Winnipeg. Full prepartions are under way for the securing of samples from all parts of the Province and Territories.

The results of the recent analysis of table mustard by the Inland Revenue Department has been much discussed. The results of analyzing sixty-six samples of commercial mustard, collected during the month of July, may be classified as follows:—

Name of District.	Genuine.	Sold as Compound of mixtures.	Adulterated.
St. John	1	5	3
Quebec	0	1	9
Montreal	0	0	11
Ottawa	1	4	4
Toronto....................	1	3	4
London	0	1	7
Winnipeg	0	5	3
	—	—	—
	3	19	41

With reference to those which were sold as "compounds" or "mixtures," the degree of adulteration varies from eighty per cent. admixture of foreign substances to an article almost pure, from which fact it is to be inferred that the manufacturers are not yet sufficiently careful regarding the strength of their various grades, nor the vendors fully aware of the character of the goods they sell.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Sept. 16th, 1897, compared with those of the previous week:

CLEARINGS.	Sept. 16.	Sept. 9.
Montreal	$14,194,252	$11,966,156
Toronto	8,188,278	6,494,402
Halifax	1,375,841	1,081,141
Winnipeg	1,450,536	1,425,275
Hamilton	743,383	599,800
St. John	599,364	597,677
	$26,551,654	$22,164,451

Aggregate balances this week, $3,879,051; last week, $3,141,233.

—We learn that Mr. B. B. Stevenson, son of the late Dr. Stevenson, of Montreal, has been appointed to the charge of the Quebec Bank branch in Pembroke. Mr. Stevenson has been for a number of years in the Montreal branch of the bank, recently as accountant.

—A meeting of shareholders in the Bank of Nova Scotia has been called, we understand, for the 2nd of November to consider the increase of capital, recommended by the directors. The paid-up capital is now $1,500,000, the full amount authorized; and it has a reserve of $1,500,000. It is likely that the new stock would not be issued under 200. If the capital should be increased $500,000, at the above figure, which is less than the quoted value of shares, it would give an additional $500,000 besides to add to the reserve.

—It has been arranged that the Maritime Board of Trade will meet at Charlottetown on the 21st instant. The St. John board is to be represented by several delegates who will bring up the question of American 10 per cent. differential duty, on goods imported in Canada over United States territory. It is intended also to discuss the advisability of having a statutory fire insurance policy, for all the companies doing business in Canada. A live subject for their deliberation is the advantage of shorter credits in Canada.

—The expected has happened in the matter of wood imports into Great Britain. Too much timber has been poured into her ports, until stocks are excessive and prices have fallen. At Liverpool alone 390,000 tons of timber vessels have arrived this year, against 342,000 tons last year and 265,000 tons in 1895. The arrivals from British North America during the past month have been 63 vessels, 70,291 tons, against 44 vessels, 49,198 tons during the corresponding month last year. It is not surprising to learn, then, that August business has continued very unsatisfactory. The excessive imports there have been most difficult to handle in the present restricted accommodation allowed by the Dock Board, necessitating in many instances storing goods that would otherwise have gone direct into consumption. Values of some articles have declined, and stocks are now all too heavy. Canadian exporters may govern themselves accordingly.

RONDOT v. THE MONETARY TIMES.

EXTRACTS FROM THE EVIDENCE.

Augustus E. Rondot, called by the defendants, and examined by Mr. Gibbons:

Q—You are a merchant in Amherstburg? A—Yes.

Q—Prosperous, I believe? A—No sir; I am not prosperous.

Q—Showing considerable surplus your last statement? A—Not very prosperous.

Q—What was your surplus last January. A—$6,000 or $7,000.

Q—Fairly prosperous; very prosperous for these times I would say; fairly well off, I would say? A—Not very well.

Q—You were first in business with whom?

A—The firm was Deneau and Rondot.

Q—That firm failed when? A—No; we dissolved.

Q—You failed before? A—Yes, in 1888.

Q—Your liabilities were? A—Between $24,000 and $25,000.

Q—Your creditors lost what? A—They got $12,000.

Q—Then you started again?

A—No, my partner bought the stock out.

Q—When did you start again? A—A short time after.

Q—And you went on until February, 1895?

A—Until June, 1895.

Q—In February, 1895, you prepared a statement of your affairs? A—I did.

Q—And you went to Montreal to see your creditors?

A—No: I was down in May.

Q—20th February, 1895, the statement, that is your writing? A—Yes.

Q—Is that a statement of your position? A—Yes.

Q—How much did you owe then?

A—About $13,000; that is to the wholesale houses; I had some local liabilities.

Q—Were your local liabilities stated in this? A—No.

Q—Why weren't they stated in this statement to your creditors?

A—They were covered by collateral.

Q—What were the local liabilities? To Falls?

A—To Cuddy & Falls, the bankers.

Q—You left out Cuddy & Falls' liability altogether?

A—Yes.

Q—Both what you owed him, Falls, and the notes he held?

A—No sir.

Q—Did you put in the notes he held? A—Part of them.

Q—What part of them?

A—What I considered the surplus.

Q—How much did you consider was due?

A—I have forgotten what that was.

Q—How much surplus? A—I have forgotten.

Q—$500 or $1,000? A—I have forgotten; I don't know.

Q—$2,000? A—Not that much.

Q—That is as near as you can tell me? A—Yes.

Q—You do not keep very good track of your affairs?

A—Not in my memory.

Q—Your liabilities did not sit heavily on you?

A—No; some of the notes I did not think good.

Q—You thought Cuddy & Falls had enough to pay themselves 100 cents on the dollar? A—I thought they had enough.

Q—And how much more? A—I really do not know.

Q—Then you really do not know whether it is any more or not. A—No.

Q—Then you did not know whether you could pay any surplus or not? A—I do not know whether I did or not.

Q—Did you count on any surplus?

A—I do not know I did.

Q—So, leaving out what you owed Cuddy, and the notes he held, this was a statement of what you owed. A—Yes.

Q—This was correct? A—As far as I knew, it was correct.

Q—What did this statement show, on the 20th February, 1805, that you had over and above paying all your debts in full? A—$7,547.59.

Q—Pretty well-off man, weren't you, in February?

A—That is right.

Q—Pretty good position? A—We will show that later on.

Q—You showed this statement to your creditors?

A—I sent to to some of them. Some of the wholesale houses asked for a statement of stock taking, and I sent it to them.

Q—It was this statement upon which you got an extension? A—Yes.

Q—You said to the creditors: "I have got a surplus of $7,457.59: if I get an extension I will pay you in full"? A—Yes.

Q—And did they give you an extension?

A—Yes, for a year: a few objected.

Q—But the great mass of them gave you an extension?

A—Yes.

Q—Gave you a year to pay, without interest? A—Yes.

Q—They threw off the interest, and you said you were willing to pay? A—Yes.

Q—You had $7,547.59 to play upon?

A—That is provided I realized on that.

Q—Is this the statement you gave to them then? A—Yes.

Q—$12,400 you owed, according to this statement. A—Yes.

Q—You had of stock also about $12,000? A—Yes.

Q—So you had enough stock to pay your debts, leaving out the accounts owing you altogether?

A—Taking the stock at cost, and providing I had made sale of the whole thing.

Q—When did the first instalment come due of your extension? A—I forget how it was.

Q—Three, six, nine and twelve months?

A—I cannot say; I think it was for twelve months.

Q—Can you tell me how it was; this extension, how did it make the money payable?

A—I was to pay one-twelfth of the liabilities to each of them each month.

Q—Commencing on the 1st of June?

A—I cannot say; but I think the first was on the 1st of June.

Q—You were to pay one-twelfth each month?

A—Yes; to the large creditors.

Q—Did you meet the first payment? A—No, sir.

Q—You did not meet any? A—No, sir.

Q—You made an assignment? A—Yes.

Q—To Mr. Falls, the banker? A—Yes.

Q—He is a good friend of yours? A—Yes.

Q—He was a creditor of yours, but secured to the fullest extent? A—Yes; in time he will get all his money.

Q—You had a meeting of creditors? A—Yes.

Q—You offered 50 cents on the dollar? A—Yes.

Q—Between February and June, things had altered?

A—Yes; that is the way.

Q—Now your liabilities on the 20th of February, 1895, according to the story you gave your creditors, were some $12,400. Do you know what your wholesale liabilities were in June, when you failed?

A—Yes; they would be a few thousand dollars more.

Q—How many thousand dollars more. A—About $3,000.

Q—Had you been buying goods in the meantime?

A—Yes; I had been buying spring goods.

Q—To what extent?

A—I will not say positive $3,000; but in the neighborhood of that.

Q—When you were in Montreal, with the extension statement, did you buy new goods?

A—I think I bought some goods, yes.

Q—Who did you buy from? A—I bought from several.

Q—You had not paid any creditors any of the extension payments when you failed in June?

A—No, sir: I had paid none.

Q—And you had bought at least $3,000 more of new goods? A—I said in that neighborhood; it might be that much.

Q—You bought some from whom?

A—Thibaudeau Brothers, Gault Brothers, W. R. Johnston, and Mackedie & Co.

Q—Did you show that statement to Mackedie?

A—I did not.

Q—Did you tell him you were getting an extension from your creditors? A—I think I did not.

Q—Mr. Mackedie shipped you the goods A—Yes.

Q—How much? A—Between $300 and $400.

Q—Did you buy goods from Glover & Brais? A—Yes.

Q—Did they ship the goods to you? A—Yes.

Q—Did you tell them you had got an extension?

A—No, sir.

Q—Did you buy any goods from Fisher? A—No, sir.

Q—Did you buy any goods in Toronto? Did you buy any goods from W. B. Hamilton & Son?

A—How I came to buy, I met their agent on the street, and I bought about $300 from them.

Q—When you assigned you owed them for these goods?

A—Yes.

Q—They had only been in a few weeks? A—Yes.

Q—Less than a month? A—About a month.

Q—Mackedie's goods you did not pay?

A—I did, afterwards.

Q—How did you come to pay Mr. Mackedie?

A—He got his money.

Q—You sent him deed of composition to sign? A—Yes.

Q—You asked him to sign the deed of composition for 50 cents? A—Yes.

Q—You paid him what?

A—On the first goods, the oldest goods, he took 50 cents.

Q—Did you ask Mr. Campbell, the assignee, to try and get them all to sign? A—I don't know.

Q—Did you write him a letter that Thibaudeau would get them all to sign? A—I don't know.

Q—When they would not sign, you paid them off?

A—It was a small parcel, and I got money from friends and paid them. They would have got it whether they signed or not.

Q—Did you pay W. B. Hamilton & Son 100 cents on the dollar? A—No.

Q—Why? A—Because I could not.

Q—Have you paid Mr. Hamilton yet? A—I have not.

Q—Mr. Hamilton refused to sign the composition, and you let him stay at that? A—I don't know.

Q—You have got their goods, and you have not paid them?

A—What makes you so hot? You were not so hot when you took me into a vacant room at the Crawford House, linking and blinking, wanting me to employ you or your firm: I think it is very unkind of you; but it does not cost you anything.

Q—You have never paid Mr. Hamilton, have you?

A—I have not.

Q—You got his goods three or four weeks before the assignment? A—You have said that half a dozen times.

Q—You do show a surplus still of $6,000 or $7,000?

A—I did not say anything of the kind.

Q—Now, your statement showing a surplus of $7,547.59 was of the 20th of February? A—Yes.

Q—And your assignment was when? A—June 25th.

Q—All you agreed to offer the creditors was 50 cents on the dollar? A—Yes, all I was worth.

Q—So when you bought these goods from Mr. Hamilton and from Mr. Mackedie, you were insolvent ?

A—I was not insolvent.

Q—Were you in any different position when you bought the goods in May than you were in June, when you assigned ?

A—No; I never saw the time I was insolvent if I could collect the book accounts; I had $1,700 in my books at that time that I could not collect; I had a claim of $1,300, I thought to collect every day, and another of $300, which I have not got yet.

Q—So, between May, when you bought Hamilton's goods, and June, when you assigned, there was no change ?

A—I do not think there was.

Q—Was it the same in May as in June ? A—Yes.

Q—And you were buying goods from these different people ?

A—These were all small parcels, that were nothing in my business, just a small matter.

Q—Mr. Hamilton does not think it a small matter ?

A—I do not know whether he thinks it or anything else.

Q—Mr. Mackedie kicked at your buying goods in May, and failing so soon after ?

A—The way I got the goods in May, Mr Mackedie was just coming out of having failed himself, and he was offering goods at a large sacrifice, and I went in and bought a small parcel of goods.

Q—Is that Mr Mackedie's writing ?

A—I know him, but I do not know his writing.

Mr McCarthy :—I do not see how that can be evidence.

Q—When Mr. Mackedie objected to sign this deed, you paid him up ? A—Yes.

Q—You wrote your assignee, and told him that those that would not come in like this, he should pay 100 cents in the dollar to ? A—I do not know whether I did or not.

Mr. McCarthy :—If they want to urge anything in mitigation of damages, under the new rules, they must plead it.

Mr. Gibbons :—I surely cannot go into the whole character of the failure, to show——

Mr. McCarthy:—The rule now is, if you want to plead anything in mitigation, as to a man's character, and so on, why he should not recover, you must plead it. If your Lordship will note, I object.

Mr. Gibbons :—This is the insolvent himself.

His Lordship :—I note it. The plaintiff is here, and he is here for all purposes.

Q—So you knew that some of these people were getting 100 cents on the dollar, some of those who would not sign ?

A—Well, I expected some of them would not sign, from whom I just got the goods.

Q—You had just got the goods from W. B. Hamilton & Son. You tried to get all these people to sign, Mackedie and all the rest ? That is your writing, isn't it ?

A—Yes, exhibit 7, 1st August, 1895.

Q—This is to Mr Campbell, is it ? A—Yes.

Q—He was the assignee, wasn't he ? Mr Falls was changed, and the creditors appointed Mr. Campbell, of Toronto ?

A—Yes.

Q—"I am sure now it will go through. I expect Mr. Thibaudeau will make arrangements with the firms who won't sign ?"

A—Yes. That is my letter. Exhibit 7.

Q—Now, here is another letter to W. A. Campbell, of the 31st of July. Is that your writing ?

A—That is my writing. Exhibit 8.

Q—Instructing him to pay in full the creditors who refused to sign ? Is that your letter ?

A—I don't know: I did not look at the letter. Yes, that is my writing. I did not know whether you were using it correctly or not.

Q—Now, Glover & Brais were people refusing to sign ?

A—Yes.

Q—You had not bought any new goods from them ?

A—I told you that I bought. Your memory is as bad as mine.

Q—Fishers were people you had not bought new goods from ? A—No.

Q—Did you pay Fisher ? A—No.

Q—Did anybody pay Fisher's claim ? A—Yes.

Q—Who paid their claim ?

A—I got the money from my friends, and the assignee paid them.

Q—Fishers had not sold you any new goods? A—No.

Q—Though you were paying some creditors 50 cents on the dollar, some creditors you paid more ?

A—Very small creditors.

Q—How much do you call small ?

A—Between $300 and $400. Fisher, I think, got 65 cents on the dollar.

Q—W. B. Hamilton, the poor unfortunate, who sold you goods a month before you failed, only got 50 cents on the dollar ? A—That is all he has got yet.

Q—Fisher refused to sign the deed ? A—Yes.

Q—Some creditors got 50 cents, some 65 cents, and some got a dollar, or 100 cents on the dollar, on their claims ?

A—A few small ones got 100 cents.

Q—Now, let us look at this article, and let us hear from you now what it is you complain about?: "His methods of business are not of the most approved type." A—You think so.

Q—You do not think so ?

A—They were good enough to suit there for nineteen years; and, figure it up, you will find I sold over half a million dollars' worth of goods in that time. That looks as if the methods were not very bad.

Q—How much were your liabilities at the time of the last failure ?

A—I told you that before ; $17,000 or $18,000, the last failure.

Q—So there was about $9,000 written off then ? A—Yes.

Q—So, taking your two failures, your creditors have lost $21,000 ? A—Yes.

Q—Over $1,000 a year ? A—Yes.

Q—There were other people there in business, trying to pay 100 cents on the dollar ?

A—That is what I have always done all my life, and am doing it yet.

Q—Other people have tried to pay that, and have paid that all the way along ?

A—I don't know anybody there who is not trying to pay 100 cents.

Q—And others in business were paying it, were they not?

A—I do not know whether they were or not.

Q—You owed a considerable sum ? That is true ? A—Yes.

Q—"A merchant of that town (Amherstburg) made an assignment for the benefit of his creditors to a local banker ?" You are not quarrelling with that ? A—Yes.

Q—"Whose circular asking for proxies indicates him a friend ?" A—That was true.

Q—"A meeting was called and attended, in Amherstburg by representatives of the principal creditors." That is right?

A—Yes; and about that time your partner asked Mr. Hough the same thing, to get me to assign to your firm.

Mr. Gibbons :—But my wicked partner is not here. Better leave him out just now; you have sins enough of your own to atone for ?

A—Well, you need not say anything about the demand being wrong; that does not cut any figure.

Q—Did you offer 50 cents on the dollar ? A—Yes.

Q—"When an offer was made of 50 cents on the dollar of liabilities, to be secured, I believe, by a Montreal wholesale house ?" That was true ? A—Yes.

Q—"And is in a fair way of being accepted ?" A—Yes.

Q—"Although I understand a further or additional 5 cents in the dollar is added to quiet some of the rebellious creditors—and of these there is quite a number ?" A—Yes.

Q—There was a deed of composition drawn at 55 cents ?

A—Yes.

Q—That was all true what I have just read, wasn't it ?

A—Yes.

Q—So there is nothing in that article so far you have to complain of ? A—No.

Q—"Now, I understand that this man has done the same thing before." You do not complain of anything there ?

A—Yes, I do.

Q—"Not many years since. In February of this year he showed a surplus of over $8,000, and got an extension of time, and obtained a further extension in May ?"

A—I did not get an extension in February.

Q—They were wrong in stating there were two extensions ? A—Yes.

Q—That did not hurt you very much?

A—Not that I know of.

Q—"When he visited Montreal and Toronto, where he was toted around by some of our big concerns and pressed to buy more goods ?" A—I was not toted around.

Q—That would not hurt you, to be toted around?

A—No; I would not be ashamed to be toted around.

Q—"And pressed to buy more goods. He did so, though he must have known he was insolvent ?"

A—I did not know I was; and I was not.

Q—When were you in Montreal ?

A—The latter part of May, 1895.

Q—And you made assignment when?

A—The 25th of June, 1895.

Q—You made an assignment, and paid 50 cents on the dollar to your creditors ? A—That is all I could give.

Q—So you must have been insolvent in May as well as in June ?

A—If they had called on me to pay, I could not have paid all.

Q—Your main creditors gave you a whole year to pay, without interest ? A—Yes, that is right.

Q—And, notwithstanding that, you were not able to pay?

A—No; they did not all sign; there were a few large creditors did not sign, and a couple of firms in Toronto did not sign.

Q—There is a letter to John Macdonald, in Toronto, telling him you could not pay. That was right what you said in that letter ? A—I think it was right.

Q—You did not meet the first payment ? A—No.

Q—Your position was the same in May as in June ?

A—Yes.

Q—You were insolvent in May as well as in June ?

A—I could not collect my accounts. I do not think a man is insolvent until his liabilities are more than his assets. I did not consider the assets so bad; in time I could collect them. I made nothing out of the 50 cents on the dollar—not at that time.

Q—Have you made money out of it since ?

A—No; I did not make money out of them.

Q—Then you were in just as bad a position on the 20th of May as you were on the 20th of June ?

A—I think so.

Q—On the 20th of June you were only able to pay 50 cents on the dollar ? A—Yes.

Q—Then your position was the same on the 20th of May ?

A—Practically the same.

Q—So really on the 20th of May your real position was the same as on the 20th of June; you were really insolvent, and only able to pay 50 cents on the dollar?

A—If they had all signed I could have got along.

Q—If they had all signed you could have made a lot of money?

A—They did not all sign. Those who did not sign issued writs, and made a good deal of expense to me.

Q—Was the whole expense $1,000 ?

A—There was some $1,600 of assets.

Q—That would show less than 60 cents on the liabilities?

A—I don't know.

Q—You could only pay 60 cents? A—Yes.

Q—So there was 40 cents short ? A—Yes.

Q—So on the 20th of May when you bought the goods from Mackedie, you were short 40 cents; short quite a bit ?

A—I bought so little, it did not amount to anything.

Q—You bought $400 from Mackedie, $300 from Hamilton, and some from others ? A—Yes.

Q—They do not amount to much to you, at 50 cents on the dollar, but they amount to a good deal to the creditors ?

A—I do not know.

Q—Your assets that were good and available were not equal to meeting your liabilities ?

A—I could not collect some.

Q—You were insolvent as much on the 20th of May as you were on the 20th of June ?

A—I did not consider myself insolvent.

Q —Were you insolvent on the 20th June ? A—No.

Q—When you made assignment you were not insolvent ?

A—I did not consider it so.

Q—You had assets enough to pay in full ?

A—If they would give me time, yes.

Q—You had a year's time to realize ?

A—Yes, and you have an idea how much you can collect inside of a year.

Q—Will you tell me, did you have an idea, on the 20th of May, when you bought the goods from Hamilton, you were in a different position from the 20th of June ? A—No.

Q—On the 20th of May you bought the goods ? A—Yes.

Q—You knew your position. A—Yes.

Q—You knew there were a lot of bad accounts in the statement ? A—Yes.

Q—And that is the reason you had not bought many goods for some time ?

A—I bought a few hundreds, but I could have bought a good many thousands; that is from the 20th of February to the 20th of May, that is six months.

Q—That is not six months ?

A—It is longer than thirty days ; this statement was made in January, right after we took stock, after the holidays.

Q—You made up stock on the 20th February ?

A—Well, it might be.

Q—Was it January when you took stock ?

A—I don't know; I think it was January. I might have made that document on the 20th of February ; it would be taken off the original; that is a copy.

Q—Copied by you ? A—I don't know.

Q—You have got the exact date there, 20th February, 1895, stock list, and that is repeated in a great many places ?

A—I don't know; it might have been dated from what I was taking it from.

Q—Now, you ought to have known your position on the 20th of May ? A—I did know it.

Q—Well, if you knew your position on the 20th of May, it was rather hard on Mr. Hamilton you should go and buy goods from him then, and offer him 50 cents on the dollar in four weeks ? A—Well it was hard.

Q—You would think it hard if a man bought goods in your store and turned up in a month afterwards and offered you 50 cents on the dollar ?

A—It would depend on circumstances.

Q—Had he not had any loss in the meantime, would you think that square ? A—It would depend on circumstances.

Q—Would you think that square ?

A—It was the best thing I could do.

Q—Supposing a man came into your store, and bought $400 of goods on credit on the 20th day of May, and he turned up to you showing a deficiency of $7,000 on the 20th of June, and offered you 50 cents on the dollar, would you think that was honest ?

A—That would depend on circumstances.

Q—Would you consider it honest ?

A—I cannot say; I have had to take nothing lots of times.

Q—Would you think a man who had taken stock in the previous February ought to know his position ?

A—I did know it.

Q—Then you did know you were insolvent ?

A—I did not know I was insolvent ; I had stock there, and if I could collect all that was due me I was not insolvent.

Q—You knew your position as much in May as in June ?

A—Yes.

Q—You knew there were a whole lot of these bad debts that ought to have been written off ?

A—No; some of the bad debts I did not take stock of.

Q—A month after you bought the goods you were offering them 50 cents on the dollar. "I understand a further or additional 5 cents in the dollar is added to quiet some of the rebellious creditors—and of these there is quite a number ?"

A—That is so.

Q—He bought these goods on the 20th of May, though he must have known he was insolvent. Not much crime about that ; more truth than poetry in that ; on the 20th of May you were buying goods, and on the 20th of June you were offering 50 cents on the dollar ?

A—If I had been working on the principle you mean, I might as well have bought thousands.

Q—You must have known you were insolvent. Any sane man would know that ? A—No, sir.

Q—" But that did not deter him from buying plenteously ?"

A—I did not.

Q—" He went home, having made a big splurge, and within a month made the assignment, showing assets of a little over $13,000, and liabilities of over $18,000?"

A—I showed a statement then.

Q—Mr. Falls, your friend, showed a big deficiency ?

A—His statement showed a deficiency.

Q—How much deficiency did he show ?

A—I do not know exactly.

Q—As near as you can tell me ?

A—The way he calculated the accounts, instead of making $8,000 or $9,000, as I did, he only valued them at twelve or thirteen hundred dollars.

Q—The result of which was to show a deficiency of how much ? A—$2,000 or $3,000.

Q—That $5,000 deficiency in so short a time does not sit heavy on you; $5,000 is the deficiency, isn't it?

A—Well, the difference in the book debts would make it.

Q—Did Mr. Falls' statement show a deficiency of $5,000 ?

A—Yes; that is Mr. Falls' statement. Exhibit 9.

Q—So, on the 20th of June, adding up the book debts and stock, there was $5,000 behind ? A—Yes.

Q—Do you think it was an awful crime for THE MONETARY TIMES to say that one month or so before, when you bought those goods, you must have known you were insolvent ?

A—I bought no goods of any account in May.

Q—Did you buy goods ?

A—Yes; but I bought so little, just a small parcel from Mackedie.

Q—Don't you think it is as much a wrong to wrong Mr. Hamilton out of $300 as out of $3,000? You want big damages out of THE MONETARY TIMES for making what you admit to have been a true statement ? A—I don't know.

Q—Don't you think the paper was but expressing the truth when it is said, on your own statements, that you ought to have known your position on the 20th of May, when you bought those goods from Hamilton ?

A—I did know it; that is the reason I went down to get an extension of time ; I did not go to buy goods.

Q—" He went home, having made a big splurge, and within a month made the assignment—showing assets of a little over $13,000, and liabilities of over $18,000 ?"'

A—That is the statement; instead of taking my book accounts as I put them, at $8,000 or $9,000, Mr. Falls put them in at $1,200 or $1,300.

Q—Was that a correct statement of all they were worth ?

A—It was correct as far as I knew. I have collected thousands of dollars out of those accounts since.

Q—And your friend Falls put in a statement showing they were only worth $1,200 ? A—Yes.

Q—And on that you made a settlement of 50 cents on the dollar ? A—Yes.

Q—And since that you say you have collected thousands of dollars of these accounts ?

A—Yes; I have collected $1,000; probably from $1,500 to $2,000.

Q—So you have done pretty well out of your creditors, after all. I thought so ? A—That is all right.

Q—Now, THE MONETARY TIMES asked what I think a very reasonable question: "Where has the $8,000 surplus claimed in February gone ? And where is the shortage accounted for ?" You knew that THE MONETARY TIMES was a commercial organ ? It is supposed to be published for the protection of the trade more or less ? A—I presume so.

Q—It is necessary to have some paper that speaks out in meeting, and tells the truth once in a while, isn't it ?

A—Yes; but not to tell lies.

Q—Well, we have had no lies in the paper so far.

Q—" Now, it is strange that the creditors should so willingly accept the 50 or 55 cents on the dollar offered, just to save a few extra cents for themselves, rather than order the trustee to wind up the estate and expose a discreditable failure It is a premium on dishonesty, and our wholesalemen, guided by prominent solicitors, are acting in a way anything but just to themselves, and are grossly injuring the welfare of the best class of our retail merchants throughout the country." Very hard on the other retail merchants, who are paying 100 cents on the dollar to be compelled to compete with a man paying 50 or 55 cents on the dollar ?

A—I know what it is; I have been there.

RELATIVE TRADE OR ATLANTIC SEAPORTS.

A comparison of the trade of various American seaports in 1896 and 1897 finds place in *Bradstreet's*. That journal says: "Among the more important ports as regards imports, New York showed a falling off from 64.12 per cent. in 1896 to 62.86 per cent. in 1897; Boston an increase from 10.16 to 11.80 per cent.; New Orleans an increase from 1.74 to 2.17 per cent.; Philadelphia an increase from 5.62 to 6.29 per cent.; Baltimore a decrease from 1.73 to 1.49 per cent.; San Francisco a decrease from 5.41 to 4.50 per cent.; and Chicago a decrease from 1.99 to 1.51 per cent. As regards the total foreign trade, the port of New York stood first, with a total of $872,283,487, an increase of eighteen millions, as compared with the preceding year; Boston, second, with a total of $191,035,700, an increase of sixteen millions; New Orleans, third, with $118,112,847, an increase of $23,654,914; Baltimore, fourth, with $97,063,844, an increase of $17,188,309, and Philadelphia fifth, with $95,377,945, an increase of $11,969,733. The total foreign trade for the year was valued at $1,815,728,968, which was $152,392,356 more than for the previous year, and the largest in the history of the country, with the exception of 1892.

TRADE AUCTIONS.

One of the features of business life in London is the extensive use made of the auction sale in the distribution of merchandise. Tucked away in the narrow streets where the great wholesale houses are located, are any number of auction-rooms, where sales are held day after day. Most of these auction rooms are arranged in the form of lecture "theatres," with semi-circular or horseshoe rows of seats rising tier upon tier around the auctioneer's restrum, and can be used for no other purpose than that for which they are expressly designed. The samples are on view on the morning of the day of the sale at the offices of the owners or consignees of the offerings, and so important are these sales in fixing prices that houses dealing in the goods offered keep a clerk who does little else but examine the samples, mark the quality on the catalogue, attend the sales and keep track of the prices realized. There are special sales-rooms for wool, for spices and gums, for dried fruits, for drugs, colonial produce, etc., and all such sales are conducted in the regular way of business and have no tinge of sacrifice or compulsion.

SKETCH OF THE MASSACHUSETTS BENEFIT LIFE.

Mr. Jedekiah K. Hayward, of 38 Park Row, New York, has been counsel for the Massachusetts Benefit Life during the last sixteen years, and is, of course, very intimately acquainted with its affairs. He has given the following interesting history of the association:

"The company was originally promoted by W. G. Corthell, but George A. Litchfield soon obtained control of it and is entirely responsible for its career, from the cradle to the grave. He had no knowledge of life insurance, and in common with a thousand other men, who controlled other assessment companies, made fundamental mistakes. If he had taken the bull by the horns and raised the assessments gradually the company would be flourishing to-day, but as such a course must produce more or less discontent, he waited until he had accumulated two or three hundred thousand dollars arrearages, and then made a large raise at one jump. The suspicion that this was a freeze-out, together with the fact that the expense money was all turned over to Mr. Litchfield to run the company, and for which he was responsible to no one, occasioned great excitement in Massachusetts last year. This excitement culminated in throwing out the whole Litchfield regime and putting in a new directorate, which felt bound to make up the deficit by making two extra assessments, which completed the catastrophe, by driving out all the old members and decreasing the number of the so-called new ones. The company had other incidental misfortunes. Mr. Litchfield allowed his subordinates to build a fine building on State street, which tied up $250,000 of assets, which, if the money had been in bank, might have tided it over. The company did a good, legitimate business in writing policies up to the day it stopped issuing them.

"There is not a pretence that Mr. Litchfield ever did anything inconsistent with the strictest honesty and the best judgment he possessed. The same is equally true as to all of his trusted assistants. The sum and substance of the whole matter is that he failed to collect money enough to make the company a success, and his clientele lacked confidence in the business to make up that amount at once. It has collected and disbursed about $15,000,000 for benefits, with an arrearage of less than half a million. Every living member has already had more than his money's worth, but they either will not or cannot make up the difference to continue the business. Such is the fate of assessment insurance if it becomes decadent."—*N. Y. Insurance Journal.*

READING A LIBRARY TO WRITE A NOVEL.

"The amount of labor that goes to the making of a good historical novel," says the *Ladies' Home Journal*, "is rather deterrent to the writer of fiction who is used to turning out regularly two novels a year. It is so much easier to make over again, with a little imagination, the characters and incidents that one has picked up in the ordinary course of life and travel. Thackeray somewhere tells of the tremendous amount of reading that went into the caldron before 'Esmond' was brewed. And a little while ago an aged librarian related his surprise at the research the great novelist carried on, month after month, in his accumulation of historical details. A whole chapter could be written in the time devoted to the verifying a detail of costume or the turn of an antique phrase. Moreover, the historical novelist realizes that he is taking this tremendous amount of pains for a very few people; that hardly one in a thousand of his readers cares for more than the skill with which he tells his story. But that one is the man who will tell the next generation, with authority, that the book is worth preserving."

—While the American continent is so far advanced in electrical railways it is behind Europe in the pneumatic tube system of transmiting messages and small packages. Some of the large cities of Europe, such as London, Liverpool, Birmingham, Paris, and Berlin, have been provided with pneumatic tubes for transmitting messages for 40 years.

LIVERPOOL TIMBER.

The Liverpool timber circular of Farnworth & Jardine, dated 1st September, says:

"CANADIAN WOODS.—*Pine Timber.*—The import, chiefly of waney, has been large: there is no change in value to report, and the stock, which looks excessive, contains a large cargo just arrived, and which will go direct into consumption. Red pine has not been imported; there is little enquiry, and prices are low. Oak has been imported moderately; the demand has increased, and the stock is too heavy; values are unchanged. Elm is in fair request; the stock is moderate and prices firm. Pine deals have been imported much too freely; the deliveries have been about an average, but values have been difficult to maintain; the stock is most excessive; much difficulty has been experienced in dealing with the large steamer shipments from the quay, and frequently parcels have been yarded that otherwise would probably have gone direct into consumption.

"NEW BRUNSWICK AND NOVA SCOTIA SPRUCE AND PINE DEALS.—Of spruce the import has been enormous, and following on the excessive arrivals of last month has had a serious effect on the market, and sales can now only be made with difficulty; the deliveries, which appear large, include a quantity in the Manchester canal, although not sold, and the already excessive stock of 27,979 standards should therefore be increased to this extent, probably 10,000 standards; values have declined throughout the month, and unless more discretion is shown in forcing forward shipments, even present low rates will be difficult to maintain. Pine deals have been in dull demand.

"BIRCH.—Logs have come forward more freely; the deliveries have been fair, but values continue to decline, and are now extremely low; the stock is too large. Planks have moved off slowly, but there is more enquiry and prices slightly better.

"UNITED STATES OAK.—From Mobile, etc., the import consists of one small parcel, but the demand is limited, stocks are sufficient and prices rule low. *Oak Planks.*—The arrivals of wagon scantling have been moderate and the deliveries fairly satisfactory, still the stock is too heavy, and there is little change in value to report. The total stock amounts to 413,000 cubic feet.

"UNITED STATES STAVES.—The import has not been excessive, but the demand is dull and prices rule low. Stocks are sufficient.

"OREGON AND BRITISH COLUMBIAN PINE.—During the past month the deliveries have been fairly satisfactory, and the stock reduced to a moderate compass. A cargo from Chemainus, B.C., however, has just arrived, which will be sufficient for present requirements. There is no change in value to report.

"SEQUOIA (CALIFORNIAN REDWOOD).—Recent sales have only been in retail quantities, chiefly by dealers, and there is no change in the market.

"PITCH PINE.—The arrivals during the past month have been 5 vessels, 4,021 tons, against 6 vessels, 4,300 tons, during like period last year. Of hewn there has been no import; the consumption has been good, and stocks are considerably reduced. Of sawn the import has been light, and the consumption has been heavy, owing, no doubt, to the excessively low prices ruling; but, for the time of the year, we are left with the moderate stock of a little over half a million feet. Deals and boards have again come forward too freely, and though a considerable quantity has gone into consumption, stocks are still too heavy."

Commercial.

TORONTO MARKETS.

Toronto, Sept. 16, 1897.

BREADSTUFFS.—In sympathy with the decline in wheat, values in breadstuffs are about ten per cent. There is a fair local demand for flour, and several shipments are going forward to the Eastern Provinces. The foreign demand this week is not so strong.

DAIRY PRODUCTS.—The receipts of dairy butter continue quite ample for all local requirements. For good butter prices remain steady, but superior grades have been sold for little money. The export demand for creamery butter is weaker, and merchants say it is difficult to obtain former prices. There is very little trading in cheese. Local requirements are small, and only a hand-to-mouth business is being done. In the country exporters are unwilling to pay the prices asked for cheese by salesmen, and the movement is almost at a standstill. Trade in eggs has been unsettled. The quantity coming forward has been more than sufficient to meet the demand. Western exporters have shipped large quantities of seconds here, which have a bad effect upon trade. Several export shipments are going forward this week, with it is said little chance of successful returns.

DRY GOODS.—The samples of colored cottons for the spring season of 1898 are now at hand, and manufacturers' agents are busy soliciting the trade for orders. The goods are certainly very creditable to the producers, and show many new and pretty designs. Prices are unchanged. In woolen goods there is a fair movement. Several houses have received good orders from Victoria, B.C., for heavy blankets, intended for the gold fields trade. Prices remain depressed in woolens.

GRAIN.—As compared with quotations last week, there has been a decline of 1 to 2c. per bushel in the price of wheat. This is the result of free deliveries in both Canada and the United States. Ontario farmers appear to be confining all their offerings of grain to wheat, and are holding back their stocks of oats, peas, and—where they have any—barley. There is a fair demand for wheat from local millers. Barley is dull. Oats are firm at an advance of 1c. per bush. Peas remain firm, but with a small movement. The statistician of the United States Agricultural Department estimates that "according to Beerbohm's estimate of this year's crop, there is a deficiency of 113,000,000 bushels in European countries as compared with their average product for the six year's 1891-1896—an average which includes the exceptionally small crop of 1891. To make up this deficiency little help is to be expected from India, Argentina, or Australasia for months to come, and in so far as Europe will have to import a larger quantity than usual, she will have to draw it mainly from North America, and especially from the United States, the Canadian contribution being relatively small. Official returns for Ontario and Manitoba give for these two Provinces an aggregate of 51,042,253 bushels. If the Argentine crop shall escape the ravages of locusts it seems likely to turn out unusually well, and from January, 1898, when the bulk of the harvest will be got in in Argentina, that country may have more or less wheat to export, as the latest mail advices represent the crop as being in fine condition and the weather highly favorable."

HARDWARE AND METALS. — Orders from country points are now beginning to improve. Travellers having been in the city during the Fair weeks are again on their different routes, and are meeting with moderate success. It cannot be said that the experiences of the wholesale houses during the Exhibition weeks were satisfactory. The number of visitors was about the same as last year, but orders were for some reason not as numerous nor as large. For the standard general assortment of hardware and tinware there is fairly good demand. The best movement at present is in fall specialties, such as axes, axe handles, cow ties, stove pipes, elbows and the like. In sporting goods there is an exceptionally brisk trade. A number of changes in price lists have been made as the result of an advance in pig lead. The discount on shot is now 12½ per cent. instead of 15 as formerly. Lead pipe discounts have been reduced from 30 to 27½ per cent. White lead (pure) is quoted at $5 50 instead of 5 35 per 100 lbs. A slight advance in iron pipe has taken place, quotations being now $1.87 to 8.75 per 100 feet, covering ¼ in. to 2 in. measurement. The list in stamped wares has been revised, the discount now being 80 and 10 instead of 80. Through the change in prices this alteration will not materially affect values. For galvanized iron there has been a very active demand. Dealers have, in fact, found difficulty in supplying the demand. Trade in wire and cut nails is limited. Only a fair business is being done in barb wire and ordinary wires.

HAY AND STRAW.—Hay is abundant in the market, much of it inferior, because spoiled by rain. There is, in fact, an overplus of dark hay and clover hay, because Gooderham & Worts are not distilling this year and the number of horses in town has declined. The farmers would have abundance of hay to spare and after-grass to feed stocker cattle, if they had them. As it is stockers are being bought up here from Montreal, while hay is being shipped hence to Buffalo. Prices for best hay are $8 to 9·00; inferior, $7 to 7 50; bundled oat straw, $7.50 to 8.00, plenty of it in prospect.

HIDES AND LEATHER.—The situation has lost none of the strength which has characterized it for some time past. Merchants are paying 8½c. to butchers for hides, and are asking 9c. for cured. Green calfskins are quoted at 11c. per lb. For sheepskins 70c. is quoted. Tallow remains about as last; the market is depressed, but rendered tallow shows some signs of improvement. The advices from the Western States reported a firm market, although business latterly has been quiet, tanners holding back to await developments; still, as packers are sold close up to their cure they showed no disposition to hurry business, and prices were quoted unchanged and firm at 11¼ to 11½c. for native steers, 10c. for Texas, 10½c. for butt brands, 9¾c. for Colorados and branded cows, 10½c. for heavy native cows and 11c. for light ditto.

PROVISIONS.—The market is steady. Stocks are light and prices continue firm. Imports from the United States continue, and purchases of dry salted bacon and barrel pork, in the Western States continue. Western killings, according to the *Cincinnati Enquirer*, Sept. 9th, represent a total of 295,000 hogs for the week, compared with 290,000 for the preceding week, and 235,000 for corresponding time last year, making a total of 3,390,000 since March 1st, against 7,730,000 a year ago—an increase of 1,660,000. Prices have been moderately reduced. The market has lost some of its buoyancy. The distribution of product is large, and stocks have been declining, but the supply is so liberal and the outlook so favorable to continued large manufacture that easy markets should not be a surprising feature in either meats or lard.

WOOL.—For the few lots of fleece wool coming to hand dealers are paying 20c. per lb. The market is very quiet and the movement very limited. Pulled wools bring, super, 20c. and combing 19c. per lb. The mills are fairly busy, but the prices of goods are said to be low.

MONTREAL MARKETS.

MONTREAL, Sept. 15th, 1897.

ASHES.—Some little demand has been reported for first quality of pots, but apparently not sufficient to stiffen the market any, and values are easy at $3.05 to 3.15; of seconds there are few offering, and quotations range about $2.80 to 2.85; pearls nominal, at about $4.30 per cental.

CEMENTS AND FIREBRICKS.—Since last writing no further important deals in cements are reported, but there is a moderate jobbing trade being done at steady prices. The advance in England, noted by us last week, is confirmed; local quotations are yet unaltered, but firmly held. We still quote $1.00 to 1.95 for Belgian, and $2.05 to 2.10 for British. Receipts for week ending this day are 2,050 brls. English, and 2,324 brls. Belgian. Receipts of firebricks are 38,300, and prices unchanged.

DAIRY PRODUCTS.—The regular weekly exports of cheese continue to exceed the figures of last year, 57,599 boxes having been shipped last week, as against 32,000 for the corresponding week of 1896, while from New York the figures were only 17,655 boxes. The total local shipments to date foot up to 1,270,744 boxes, as compared with 1,002,333 to same date last year. Of butter, 17,328 packages were shipped last week, nearly 10,000 in excess of the corresponding week last year. The cheese market has not varied materially within the week. Latest cable advices say that the demand for both white and colored is rather quiet, but local figures hold pretty steady at 9¾c. for finest Western; 9½ to 9⅝c. for Townships, and Quebec, 9¼ to 9½c. The demand for butter is rather slower, and values are hardly so well held, 19¼c. being about the extreme for choice creamery; Townships' dairy 14½ to 16½c., and Western, 12 to 13c. The export demand for eggs is hardly as good as it was, and prices on the other side are off a penny a hundred, but local demand is fair at 13 to 13½c. per doz. for strictly fresh.

GROCERIES.—The main interest at the moment seems centred in dried fruits, and in all lines there is decided tendency to advance. In Mediterranean goods this is mainly due to generally smaller crops, and the fact that old stocks are well cleaned up. Notably are scarcity and firmness true of currants, of which there is said to be hardly a barrel in first hands on spot. The Denia market for Valencia raisins is reported still advancing, and cable quotations for off-stalk are up to 18s. The "Avlona," the first direct steamer for this port, is reported filled up, and is just about leaving the above named port for Montreal. Some of the late booked orders coming by her are said to be a full shilling dearer than similar goods on the same vessel. Currants at primary points are momentarily a shade easier, but high prices still prevail. In Sultanas there has been a little fluctuation, but quotations just made figure out a cost laid down in quantity of about 7c. for common and 9c. for finest. The California market continues to show strength in all lines. Prunes have advanced about ¾ of a cent since opening, and large sizes are going to be scarcer than anticipated. First shipments for this market are expected early in October.

METALLIC ROOFING CO., Limited,
1271 King Street West, TORONTO.

Raisins are firmer, and buyers apparently more inclined to fall in with the views of holders. Laid-down cost in car lots is calculated at about 6c. for two-crown, 6¾c. for three-crown, and 7¾c. for four-crown. Dried apricots rule lower than last year, but have advanced a cent since opening, and are considered good property to hold. Peaches are reported scarce and comcomparatively high. Imported candied peels range about the same as last year, wholesale cost being figured, at say, 10c. for orange and lemon, and 16c. for citron. Canned goods show great stiffness; packers are now asking 80c. for peas, 60c. for corn, and are still withholding quotations for tomatoes. Sugar values have undergone no revision since last week. The demand is still a very fair one, and outside markets for raws are reported still strong. Since further moderate orders are reported as being placed for Austrian refined beet sugars, which are said to show better quality than the German samples that have been shown, and which will cost about $3.85 to 3.90 laid down per cental. The tea market continues to show all the firmness last noted, and it is said nothing desirable in medium grade Japans can be had under 15c. per pound.

Hides and Tallow.—In these lines of trade there has been no apparent change for the week. Dealers are buying green hides on the basis of 8c. per lb. for No. 1, and selling cured to tanners at 9c. Receipts are moderate, and the demand about absorbs the supply. The Chicago market is reported steady at 10c. for No. 1 buff hides. Calfskins are unchanged at 8 and 6c. per lb.; lambskins, 50c. each. Tallow on spot is dull as ever, but some improvement is reported in Chicago, where sales are reported at 4c. per lb. with expectation of further advance, which may keep the market here a trifle.

Hops.—Comparatively little has been done yet in new hops here this season, and the demand is reported very inactive. Only moderate receipts of early varieties are reported as yet, and the bulk of the crop has still to be marketed. About 15c. is quoted as the outside price for new; yearlings are hard to sell, and prices are altogether nominal at 5 to 7c., old olds are not wanted.

Leather.—It is claimed some further large lots of No. 2 Spanish B.A. sole have been sold at 22c., and that prices are likely to develop some further advance next month. Some tanners seem also disposed to put up black leathers, and some local dealers' stocks of pebbled, grain, etc., have been pretty well bought up at quotations. European manufacturers of kid and dongola leathers are reported large buyers of raw goat skins, which are advancing materially, and local manufacturers are asking more for goods in this line. We quote:—Spanish sole B.A. No. 1, 23c.; do. No. 2, 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 25 to 27c.; No. 2 do., 21 to 23c.; common, 20 to 21c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 21 to 24c.; Quebec do., 16 to 17c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—Prices in these lines are steadily held, especially late advances. Lead is even firmer than last noted, $3.90 being asked for small lots. Copper is firmer if anything. The report that domestic bar iron had been sold as low as $1.25 is distinctly denied; $1.30 is said to be the present lowest figure, though it is understood a round lot was put through a short while ago at $1.27½. In pig iron there has been no recent change; a considerable lot of No. 2 Siemens, that has been held here some time, is being offered now at $15, and some moderate sales are reported at that figure. This furnace has now been out of blast a year, and the company has no No. 1 to offer. We quote:—Summerlee pig iron, $17 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No. 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $16.00, ex-store; Siemens pig No. 1, none; No 2 Siemens, $15; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6.00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do., I.X., $3.90 to 4.00; P. D. Crown, I.C., $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2.90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2.45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 75 to 3.90; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 8½ to 9c.

Oils, Paints and Glass.—Leads have been subjected to a further advance of 12½c. all around, and the market for dry white lead in England is very strong, the cable quotation being up to £17 10s., a high figure. Turpentine is again a little firmer, and linseed not unlikely to advance. In other lines there is nothing new. We quote:—Turpentine, one to four barrels, 45c.; five to nine barrels., 44c., net thirty days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels.,

Not 1 Business Man in 33

leaves his family anywhere near money enough to continue the comforts he has educated them to need and expect. This suggests immediate action on their part, in the direction of Life Insurance.

The Commercial Policy
OF THE

North American Life Assurance Co.

furnishes safe and legitimate insurance at a low cost, thereby enabling business men to build up an estate for their dependents, which otherwise might be left undone.

For full particulars address...

WOOL.—The late moderate demand has fallen off again, and there is very little doing at the moment. The market is, however, very bare of stock, it being stated that there is under 300 bales of Cape wools on spot, very little B.A., and no Natal or Australian. Capes are very firmly held at 15 to 17c. per lb., with very little at the inside figure, and B.A. at 30 to 35c. Quotations at the Cape are very stiff, and a cargo for this market is just about leaving there, amounting to some 1,000 or 1,200 bales. Of domestics the market is also bare.

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

TEN DOLLARS A MINUTE!

This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the

METROPOLITAN
Life Insurance Co. of New York

Assets, ... $25,592,003 78

The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.

Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,
32 Church Street, Toronto, Ont.

A. B. POWELL,

CANADIANS AND THE LUMBER TARIFF.

The Mississippi Valley *Lumberman* says: "Three weeks' experience with a $2 tariff on lumber is making the Canadian lumber men feel blue. Some of them are losing their heads and demanding that the Dominion Government do all sorts of ridiculous and impossible things. Some want their Government to retaliate by imposing an export duty on saw logs. Any such action on the part of the Canadian Government would, of course, be followed by retaliatory action on this side which would far more than offset Canadian reprisals. It would double the duty on rough lumber, and might call down interference with the profitable business of converting logs from the State of Maine into lumber at St. John, N.B. It is also hinted at Washington that it might also secure interference of some kind with the supply of Canadian sawmills at Rat Portage with logs from the Minnesota side of the Rainy River and its tributaries. There are still other ways in which the United States might retaliate, such as by abolishing the bonding privilege enjoyed by Canadian railways in this country, and bringing about the exclusion of Canadian fish from the American market. There is little danger of an order-in-Council being issued requiring all logs cut in Canada to be sawed in Canadian mills, as it would put an end to any further demand for Canadian timber limits. The best thing our neighbors across the way can do in regard to this lumber tariff business is to grin and bear it, as the American lumber men have been doing during the past three years of free lumber."

LIFE INSURANCE AND HEREDITARY TRAITS.

We referred some time ago to a paper read by Dr. Leslie Ogilvie before the Actuarial Society of Edinburgh. This, together with another paper read before the Insurance Institute of Ireland, has been published as a pamphlet. Dr. Ogilvie very rightly insists on the value of general observations of the proposer without decrying the supreme value of a careful physical examination. The case, he urges, should be investigated from five points of view: (1) The personal history; (2) the family history; (3) the physical condition as ascertained by careful medical examination; (4) the personal appearance; and (5) the environment, including habits and mode of life. In order to record rapidly the salient features of insurance cases, Dr. Ogilvie has constructed a table in which he assigns certain values to the different headings. Thus personal history, family history, and personal appearance are each credited with 20 per cent., to physical examination 30 per cent. is assigned, and to environment 10 per cent. Exception might certainly be taken to some of these figures; for instance, to environment, including as it does, according to Dr. Ogilvie, habits, should be allotted a greater influence, as one of the most important factors in life insurance is the question of temperance. With some modification, however, such a table will be useful in correcting a hasty judgment by bringing into review the various circumstances which bear upon life insurance. In discussing the influence of heredity on life insurance, Dr. Ogilvie asks the crucial question: "Do we, or do we not, inherit enfeebled or robust constitutions from our ancestors?" To this he answers emphatically yes, and as a consequence insists upon the importance of family history in life assurance, giving it an equal value with personal history. In regard to personal history, Dr. Ogilvie makes some useful remarks bearing upon the value to be attached to the various manifestations of gout. In speaking of cases in which rejection by an assurance office has been followed by long life, he points out that the very rejection may have been one of the elements which determined that careful life which conduces to longevity. He lays stress on the importance of ascertaining the cause of the structural alteration in the valve giving rise to a murmur, in view of the fact that a murmur due to degenerative changes in the valve is of much graver import than one originating from acute disease. With regard to the influence of syphilis on life assurance, Dr. Ogilvie advises that those should be declined who show degeneration of any kind, although no active symptom of syphilis was present; he would refuse or postpone those who had recently suffered from malaria or gout, or who showed any suspicion of alcoholism. If there were signs of the active disease the life might be postponed, but given a good family history and an otherwise good personal record, and evidence that the applicant had been under careful treatment for a year or more, and that there had been no signs of the malady for many months, Dr. Ogilvie advises a temporary addition of five or seven years, provided the individual has the appearance of a man likely to lead a careful life. After efficient treatment lasting two years off and on, and an interval of a year without treatment or symptoms, the author is of opinion that a proposal at the ordinary rate might be accepted.—*British Medical Journal.*

WOOD IS MADE FIREPROOF.

The London *News* gives the following account of a test recently made at Hurlingham by the British Non-flammable Wood Company to demonstrate the security against fire of buildings constructed of timber treated by its process:

The test was conducted on much the same lines as the trial which took place at Millbank in May before the officials of her Majesty's office of works, and which was witnessed by the Prince of Wales. For the purpose of the experiment two buildings, about eleven feet square and thirty feet in height, had been set up near the ornamental water. They were similar in all respects, except that one was made of "treated" timber and the other of ordinary timber. Each was furnished with a chimney for the purpose of creating a strong draught and facilitating combustion. Outside the little houses on the windward side, was piled firewood and shavings, which were set on fire simultaneously. In five minutes the building of ordinary timber was well alight, and in about half an hour it had been reduced to ashes. But the other structure remained intact, save for the charring of the woodwork on the side exposed to the direct action of the flames. A further test had meanwhile been applied by igniting a pile of shavings and faggots inside, but again the effect was merely to char the wood, which did not break into flame. Indeed, a box made of the "treated" wood which had been placed in the midst of the ignited firewood, was afterwards drawn out practically uninjured, and the souvenirs of the occasion which it contained were distributed to the spectators. The experiment was witnesed by the Duke of Cambridge, Lord Charles Beresford, and a numerous and fashionable company.

THE VESSEL, NOT THE UNDERWRITER, PAYS THE LOSS.

In a letter to Capt. Geo. P. McKay, of the Lake Carriers' Association, Geo. L. McCurdy, of Chicago, writes very interestingly of recent lake accidents and their relation to the principle of insurance "that after all it is the vessel that pays the loss." We quote from the *Marine Review:*

"In connection with our correspondence on various subjects pertaining to aids to navigation, I have thought of writing to you about the results of our investigations this season, for I believe that in them we have found some of the causes of disasters, and that many of these disasters could have been prevented seems to be a foregone conclusion. I cite for example the disaster to the steamer 'Britannic,' which ran into the gates of one of the locks in the Welland canal. I wrote to Capt. Alvin Neal, the owner, and asked him if the experience arising out of this disaster suggested to him an idea how to prevent a repetition. Mr. Neal investigated this matter and found, to his surprise, that neither the master nor the engineer of the 'Britannic' had a copy of the rules of the Canadian Government governing navigation of the Canadian canals. Section 5 of these rules reads as follows: 'It shall be the duty of all masters or persons in charge of any steamboat or other vessels, or of any raft or barge in approaching any lock or bridge, to ascertain for themselves by careful observation, whether the lock or bridge is prepared and ready to receive them or allow them to pass through, and to be careful to stop the speed of any such steamboat or other vessel or raft with lines and not with the engine wheel.' In the case of the 'Britannic' steam was used to stop the progress of the vessel, and we find that just because steam was used we have to pay something like $4,000 as a result of this steamer running into the gates. Capt. Neal feels that if the master had understood the rules the disaster would not have occurred. This, then, is one of those accidents that could have been prevented by seeing that each master is furnished with a copy of the rules, or of the sections which more directly apply to navigation in the locks.

"Can you wonder, then, that we feel somewhat exercised at this waste of money, in which it must be conceded that the owners of the lake vessels have fully as much interest as the underwriters, for we must start with this idea firmly fixed in our minds, that the underwriters are simply the custodians of a fund created by the vessel owners, who pay to the companies premiums from which alone may be expected the necessary funds with which to pay for disasters. If these funds are exceeded, one can see the result. It has been repeated year after year in the history of the lake marine; the rates of premiums are increased, and the form of policy is made less liberal, with the natural sequence that the owners are dissatisfied, as the higher rates have usually come in what are called hard times for the vessels. It was with an idea to firmly establish a system of low rates and liberal form of policy that we introduced our syndicate, feeling that by an intelligent supervision of the losses, the causes of disasters, menaces to navigation, drainages and leakages, which have so vexed this inland marine business, that we could continuously offer to the lake owners what they need—good indemnity at cheap rates. This will account, then, for my diligence in trying to learn first why these accidents occur, secondly to try to have adopted such ideas as may be approved after being well considered, to minimize the chance of loss.

"You probably noted the announcement that we concluded, upon investigation of this Welland canal accident, to furnish all captains with copies of the principal sections of rules relating to the navigation of the canal. This will be done by a delivery service at Port Colborne and Port Dalhousie. We are proceeding in matters of this kind not with the idea of dictating to vessel owners or vessel masters. On the contrary, we are hoping that our course will be commended if it results in a reduction of losses and the saving of so much out of the premium fund, which, as I have already said, is after all created by the vessels themselves. The same idea prompted our suggestion regarding the maintenance of a signal service at Johnson's Point, Sault River, which we propose to establish at our own expense if satisfactory arrangements can be made with the Government officials and vessel owners."

—The city of Duluth is in such hard financial straits that it has had to close up five of the fire stations and dismiss a third of its police force. Commenting on this, the Montreal *Gazette* says: There are places worse off than Montreal. It has only, so far, had to stop mending its streets.

DECISIONS IN COMMERCIAL LAW.

Re CONSUMERS' GAS COMPANY.—Gas pipes laid under the streets of a city, which are the property of a private corporation, are real estate within the meaning of the "Ontario Assessment Act of 1892," and liable to assessment as such, as they do not fall within the exemptions mentioned in the sixth section of the Act, according to the Supreme Court of Canada. By the appellants act of incorporation power was conferred upon them "to purchase, take and hold lands, tenements and other real property for the purposes of the said company, and for the erection, and construction and convenient use of the gas works of the company"; and, further, power was conferred by the thirteenth clause "to break, dig and trench so much and so many of the streets, squares and public places of the said city of Toronto as may at any time be necessary for the laying down the mains and pipes to conduct the gas from the works of the said company to the consumers thereof, or for taking up, renewing, altering or repairing the same when the said company shall deem it expedient." Held by the Supreme Court of Canada that these enactments operated as a legislative grant to the company of so much of the land of the said streets, squares and public places of the city, and below the surface, that it might be found necessary to be taken and held for the purposes of the company and for the convenient use of the gas works, and when the openings are made at the places designated by the city surveyor, as provided in said charter, and they are placed there, the soil they occupy is the land taken and held by the company under the provisions of the said Act of incorporation. Also, that the proper method of assessment of the pipes so laid and fixed in the soil of the streets and public places in a city ought to be as in the case of real estate and land generally, and separately in the respective wards of the city in which they may be actually laid.

CITY OF TORONTO V. TORONTO RAILWAY CO.—It was urged that the question to be determined, viz., the liability of the Toronto Railway Co. to an assessment upon their rails, poles and wires, was *res adjudicata*; it having been decided in an appeal from the assessment in question, heard before the Board of County Judges in July last, that the Railway Company are not liable to such assessment. McDougall, J., says; "It is true that this is the effect of the judgment pronounced by the judges composing the board; but the question has been already decided by the same two judges in an appeal heard in 1896. But since that date, a judgment has been rendered in the Supreme Court of Canada, in the case of the Consumers' Gas Company *v.* Toronto (May 1st, 1897, not yet reported) affirming the liability of the Gas Company to assessment for their mains; and the Chief Justice of the Court, besides so holding, went on to point out that there was no distinction between gas mains and street rails, and stated expressly that the case of Fleming *v.* Street Railway Company, decided by the Court of Appeal, must now be held to have been wrongly decided. The appeal will be allowed, and the original assessment made by the Assessment Department against the rails, poles and wires of the Toronto Railway Company, be restored to the roll.

A CARPET manufacturer at Markham, Archibald Campbell, has failed. In March last he tried to effect a compromise with creditors, but was unsuccessful in doing so, and now the sheriff is in possession of the stock.

Mercantile Summary.

G. A. Whitcomb, a small storekeeper at Oak Point, N.B., has had to assign, owing about $1,100. He was employed as a steward on a St. John River steamboat, his wife looking after the business.

The demand of assignment noted in a recent issue as having been made upon the firm of H. B. Muir & Co., woolen jobbers, Montreal, has been withdrawn, the matter on which said demand was made having been satisfactorily arranged.

In 1880 C. Langford opened a carriage manufactory at Wiarton. In May last he effected a settlement with creditors at 25 cents on the dollar, cash, but had to borrow the money to do so. Being unable to continue further, he has assigned.——Lewis Hoppins, grocer, Deseronto, and T. M. Shoebottom & Co., grocers, London, have assigned.

A somewhat important dealer in general merchandise at Doucet's Landing, Que., Jos. Bourgeois, has become involved, and demands of assignment having been made upon him by two Montreal houses, he has consented to make an abandonment of his estate. He did an active, and it was thought profitable business, for some time, but began to spread out a few years ago, becoming interested in a steamboat, in lumbering, etc., and in March last obtained an extension, which, however, has not apparently afforded him the relief required.

The Quebec boot and shoe manufacturing firm of G. Bresse & Co., lately reported as seeking a general arrangement with creditors at 30 cents on the dollar, have been unable to get the signatures of all creditors, and have had to assign.——Morin & Frere, a small tanning firm, in Quebec, who are interested in Bresse's failure to the extent of some $1,500, and who have also made other recent losses, are reported to be trying to arrange a compromise at 10 cents on the dollar.——Mrs. Labrecque, milliner, Quebec, is reported to have settled with creditors at 60 cents on the dollar.

THE INSOLVENCY AND LIQUIDATION
DEPARTMENT OF THE

Western Loan and Trust Company, Limited,

S OPERATED BY

W. Barclay Stephens,

Manager of the Company.

Under the laws of the Province of Quebec the Company cannot be appointed directly to trusts, such as assignees, etc. Therefore, Mr. Stephens will act on behalf of the Company in all such cases, the Company assuming all responsibility and reliability in regard to any estate which may be placed in his hands.

Address communications to

W. BARCLAY STEPHENS,
13 St. Sacrament Street, Montreal, Que.

THE CANADIAN PACIFIC RAILWAY COMPANY

The undermentioned dividends have been declared for the half-year ended June 30th, 1897. On the Preference Stock two per cent. and on the Common Stock one and a half per cent.

The Common Stock Transfer Books will close in London at 3 p.m. on Friday, 27th August, and in Montreal and New York on Thursday, 9th September. All books will be re-opened on Saturday, 2nd October.

Warrants for the Common Stock dividend will be mailed on or about 1st October to shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock Dividend will be paid on Friday, 1st October to shareholders of record at the closing of the books at the Company's London office, 1 Queen Victoria Street, London, E.C.

By order of the Board.

CHARLES DRINKWATER,
Secretary.

ontreal, 9th August, 1897.

The Central Canada Fair opened at Ottawa on Monday last, with all available space taken and an increase of exhibits in nearly every department. The weather was cold, but has since improved, and there are fair financial prospects for the enterprise.

The C.P.R. and G.T.R. are said to have decided to reduce the winter rates for freight from Montreal to Kingston this year. This question was to have come before the board of trade, as it was considered the former rates were too high. The reduction being granted without a request from that body, is all the more appreciated.

A winding-up order has been granted by the Court in the matter of the Non-Magnetic Asbestos Co., Limited, of Point au Chene and Montreal, and a meeting of creditors is called for the 28th inst., to appoint a liquidator. Mr. W. T. Costigan, recently insolvent, was the chief promoter of this company, incorporated about a year ago, with a capital of $15,000.

What may be termed an International Patent Convention, is to be held in Brussels, in December next. United States Patent Commissioner Butterworth and Assistant Commissioner Greely, are framing amendments to be offered to the treaty existing among the leading nations of the world, "for the protection of industrial property." The United States intends to secure, if possible, certain modifications of the present agreement.

The St. Thomas city council, at a special meeting held last week, decided to submit two by-laws to the vote of the ratepayers on Monday, October 11. One by-law is to raise $10,000 to purchase the Ellison property for a city hall site, and hold it until such time as the city can afford to erect a handsome structure. The other by-law is to raise $40,000 to purchase the Idsardi property, corner of Talbot and George streets, and erect a $30,000 city hall thereon.

The lumber mills of the Hull Lumber Company were burned to the ground on the 19th inst. The loss will be somewhere in the vicinity of $100,000, partly covered by insurance. The mills are known as Hurdman's old mills. They are now owned by a company, of which the principal owners are Messrs. Buell, Orr, White, Hurdman and Avery. The Ottawa fire brigade gave valuable assistance to the Hull brigade in confining the fire to the mills where it started. The cause of the fire is not known.

The Master in Ordinary has confirmed Mr. E. R. C. Clarkson as liquidator for the estate of the John Eaton Company, of Toronto. The Master gave his decision on Tuesday last. He was very severe upon the bitterness shown in this matter, and the appeals made to creditors and the public through circulars and newspapers. He considers that "such a newspaper war while the case was *sub judice* was improper, if not a contempt of court." Continuing, he said: "Certain evidence warrants me disapproving in the strongest language allowable to judicial utterances the attempted bargaining about the court appointments of liquidator and solicitor." Adducing English cases the Master decided to follow precedents which marked out the person appointed interim liquidator as the likeliest person for the permanent position. He, therefore, had regard to the opinion of Judge Robertson in appointing Mr. Clarkson *ad interim*, and confirmed that gentleman in the position. Opposing counsel asked for a stay of proceedings, but this was not granted. Mr. Clarkson refused to accept costs awarded him, not desiring to burden the estate.

Self Proving Accounting

A system of accounts, self-proving in every particular, applicable to any business, large or small; is described and illustrated in complete detail in the Manual of the Self-Proving Accounting System. By the methods it provides all the vital facts of the business are gathered into the general ledger, so that it becomes a **perpetual balance sheet,** always up-to-date and **available at all times.** Tiresome digging after buried facts in order to show resources and liabilities or profit or loss, is entirely done away with. The daily labor of keeping the books is materially lessened. Periodic inventorying and closing the books, and the terrors of monthly trial balances, are entirely obviated. Any bookkeeper after reading the Manual may re-arrange his books on the principles outlined. Cloth, 328 pages, profusely illustrated. Price **$5.00,** carriage paid. Descriptive circulars on application.

The Gurney Foundry Co., Limited, TORONTO.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

The Montreal *Gazette* says that a high official of the company denies that the Dominion Cotton Mills Company intends "going into the retail trade. . . The company will confine itself to the wholesale business only."

A Michigan bank failure was announced on Saturday last. The First National Bank of Benton Harbor did not open for business that day. About $90,000 is due depositors, and it generally believed that 75 per cent. will be about as much as can be realized.

The sturgeon fishing in British Columbia has been very good in the river for the past few weeks, and some of the nets have had big hauls. The average size of those taken also continues very satisfactory, and nearly every day several weighing 600 to 700 lbs. each are brought to dealers.

The Victoria *Times* says that Victoria, B.C., is certainly one of the great shipping ports in Canada. "During the month of August, no less than 105 steam vessels, principally ocean and large coast-going craft, docked at the outer wharf, to say nothing of the large number coming to inner docks."

The Rossland Board of Trade has been reorganized. Arrangements are being made by which the board will take an active part in advancing the interests of Rossland and the surrounding districts. There is said to be a revival of business there. Preparations are being made for resumption of work on a large number of properties. The output of ore is already increasing.

The representative of an English refining company is in Montreal with a view of building for his company a full and complete refinery for the purpose of treating linseed oils by their process. It is said that 84 per cent. of the total cost of imported English and 75 per cent. of American oils consumed in Canada is sent out of the country. This company, it is said, has refineries at Buffalo, N.Y.; Chicago, Ill.; London, Eng.

A new manager has been appointed by the Dominion Cotton Mills Company, Mr. James Jackson, who has been its manager for some years, having resigned. His place has been filled by the appointment of Mr. C. R. Whitehead. Mr. Whitehead has been manager of the Montmorency Cotton Mills. The mills in future are to be under the joint management of Mr. Whitehead and Mr. Leslie Craig, the latter gentleman looking after the office, the manufacturing being attended to by the new manager.

Customs collections at Nelson, Kaslo, Rossland, Trail, Nakusp and Waneta, a group of British Columbia mining towns in Kootenay and Slocan, amounted for August to about $31,000. The figures are: Nelson, $10,086; Kaslo, $6,684; Rossland, $6,339; Trail, $3,298; Nakusp, $3,116; Waneta, $1,450. Exports for the month were as follows: The mine, $675,189, including 4,353 tons of ore and 717 tons of matte; the forest, $2,066: animals, $493; manufactures, $5,796; total, $683,544.

In the August letter of our Australian correspondent, which left Sydney Aug. 16th and reached Vancouver Sept. 11th, is a passage which we commend to the notice of Canadian shippers of dairy produce. Describing the steamer "Warrimoo" and her cargo on the last trip from Vancouver to Sydney, he says: "In the cargo of the 'Warrimoo' was a shipment of butter from the State of New York. Part of it was creamery and part factory. It was shipped in refrigerator cars by C.P.R., transferred at night to the cool chambers of the ship, and came over in first-class condition. The creamery is pronounced to be good, the factory not quite up to expectations. It is selling at from 20 to 25 cents per pound to the trade, which is about four cents below local make. The importers expect to do fairly well out of it. Where is Canada in this business?"

Thos. W. Cole succeeded Cole & Cook in October, 1894, in the painting and wall-paper business in Stratford. Mr. Cole proved to be easy going, and has never pushed his business. He has besides almost always been slow pay. This week he makes an assignment.

There are two assignments of traders at Niagara Falls. One of these is made by John E. Alford, retail grocer, who has been in business a little more than one year. The other is that of W. H. Behrens, who has kept the cosy Rosli House since 1894, but was not able to save money.——An offer of compromise has been made by W. E. Sittlington & Co., dry goods dealers at Sarnia. Mr. S. is the sole owner, and succeeded Kirby Bros. early in 1895. He owes about $16,000 and has a stock of $12,000.——Geo. Gregory, sr., sawmill owner, Midland, has assigned.

The value of assessed property in the British Columbia town of Rossland is placed by the assessor at a million and a half dollars ($1,503,561). It is thus divided:

ORIGINAL TOWNSITE.		
Value of land	$697,867	
Value of improvements	320,750	
RAILROAD ADDITION.		
Value of land	$316,321	
Value of improvements	118,623	
Total, lands		$1,014,188
Total, improvements		439,373
Mines (estimated)		50,000
		$1,503,561

Cork-cutting is one of the few of Spain's industries that apparently remains unaffected by wars, revolutions, Carlist plots, and feeble finances. "The largest output is from the province of Gerona, along the upper borders of which the Pyrenees range. The factories in this district alone employ 10,000 persons, one in Palamos having over 500 employees. But this establishment is overshadowed by a house in Cadiz, which handles cork from tree to consumer, and employes a total of 2,000 people. This firm is also engaged in the trade on the northern coast of Africa in the neighborhood of the Strait of Gibraltar. The value of the Spanish cork trade is upward of $10,000,000 a year."

According to a recent letter from Woodstock, the Anderson Furniture Company of that place, which makes a great variety of furniture, is actively busy. We understand that considerable quantities of their furniture find a market in Great Britain, and that they ship likewise to Australia, New Zealand and South America. With respect to the company's trade with the antipodes, the general manager informs our correspondent, that the trade with the colonies is highly satisfactory. Among other items respecting manufactures sent us from Woodstock, we learn that the Karn Organ and Piano Co., which lately bought out Warren & Son, of Toronto, and employs 250 hands, is building an addition 50 by 70 feet to their already large factory, and adding convenient offices. Another actively employed factory is that of the Bain Wagon Manufacturing Co., to which new departments and offices have been added. The firm of Hay & Co., have built a large brick building on the Norwich Road, and are employing about 100 hands in making high-class furniture.

Mercantile Summary.

A letter from Sarnia describes the new flouring mill of James King, whose former mill was burnt about a year ago. The new mill is on the old site, near Mr. King's own wharf, on the River St. Clair. It is built four stories high, of white brick, and has the most approved machinery, including a good bolting system, which Mr. King says, after 28 years' experience, is the most efficient that he has ever used. The mill appears to have abundant orders, for it is running night and day. Another Sarnia enterprise noticed is that of the Bushnell Co., Limited, which is erecting extensive buildings lower down on the River St. Clair. A large number of hands is to be employed there as soon as the various buildings are erected and fitted for the manufacturing of various grades of oil from the Petrolia oil wells. This is intended to be, we understand, the largest concern of the kind in the Dominion.

In the town of Woodstock, N.B., the commercial traveller is called upon to pay a license, to the injury of local retail and Canadian wholesale interests. The matter came up before a meeting of the Board of Trade on Saturday. H. Paxter Baird moved a resolution that the board express disapproval of the tax imposed upon commercial travellers representing wholesale houses, and request the Town Council to consider the advisability of doing away with it. Ex-Mayors Drysdale, Saunders and Mayor Hay all opposed the resolution, contending that the commercial traveller was rather a nuisance than a convenience, and advising the merchants of the place to get in the way of going themselves to the wholesale centres and buying. James Carr, a large operator in lumber and bark, seconded Baird's resolution. His argument was that the tax was imposed when other towns in the province did the same thing. All other towns had abolished the license, but Woodstock, and he thought this of itself was evidence that the tax was not regarded as in the interests of the consuming public. Consideration of the subject was postponed till October.

Upon the demand of his mother, an assignment has been made by C. W. Henderson, dealer in electrical supplies, Montreal. The direct liabilities are $8,327, about half of which is due to his mother; indirect liabilities $2,186.——A family wine and liquor business carried on under the style of the Bodega Wine Co., at Montreal, by C. E. Dawson, has been closed up by the assignee. Sundry creditors are interested to the extent of about $3,000.——O. Themens, grocer, Montreal, lately reported in trouble, is asking an extension spread over twelve months.—H. Pepin, baker, of the same city, has compromised liabilities of $2,000 at 25 cents.——J. P. Lanoie, a dry goods retailer in the St. Louis suburbs has assigned, owing about $7,000. He was assisted to start business in 1893 by his father, but was burned out in 1895, when he compromised at 60 cents.——A Montreal contractor, Etienne Robert, has gone into insolvency; he shows nominal assets of $7,970 to pay liabilities of $8,690.——Two small grocers of the same city, have also assigned, A. J. Toupin, owing $1,500, and J. A. Dupras, owing about $1,000.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

Tenders for the purchase of $7,000 worth of general debentures of Collingwood are advertised.

In 1888 R. J. Wilkinson, dealer in dry goods, shoes, etc., at Essex Centre, assigned. In the following year he moved to Windsor, and opened a store in his wife's name. Since then her stock has been mortgaged to his principal creditor, and the mortgage is being foreclosed.

The dry goods business of T. A. Mara at Hespeler was bought in 1893 by A. G. Lang, who paid $400 cash, securing the balance by giving a chattel mortgage of $3,000. Although this sum has been considerably reduced, Lang has been obliged to assign. Assets and liabilities are about $2,100.

A special committee is at work revising the charter of the city of Montreal, and it has decided to appoint two outside lawyers to cooperate with the city attorneys in revising the charter. A report from the Charter Committee was to be submitted for the consideration of the members of council at a special meeting last Thursday.

The St. John's, Que., *News*, which was established in 1848 by the late W. W. Smith, will celebrate its golden jubilee next New Year's Day. To commemorate this and keep pace with its growing business a Campbell "Century" two-revolution press has been ordered and the plant will be put into shape to accommodate a growing business.

The New York agents of the Bank of Montreal received on Monday last from the Cariboo Hydrauling Mining Companies of British Columbia a cone of gold worth $61,987 and weighing 3,606 ounces. It is to be delivered to the Assay office for treatment. This is the second shipment from the company's mines this summer, the first having been a clean up of $70,921 in July, as we stated at the time.

Residents of St. Henri, near Montreal, have voted on the by-law providing for a $20,000 loan by that municipality to the Moseley Shoe Leather Company, in consideration of the establishment of a tannery in the city. The vote stood 125 for the passage of the measure and 25 against. The assessed property valuation of the voters was in favor of the by-law by $300,000 excess.

When the Children's Endowment Association, of Minnesota, went into the receiver's hands in 1894 the assets were inventoried at $150,153. Since then Receiver Lane has collected over $147,000, and made two dividends to members of twenty per cent. each, amounting to $100,000 on claims filed for $250,000. There remains about $40,000 in the receiver's hands, with receiver's and legal expenses yet to be paid.

The sheriff is in possession of the stationery stock of A. W. Biddell & Co., of Vancouver, B.C., on a rent claim of $630. The firm have been slow in meeting their bills for some time past.——L. Nadleman, general dealer at Steveston, has been carrying too large a stock and granting credits too freely. This has led to his assignment.——The Milwaukee Brewing Company, Ltd., of Victoria, is in difficulty, and the sheriff has possession. Several changes have taken place both in style and ownership, and they have never been successful.

The dinner to be given Sir Wilfrid Laurier by the Toronto Board of Trade is creating great interest, and the decision to substitute this form of welcome for one having a strictly party meaning is generally welcomed. The Premier and Lady Laurier visit Toronto as the guests of the board, and the city council joins heartily in the reception. Seats for 425 diners, and 600 gallery seats for ladies and men, have been arranged for on the night of the dinner, October 6th. Tickets for the dining tables, purchasable only by members of the board at $3.50, will be on sale upon Tuesday, at 10 a.m., at the secretary's office, and if any are unsold next day, members may purchase them for their friends. The cost of gallery tickets is fifty cents each for ladies, and one dollar each for gentlemen.

A case in which John Dill, a Toronto customer, sued the Dominion Bank for some $16,000, deposits and interest, has been before the Superior Court for some days. The bank claimed that Dill had withdrawn by cheque some $10,000 of the money, but this he denied. There had been grave irregularities at the Esther street branch of the bank, where the deposits were made, and its manager dismissed therefore the directors desired to effect an equitable settlement. So they made an offer to treat the account as a 4 per cent. savings bank account, interest to be computed half-yearly until 1892 and yearly afterwards; the bank to get credit for or deduct the two cheques, one of $3,000 and one of $1,000, but not to deduct the cheque for $5,000, and to allow besides $400. Or the bank would pay the sum of $12,000. The plaintiff to be entitled to elect between the sum to be ascertained by computation and the $12,000 This settlement was accepted and the case withdrawn from court on Tuesday last.

A convention of the Dominion Cigar Manufacturers' Association was held in Montreal this week. The association took action in connection with the passage of an insolvency law, in the shape of the following resolution, which was carried unanimously: "The Dominion Cigar Manufacturers' Association, now in session, wish to place on record their strong and unanimous conviction of the necessity of a Dominion insolvency law; and would urge the Federal Government to enact such legislation at the next session of Parliament." The following gentlemen were elected officers of the association for the ensuing year: Mr. M. E. Davis, honorary president; Mr. J. Bruce Payne, president; Mr. Otto R. Brener, first vice-president; Mr. Michael Hirsch, second vice-president; Mr. W. G. Reid, third vice-president; Mr. R. D. McDonald, treasurer; Mr. G. A. McGowan, secretary; Messrs. L. O. Grothe, J. M. Fortier, George Milligan, executive committee. After the association had adjourned the members enjoyed a drive around the mountain, visiting various points of interest in the city.

COLLINGWOOD DEBENTURES

Tenders are invited for the purchase of $7,000 Debentures Town of Collingwood, as follows:

First—$2,000 under authority of 47 Vic., Cap. 49, Ont. Stat., repayable Dec. 1, 1916.

Second—$5,000 under authority of 54 Vic., Cap. 65, Ont. Stat., repayable Dec. 1, 1919.

All to bear date Dec. 1st, 1897, interest at 6 per cent. payable half-yearly, on 1st June and December, at Bank of Commerce, Collingwood.

Successful tenderer to pay at par in Collingwood, and cost of forwarding Debentures.

Whole to be issued in seven Debentures of $1,000 each.

Tenders will be received up to November 4, 1897.

A. D. KNIGHT,
Town Treasurer.

Collingwood, Sept. 22, 1897.

Mercantile Summarv.

A BONUS by-law granting $35,000 to the Montreal Transportation Company for the erection of an elevator has been carried in Kingston.

ARGENTINA is not pleased with the tariff policy of the United States, and in a revision of the tariff the lesser republic strikes back at the larger one. The new Argentine tariff will increase the duty 50 per cent. on goods not now on the free list and 15 per cent. on the free list products.

THREE years ago and more, Gordon and McIntyre, dry goods dealers, Wingham, dissolved partnership and divided their stock. At that time each was supposed to have a surplus of more than $2,000. Now Gilbert McIntyre is in difficulty, and assigns to his principal creditor, who is preparing a statement.

ASSIGNMENTS in Ontario include those of John Small, shoemaker, and Archibald Irvine, liveryman, at Grand Valley; Wright G. Smith, harnessmaker, Woodslee; E. P. Watson, butcher, Newmarket, W. J. Quesnel, hotel-keeper, Mattawa; W. T. Moore, shoemaker, Woodville; Daniel S. McLellan, grocer, Erin.

SOME of the real estate belonging to the Banque du Peuple was to have been sold last Monday, but it was all withdrawn to be sold in detail on the premises, except a farm at Cote Visitation. This property, of 32 arpents, with a stone building, went to Messrs. J. O. Villeneuve and Roy for $30,000.

WORD came on Wednesday of the demoralization of freight rates by rail and lake from Buffalo to St. Paul. First, the Wisconsin Central Road and the Great Lakes Steamship Company reduced the rates from Buffalo to St. Paul, 60 per cent. Then the Northern Steamship Company made the same rate. The Anchor Line, Union Transit Company, Western Transit Company and the Soo Line managers were to meet yesterday to consider whether the cut should be met.

THE Fire Underwriters' Association held its meeting in Quebec city on Wednesday and Thursday of this week. There was a very full attendance of general managers of fire insurance companies. As the gathering was not to be over till last night, particulars of what was done cannot be given. But it is known that one company in the association was dissatisfied with something in connection with insurance on grain at Winnipeg, and it is said to have threatened to leave that body.

IT is possible that a butter trade may be opened with China and Japan. A cable order for a trial shipment was received by the Dominion Departmental authorities not long ago. Butter for the eastern market must be packed in sealed tin cans, and Prof. Robertson recently imported from France for the Department of Agriculture a machine for filling cans and sealing them. This machine will soon be be sent west to be put into operation.

ON Monday last representatives of various accident insurance companies met in Montreal. Those present were Mr. F. F. Parkins, of the Travelers; Messrs. Hubbard and Russell, of the London Guarantee; Mr. G. A. Roberts, of the Manufacturers'; Mr. A. L. Eastmure, of the Ontario; Mr Elmo, of the Canadian Railway Accident Co.; Mr. F. F. Rolland, of the Ocean; Mr. Griffin, of the Employers' Liability, and Mr. T. H. Hudson, of the Canada. The object of the meeting was to get something done to prevent the cutting of rates, because there is no contract among the companies such as exists in the United States. It was decided to prepare a statement of what was needed, and this will be presented at a meeting a ortnight hence.

THE Imperial Life Assurance Company is opening a branch in Winnipeg, with Mr. J. S. Wallace as general agent.

IT has been decided by the Toronto Electric Light Company to make a further issue of $600,000 stock. Shareholders can get it at par at the rate of three new shares to seven old, if of record October 10th, and 10 per cent. to be called up December 1st. The subscribed capital of the company will then be $2,000,000, and the paid-up capital $1,460,000,

WE note in this column the following quotations of bank shares on the Halifax market at 21st September, which came too late to be incorporated in our stock and bond report this week: Bank of Nova Scotia, 205 to 212; Merchants Bank of Halifax, 174 to 178; Union Bank of Halifax, 145 to 150; People's Bank, 102 to 106; Halifax Banking Co., 145 to 150; Bank of Yarmouth, 112 to 116; Commercial Bank of Windsor, 113 to 117.

THE tobacco and cigar men at their meeting this week, resolved to ask the Government that a duty of 10c. per lb. on raw leaf tobacco be collected upon standard weight, also that a rebate be made on the 14c. per lb. now paid on the clippings from this tobacco which they may desire to export again; and that they be allowed, if working imported tobaccos solely, a rebate of 10c. per lb, less ten per cent. on all leaf cuttings containing no stems, when exported from Canada. Discussion as to a label was held over, but reference was made to "the growing prevalence of smuggling cigars and tobacco along the frontier of Canda," and to the fraudulent practices carried on in the way of substitution in the cigar business.

CANADIAN manufacturers and importers are most accommodating to persons who wish to make experiments in retail storekeeping. Young men or old, men on salary even, whose children can wrap up parcels and whose wives can "keep store," find it easy to obtain a stock of goods, whether they understand business or not. A. J. Allaire, of St. Guillaume d'Upon, was a clerk in a shop. He began for himself in 1894 on a trifling borrowed capital. Within little more than a year he got into trouble, and asked for a compromise on liabilities of about $4,000, at 42½ cents on the dollar. Of course he got the settlement and of course he recommenced. He is again in hot water and has assigned.——Another case in point and another very brief business career is that of J. F. Martin, of Sherbrooke, formerly timekeeper in the employ of the Jenckes Machine Co., who started a boot and shoe store only last fall. He found it easy to start, but making money was a different story. A demand of assignment has been made upon him by the Ames Holden Company, and he offers 30 per cent. on liabilities of $3,380. Not a small figure, this, to pile up on credit in less than twelve months.

THE SITUATION.

An unexpected change in the silver problem has occurred. France proposes a free coinage of silver at a ratio of 15½ to 1 of gold. The Bank of England, in a letter to the Chancellor of the Exchequer, announces that it is prepared to hold to one-fifth of the bullion held against its note issue, in silver, "provided always that the French mint is open to the free coinage of silver, and that the prices at which silver is procurable and saleable are satisfactory." This looks as if there was an understanding with France on the subject. The condition attached by the Bank of England to the increased use by it of silver, is important. The bank is willing to try the experiment of raising the price of silver, and if its action, in conjunction with France and the United States, did not have that effect, the experiment would have failed, and all parties might find it necessary to revert to their present condition. To make success certain, the co-operation of Germany would seem to be necessary; the first cause of the depreciation of silver was the demonetization of that metal by Germany; other countries allowed the example thus set, and silver having lost its principal use, became a drug in the market. Under these circumstances, the continuance of even the ordinary production of silver would have been an overproduction, and when to this cause was superadded a great increase in the product of the mines, at lower cost, the whole stock of the world's silver came to represent an immense sacrifice.

If the plan suggested by France and endorsed, in part, by the Bank of England, be carried out, the silver movement will not stop here. The next step would probably be to reopen the India mints to the coinage of silver. India has suffered enormously by the decline in the purchasing power of her silver money, and in this way she has become the victim of a fashion set by Germany and followed by other countries. If China, which uses large amounts of silver, would consent to coin it, her power of absorption is quite sufficient to solve the silver question, even if Germany should refuse to join the present movement. In what has been done so far, the unexpected has happened, and strong and even angry protests against the new policy rend the air of England; but against the great forces now in action, they may, for the present, be powerless. The governor of the Bank of England seems to hint a fixed price for silver when he speaks of a satisfactory price to buy and sell at. But who is to undertake to buy all the silver offering at a fixed price, as the bank is now under an obligation to buy gold? If the Bank of England and the Bank of France were to act in conjunction with some buyer, in the United States, the result would be a dangerous inflation, in which prices would go up at a bound, to be followed by the inevitable collapse. But such a scheme as this cannot be in contemplation; the steadying of the price of silver must be intended to be left to depend upon the natural effect of the restored demand. Whether such steadiness can be procured in this way the governor of the Bank of England has an undefined doubt, which, in case of necessity, he would convert into a harbor of refuge from the consequences of what would, in that case, have proved to be a mistaken policy.

Though the United States, as a silver producing country, is greatly interested in the restoration of silver to its former place in the currencies of the world, precisely what part she would play in this move has yet to be shown. The so-called currency reformers of the Republic have, for the most part, schemes of their own, which look only to their own profits, chiefly from a paper currency secured in a way which experience, in their own country, shows to be inadequate. That experience the present generation has almost forgotten; but the danger of reversion to a state of things in which, down to 1846, $200,000,000 of bank paper had become absolutely worthless, cannot be great. Still, reversion to a system of small banks, with an unsecured circulation, would do it. Much of the opposition to silver in the United States, arises from the fact that it is capable of competing with small bank notes, which some currency reformers would like to issue at will, without giving security as at present. But as the major forces of the Republic are the real interests of the nation, as a producer of silver, no real set-back to the present movement in favor of a restoration of silver to its old monetary position need be looked for, in this quarter. Though it be possible to refer to another country where such a system, less the small bank feature, prevails, it would not do to jump to the conclusion that conditions have so changed in the Republic as to make its adoption there either desirable or safe.

The Attorney of the United States has at last, after long and careful consideration, given his opinion on the question whether goods coming from foreign countries, directly, through Canada into the United States are subject to the discriminating duty of 10 per cent. His decision that they are not, may or may not be accepted as final by the rival railway corporations, in whose favor the law was altered. In the meantime, the authority of Attorney-General McKenna's opinion will prevail. The question is one of the interpretation of the statutes, which, in the opinion of some, conflict; but the Attorney-General is of opinion that there is no conflict, but that each of these statutes standing alone has its own independent purpose. This is just the state of facts in which the acute minds of corporation lawyers love to revel, and the chances are that they will advise the corporations in rivalry with the Canadian Pacific to appeal against the decision of United States Attorney-General to the United States courts. That is the usual course in such cases; here, where all is not clear, where technical difficulties of construction admittedly exist, these corporations will not be without temptation to act upon that advice. Congress is the ultimate arbitrator in all cases which involve questions of public policy; but it is not at all certain that Congress, with its eyes open, could be induced to make the discrimination apply to foreign goods in bond passing directly through Canada into the United States; for while some railway companies would favor this course, others find the operations of the Canadian Pacific favorable to their interests, and distinctly say so.

All parties are to be congratulated upon the decision, which is practically unanimous, to make the welcome of Sir Wilfrid Laurier, to Toronto, a non-partisan instead of a partisan demonstration. This will, of course, not be construed as a general acceptance of the whole programme of the Government. It means that Sir Wilfrid, while in England, well and worthily deported himself, as the representative of Canada, and that the country is proud of the figure he made. A mere partisan reception and entertainment, in the chief city of the chief Province of the Dominion, would have been a woeful belittling of the occasion. Party preferences and party dislikes, we can understand, but both would have been entirely out of place in welcoming Sir Wilfrid to Toronto, after his return from the Jubilee celebration. All that remains to be done, to make the reception and entertainment what they ought to be, is to secure that no discordant note be heard at the festivities, and to remember that subjects on which political parties differ, be on such an occasion, in good taste and social propriety, tabooed. The Board of Trade may be relied on to do its part; the city council would, doubtless, worthily perform its part in the formal reception.

A decision has been come to by the Government of Ontario not to permit alien American laborers, unless domiciled or resident in Canada, to work in the lumber woods of the province. This is a reciprocation of disabilities, such as, speaking generally, obtains with some approach to universality, in Europe. It is not a desirable policy, and except in the way of reciprocation would never have been thought of, much less sanctioned, by any Government in this country. Under the actual circumstances it will be necessary to find what constitutes a resident of Canada, and when a person can be said to be domiciled in this country. Domicile is the place where a person makes his home, though he need not necessarily have any intention to acquire citizenship in the country in which he is domiciled. If a man has been in a particular country for some time, say a month or six weeks, he is said to have resided there for that time. The question may arise, and in fact must arise, whether Americans now in the lumber woods of Canada, having gone there with the intention of remaining there all winter, are not residents of Canada; and it will probably be decided that they are. If so, the effect of the order-in-council will be not to send back laborers now in Canada, but only to prevent others going into the woods. Domicile is not so easily acquired, and we are probably destined to hear little of this qualifying condition.

In time for the winter cut the Ontario Government decides not to make it obligatory on timber license holders the manufacture of the logs in Canada. Considerable pressure was brought upon the Government to induce it to come to a different decision. It is understood, however, that the present decision is to affect only existing licenses; these will expire next April, when the question of future policy will be open. What will the Ottawa Government do in the premises is still an unsolved problem. If we may judge by indications, it will do nothing. Close political friends, if not agents, of that Government have, for weeks, been urging objections to a policy of retaliation against the United States for the $2 duty on pine. The hints thrown out that the Ontario Government ought to step into the breach, have failed of their purpose; and it looks as if there would be neither compulsory manufacture in Canada nor retaliation.

Once more the eternal seal question crops up; the several Governments interested have agreed to ascertain whether seal life is really threatened with destruction. The enquiry will go on at Washington.

BANKING RETURN.

We give below a condensation of the figures of the statement of Canadian banks for the month of August. It is compared with the bank statement for the previous month, and shows capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, &c.

CANADIAN BANK STATEMENT.

LIABILITIES.	Aug., 1897.	July, 1897.

Average Dominion notes held during the month	16,586,384	15,873,894
Greatest amount notes in circulation during month	34,928,862	33,755,738
Loans to directors or their firms	6,678,798	7,168,617

In August last year there was an increase of $2,000,000 in bank circulation, which was thought remarkable then, considering the low range of prices. This year the increase over July is only $1,700,000 although there are better prices for various articles of farm product now than then. Another feature that challenges remark is that while much is heard of improvement in business as a result of good crops and better prices; while factory pay-sheets that we have seen indicate greater industrial activity in Canada; while importers say that retailers are buying with more freedom; while grain is being bought for cash to an extent exceeding, at certain Ontario points, any year since 1892, yet the bank returns show that current loans and discounts are two millions less than in July, 1897, and five millions less than in August, 1896. It may be that the September return will show the improvement; meanwhile it is impossible to doubt that the indications to-day are all in favor of better business. The hopefulness of tone is a valuable feature, and it is generally observable.

The extent to which economy of the people has contributed, during the last few years, to improved commercial conditions should not be overlooked. Canadians have been living frugally, and the result of this thrift is seen in an addition to their savings. In August last year the amount of deposits in the banks was $188,415,000; in July, 1897, it was $205,000,000, and last month it had increased to $210,000,000. The increased extent to which our banks are making advances in the United States as a feature of the return. Business is active over there, and they are using $27,000,000 of our money, where a year ago they only employed $15,000,000. Call loans on bonds and stocks have gone up a million. This is hardly a result of the recent "boom" in stocks, the justifiableness or otherwise of which is a matter to be demonstrated later.

MUNICIPAL EXPENDITURES.

Expenditures for municipal purposes have within recent years reached enormous amounts. There has been an almost constant increase in the demand for the services of the municipality in directions where it could replace individual or company service, and to meet this request, new buildings and works have been constructed, or the old have been made more extensive. The industrial operations conducted by the state, form, as a rule, a fair percentage of the total aggregate in the community. The question has naturally arisen, to whom should be given the advantages incidental to the construction of these different municipal undertakings? There is no doubt as to who must bear the burden of the expenditure in connection with them. Taxation falls entirely upon the citizens within the municipality; and although the increased efficiency of the public institutions may, in part, make amends for the growing burden of taxation, it is not always an easy matter for the taxpayer to trace the connection between the demands made upon him by the state, and the benefits he receives.

It is generally regarded as a part of the functions of town and city councils to build up industry within the municipality. The method most frequently followed is to attract manufacturers from other parts of the country by bonuses, or other substantial inducements. In many instances it appears impossible for aldermen and councillors to take a broader view of the industrial needs of the municipality. It does not apparently occur to them that it is necessary to encourage manufacturers whose factories and works are already situated within the town. When contracts are to be given by the council, home manufacturers are entitled to consideration. We do not wish to be taken as advocating the giving of contracts for municipal purposes in all cases to tenderers because they bappen to have works within the limits of a particular city. But where equally good results can be obtained at no addition in costs it is not unreasonable to ask that the preference be given to those who with their employees assist in paying for the required works. The complaint has been frequently made by manufacturers that although under conditions of fair competition, where the person or firm awarding the contract has to pay the expenditure connected with it, home tenders are accepted, yet when the decision rests with a committee or elected body of representatives, the contract has too often been given to foreign manufacturers. Whether frequent occurrences of this kind mean corrupt influences, or illustrate the scriptural saying that a "prophet is not without honor save in his own country," the public must judge. This much may be safely affirmed—all expenditures for public purposes should be made only after a careful consideration of the claims of home manufacturers.

ONTARIO LOAN COMPANIES.

We have received the Ontario Government's abstract report of the statements made to it by financial corporations, nearly one hundred in number, for 1896. These the pamphlet divides into three groups: (1) Mortgage Loan Companies; (2) Loaning Land Companies; (3) Trusts Companies. The first group contains 78 companies, 56 of which have only permanent stock, and 22 withdrawable stock, or being of a terminating building society character; the second contains eight companies, which buy, hold and sell lands, as well as make loans; the third contains three trusts companies, an equal number lately formed having made no return. The Guelph and Ontario company and one in Ottawa make no return, and those of some half dozen others were received too late for publication in the abstract, whose figures relate to the year ended with December, 1896.

An effort has been made in this compilation to secure information of value to the community by requiring definite replies under a number of headings, describing assets, liabilities and miscellaneous figures. We present below total of the principal headings, such as among assets the aggregate of loans on mortgage, of loans on bonds and stocks, of cash on hand and in bank; and among liabilities the deposits, debentures and debenture stock. There appears no difficulty at getting at the liabilities of companies, but some of the assets statements are not so easily understood.

It would seem that some of the headings in the table of assets are interpreted differently by different companies. They are differently answered, at any rate. And again some companies make no answer whatever to the demands of the schedule; they simply leave the line blank. To attempt generalizing under these conditions is useless; and to found any comparisons or ratios upon them is absurd. To illustrate what is meant. We desire to ascertain from this return what proportion the "lands held under power of sale" ($3,837,681); "real estate absolutely foreclosed" ($1,582,736); "real estate otherwise acquired" ($1,226,015) bear to the $95,500,000 of "loans secured on real estate" at the close of 1896. Forty companies return sums varying from $10,000 to $484,000 each, under the heading on pages 2 and 6, "lands held under power of sale;" but fifteen make no return under this item, but most of them answer it under the heading "mortgaged land held for sale," on pages 23 and 29. Again, under "real estate absolutely foreclosed," some twenty companies make return aggregating a million and a-half—the others leave it blank. As to real estate otherwise acquired, which may mean, for example, farm or other lands of which the mortgagor has given a quit-claim deed, there are blanks in the return where one might expect to find tens or hundreds of thousands of dollars.

It is apparent, therefore, that either some companies misunderstand the meaning of the headings in such case, or that they simply decline to give the information to the Government. If this return is to be of any service in enabling investors, brokers, journalists, or anyone else to judge of the standing of companies from a comparison of their figures, either a more explicit definition of the meaning of the headings must be given like the interpretation clause in a statute, or some means must be found of getting *all* companies to answer to each enquiry made which is essential to an understanding of its position.

OUR EXPORTS OF LEATHER.

Canadian tanners since the year 1889 have been giving increased attention to the export markets, and since that time considerable development in the trade has taken place. Some weeks ago we referred in detail to the exportation of Canadian sole leather, which constitutes about half of our total exports. The trade in black leather is also attaining a substantial basis. A number of tanners are sending abroad a large part of their annual output, while a prominent Ontario firm is at present making arrangements to export black leathers in large quantities. Shipments of splits, glove grain and buff to the United Kingdom have brought good returns. A fair amount of business has been done in grain upper leather. Rough splits from Canada have been well received, and if this trade were followed up it should in time yield fair results. The position of the Canadian tanners in England is attracting some attention there at the present time. The *Boot and Shoe Trades' Journal*, of London, Eng., says: "The thousands of tons of hemlock leather which come from America ought to come from Canada. There is no reason why they should not, except lack of enterprise on the one hand and want of appreciation on our part on the other. When we consider Canada's natural advantages, her growth of cattle, her immense forests and her nearness to Europe, the Canadian leather trade ought to be one of her first and greatest industries. There is, however, every reason to believe that we are on the right track now."

The British markets at the present time are showing satisfactory indications of growing strength. At the Leeds leather fair, recently, a considerable amount of business was transacted, and much more leather would have changed hands if tanners would have accepted recent prices for certain low-priced goods. Heavy bends, offals, and kips were in good demand. A recent mail advice says: "As the season advances, the demand for heavy sole is better, and prices rule very firm. American sides have risen in value ¼d. to ½d. per lb., which will further strengthen home tannages. There is good enquiry for English bends of all weights, which remain without change. For common and shaved hides there is a moderate demand, but a considerable advance in prices ought to take place unless raw hides recede, or tanners suffer heavy loss. Home tanned kips continue in short supply, as the price of raw kips is too high to allow tanners a profit. Butts are in very good demand, and are sold readily at very full rates. There has been a good sale of all classes of bellies both for consumption and on speculative account, which has enhanced their value. Light shoulders for slipper work can be cleared readily at late quotations. Kip shoulders and bellies are sold forward, and prices are better. There is also a fair inquiry for hide bellies and shoulders suitable for brown work. In curried leather, the demand for kip butts has much improved, the run being more especially on 30 lb. to 50 lb. butts, though heavier averages are byno means neglected.

ACCIDENT ASSURANCE.

A branch of the insurance business whose aggregate reaches seventy-two millions of. dollars, and whose premiums in one year exceed four hundred thousand, is an important branch. These are approximately the figures of accident assurance in Canada for 1896. Nine companies divide the business, for the Sun Life has retired from the accident field. Five are Canadian, one American, the rest British companies. The number of policies in force at the end of the year was 25,809, and their aggregate $72,772,955, but some three thousand policies had ceased during the year, for the number issued and renewed in the twelve months was 28,971, and their aggregate $81,024,188. Total premiums received amounted to $424,010. The Travelers and the London were the two companies that did the largest business, each exceeding $17,000,000 in amount, new and renewed, for 1896. The Manufacturers did something over $12,000,000; while the Canada Accident Company, whose Canadian business approached $7,000,000, issued besides a million outside of the Dominion. Claims paid amounted to $232,583, and there were unpaid at close of year $62,853 in claims not resisted. Adding these together, we have an aggregate loss of $295,436, equal to 69.67 per cent. of the premiums.

OUR AUSTRALIAN LETTER.

The initial bad luck of Mr. Huddart has stuck to the steamer "Aorangi" of his line, and she has made a record slow passage to Vancouver and back to Sydney. She did well enough on her voyage from England, but her grate bars did not suit the coal put on here and her forced draught machinery is badly arranged. She is now undergoing alterations that will improve her speed, but it will require some new machinery, now on the way out from England, to make her a seventeen-knot boat. She proved a fine sea boat, however.

The other steamers of the line have made up for this bad luck. The "Warrimoo" made a twenty-two-day passage, but her sister ship, the "Miowera," which arrived at Vancouver on Saturday last, did still better, making the trip in twenty-one days, the best yet done. The "Miowera" is commanded by Capt. Hemming, a Canadian from the county of Drummond, Quebec.

The line has lately been carrying some distinguished guests. The "Warrimoo" brought down Lord Ranfurly, Governor of New Zealand. He has freely expressed his admiration of the Canadian route. One paper says: "He is very enthusiastic upon the Canadian Pacific route. The hotels are excellent and the scenery on the C.P.R. grand beyond description. Of the steamship "Warrimoo" he said she was the finest ship he had ever travelled on. Granted she might be a little bigger and a little faster, but so much admitted all else must be of unqualified praise. A perfect sea-boat, excellently equipped, and splendidly provided. Our experiences aboard her were all of enjoyment."

The drought is broken up and the prospects for a harvest are now fair. The wool clip in a large part of the country will be below that of last year, but it is hoped that the price will in some degree compensate for the deficiency in quantity. Trade is looking up in consequence, and credit is better.

You are never sure until the harvest is reaped in December how it is going to be, but the probabilities favor the expectation that Australia will grow its own bread. Nevertheless, Manitoba has got a reputation that may ensure a continued shipment of its flour here. This can only be determined by experiment.

If flour cannot come, there will be more room for other goods, which have been badly blocked out for the past year, very much to the detriment of Canadian trade generally. This is so much the case that in some lines the work will have to be begun over again.

In the cargo of the "Warrimoo" was a shipment of butter from the State of New York. Part of it was creamery and part factory. It was shipped in refrigerator cars by C.P.R., transferred at night to the cool chambers of the ship, and came over in first-class condition. The creamery is pronounced to be good, the factory not quite up to expectations. It is selling at from 20 to 25 cents per lb. to the trade, which is about four cents below local make. The importers expect to do fairly well out of it Where is Canada in this business? Upon enquiry, the Canadian Commissioner says he has called attention to this market to which butter could just then be sent at a profit, but there were two difficulties in the way. First, Canadian butter has the reputation of not keeping, and second, no Canadian appears to be ready to ship. He is reporting on it this month, I believe.

Orders have gone to a Canadian packing house for a sample shipment of Canadian hams. It is hoped it will be filled as instructed and come out all right. The transaction means some business for Canada if it does. An order has gone to a New Brunswick tanner for carriage leather. If no mistakes have been made in the freight and price, that leather, if up to sample, will take this market.

This mail carries to the Dominion orders for axles, paints and varnishes. It looks as if the trade in these had got upon a good footing.

The Massey-Harris Company have just opened two fine warehouses and show rooms in this city; one for agricultural implements and the other for bicycles. The inspection of Mr. McBride is likely to lead to a large extension of their implement trade.

A very good order has gone to another Canadian manufacturer for implements. Hitherto, the importer has handled only United States and European machines, but as the tide seems to be setting in Canadaward, he thinks he must be "in the swim," and hence the order.

The bicycle trade has been a bit dull, but with the improved harvest prospects this trade has brightened, and judging from the shipments from the city, the Canadians were the first to catch the freshening breeze.

Travellers are here representing Canadian manufacturers of boots and shoes, wall paper, bicycles, carriage wheels, axes and farm tools. In one case this is a second trip, the first being sufficiently encouraging to warrant the repetition.

The Monetary Times, just at hand, has an article on Canadian pulp and paper. Orders have gone forward from here for pulp for paper mills in this country, and correspondence is in process respecting paper. The paper will follow in the wake of the pulp. A proprietor of a leading newspaper said the other day "When a representative of a Canadian paper mill comes here I want to see him."

The proposed Federation Bill for a United Australia is now before the Parliament of New South Wales, and is getting a rough mauling in both houses of Legislature. The procedure would puzzle the average Canadian. The present scheme of federation is the design of the Premier of the colony. He and two of his colleagues had seats in the convention which framed the proposed constitution, and framed what was supposed to be not the best, but the best possible, measure. Nevertheless his colleague, who has charge of the bill in the House of Assembly, told the House, "I am in charge of this document and cannot move any alterations, but you can." The members took him at his word, and have changed all the sections over which there were the chief struggles in the convention. In the Upper House it is still worse. There the Attorney General, who is the mouth piece of the Administration, in a speech of some humor and much invective, announced himself as the "arch destroying angel of any scheme of Australian federation." The convention resumes its sittings in this city next month to consider the amendments proposed by the several parliaments. It was hoped that Queensland would be represented at the convention when it met, but the Opposition in its Parliament baulked the scheme to send delegates. The prospects of federation, therefore, are not as bright as they ought to be, but when it is submitted to the vote of the people, they may rise to the occasion. W. B.

Sydney, N.S.W., August 16th, 1897.

COTTON CROP OF THE UNITED STATES.

The statistics of the cotton crop of the United States for the year ending Sept. 1st, 1897, have been compiled by the *Commercial and Financial Chronicle*, of New York. The crop amounted to a total of 8,714,011 bales (weighing 4,383,819,971 pounds) as the crop for year ending August 31st, 1897, against 7,162,473 bales (weighing 3,595,775,534 pounds) as the crop for the year ending August 31st, 1896. The mills of the United States consumed 2,887,047 bales. The exports by sea were 5,968,422 bales, and by rail to Canada 76,848 bales, or a total of 6,045,270 bales. The stock on hand at the close of the year thus amounted to 77,015 bales.

The season of 1896-97 throughout was disappointing. Few, if any, encouraging features in the cotton manufacturing industry of the United States can be mentioned. Sanguine expectations have abounded, but the financial returns of the mills for the twelve months closing with August 31st, 1897, have been very far from satisfactory. The industry shared in the industrial depression so general in the United States. Of the various departments of cotton manufacture print cloths have probably during the season been least favorably situated. Even the efforts made in the closing months of the previous year to put the market in better shape by reducing stocks of goods through a reduction of the output signally failed, and similar efforts this year have accomplished comparatively little.

Although the home trade was dull some encouragement was found in the export movement. While the shipments to South America, Mexico, Continental Europe and the Central American States have been less than in 1895-96, there have been very important gains in the exports to China, Japan, Africa, Great Britain, British North America and the East Indies, the movement to China having more than doubled after an increase of over 100 per cent. the preceding season, and the shipments to other countries in Asia and Oceanica have risen from $606,475 to $1,971,969. For the fiscal year 1897 shipments to China via Vancouver, were 34,845 packages, containing 24,574,600 yards, against 26,720 packages or 18,027,600 yards in 1895-96.

The falling off in the demand for manufactured cottons naturally leads to low quotations in the raw markets. Belief in higher prices was somewhat encouraged by the rise in September last, but the upward turn was only temporary, prices gradually receding until 6 11-16 cents for low middling cotton was touched in December. Between that price and 7 1-16 cents the quotations fluctuated during the succeeding three months, after which the general tendency was upward until May 15th, when 7½ cents was reached for low middling uplands. Subsequently fluctuations were within a narrow range, the quotation rising to 7⅝ cents in July, and reaching 7⅞ cents on August 30th. In only three years since 1869-70 (1891-92, 1893-94, and 1894-95) has the average price of cotton for the season been lower than in 1896-97.

Of the growing crop the *Chronicle* states; "Compared with 1896 the growing crop is a late one, and consequently more dependent upon future developments and conditions than an early crop. Then again, our acreage report showed that the start in the spring as a rule was backward and otherwise not favorable, though Texas was an exception. Hitherto these early defects have not disclosed weaknesses, the conditions of growth in June, July, and over a large section in August having been less trying than usual, so that the plant has nowhere met with any real disaster. At the same time the late feature is just as it was in the spring, having in no degree been made good. In Texas the dry weather which prevailed over a large part of the State from early in July until after the middle of August caused apprehensions of serious injury, but since rains have fallen the outlook is improved."

NOVA SCOTIA'S SUMMER TRAVEL.

Those of our western readers who have visited the western portion of Nova Scotia know of its attractions. The fame of the Annapolis Valley is great, Blomidon and Grandpre have been made classic by Longfellow just as Baddeck in Cape Breton has been popularized by Dudley Warner. But there is a part of the west of Nova Scotia off the usual line of travel, and this is the south-west coast, from Halifax to Yarmouth. One can get to Digby by rail, and to Yarmouth by rail, while a line is being extended to Shelburne; but from Yarmouth to Halifax or *vice versa* one must take boat. In the days when the present writer went to Yarmouth it was by leather-springed stage, with four horses. Pity it is that the beauties of those south-western counties of Nova Scotia, Lunenburg, Queens and Shelburne, are not better known and more easily accessible. There are many beautiful localities on the route; Mahone Bay has a succession of charming spots; Chester is becoming known, but Mill Village, Petite Reviere and such places have charms of their own. It is no wonder that of late we hear of American travellers revelling for weeks and months in the delights of such boating, sporting and bathing as are there to be had. The wonder is that this part of the province has not long since been made more easy of access.

To-day, however, a movement is being made among the people of Halifax and the West Coast, which may bring about action in the direction indicated. The *Chronicle* has been agitating in the matter in the interest of Halifax. One day this month a citizen of Halifax placed in the keeping of the journal named a cheque for $500, conditionally towards the raising of $10,000 to survey the route from Halifax, via Shelburne, along the shore. A survey of a portion, 30 miles, has indeed been already made westward from Halifax, and the Coast Line Railway has been built that far, while the Provincial engineers report for 1888 says that there are no engineering difficulties in the way of such a railroad. The Halifax Board of Trade declared in favor of the project last week at a meeting, when half a dozen of the prominent men of the city spoke. The resolution carried said, that the building of a railway connecting the city of Halifax with Yarmouth and the various towns on the Atlantic coast between that place and the capital, "would give necessary railway facilities to a long settled and comparatively populous section of the province, which has hitherto been without them, and would be of great advantage to Nova Scotia as a whole and to this city in particular." And it was further resolved, "That the Dominion and local governments are hereby requested to secure the usual subsidies to help in the construction of the proposed railway"; such railway to strike the Intercolonial not further north than Piers Mills.

If there were any question as to the adequacy of traffic to be secured by such a road, it should be sufficient to point to the number of towns and villages it would serve. But a further live argument is adduced by a writer, who cites the experience of the State of Maine, tourists, etc. "The summer resort business," says the New York *Nation*, "is already nearly, if not quite, the leading industry in Maine." In 1893 the Commissioner of Labor Statistics put it that its result in money to the State were not less than $10,000,000 annually, of which total $3,000,000 was spent at hotels and boarding houses, $1,000,000 for farm produce, and $100,000 for services of guides. Nova Scotia has equal attractions with Maine in attractive localities for tourists, and its facilities for attracting American travel to its west coast are better now than ever. There are good reasons, therefore, to urge the completion of such a road as the Coast Railway, and to expect that it will do great good to Nova Scotia in opening up her summer resorts and attracting tourists, as well as in furnishing needed convenience in travel to an important section of the province.

GAS FROM STREET REFUSE AND GARBAGE.

The present is an age of research, experiment, revolution in fact, as far as regards industrial and economical processes. And the marvel of to-day in mechanics or chemistry may be superseded by the novelty of to-morrow. All over this continent and the older continent, too, health officers of cities are on the look-out for economical and sanatory methods of dealing with garbage. Montreal and Toronto have incinerators, capable of handling so many thousand tons of city refuse per day. Chicago pays enormous sums for the disposal of its garbage, and in many a city of Britain and United States expensive plants have been erected which are more less successful in converting into at least harmless matter or a useful by-product what has so long been not only waste from dwelling and factory, but a menace to health and comfort.

Our attention has been called, within the last few days, to a method of utilizing garbage for the production of illuminating gas. This method is the result of studies and experiments by a Mr. Harris, of Toronto. Animal dung, human excrement, vegetable refuse and peelings, sawdust, shavings and the thousand forms of refuse that accumulate in the highways and by-ways of cities and towns will, it is said, produce at a cheap rate gas that will serve for light and heat. In the experiment we saw tried at Gurney's foundry this week, ten or twelve pounds of material, consisting of melon-rind, potato peelings and animal refuse from a restaurant was put into two retorts, say four feet long and nine inches diameter. Underneath these was a fire of wood and Connelsville coke, which produced a red heat in the retorts. The gas produced passed into an iron cylinder above the retorts filled with broken brick for drying purposes, and thence was cleaned by passing through lime. In thirty or forty minutes the gasometer rose several feet, and the result from this bucket full of garbage and a tumbler full of low-grade gas oil mixed with certain cheap chemicals was enough gas to keep going for nearly an hour eight jets of from five to ten candle-power each. The statement of Mr. Arnett, one of the purchasers of the Canadian right to the process, was that 60 to 70 feet per hour could be produced from the quantity of material we saw used.

It is the estimate of the inventor that a ton of such garbage as was here used—presumably obtained for the price of carting it away—mixed with 40 cents worth of chemicals and gas oil, would produce 14,000 cubic feet of burning gas. As to the quality of the gas produced, an official of the Consumers' Gas Company, who witnessed the experiment, informed our reporter that it is in his opinion nearly equal in quality to the gas now usually supplied to Toronto users, while it is superior, in his judgment, to the average gas supplied in Chicago. From ordinary street-sweepings Mr. Harris says he has produced 8,400 feet of gas; and from sawdust, with a double quantity of chemicals and oil added, 20,000 to 30,000 feet can be produced. Supposing a plant costing $40,000 to be erected, and garbage obtained free, he is confident of making gas at a cost not to exceed 12 cents per 1,000 feet. This calculation does not take into account the cost of plant, labor and fuel. It should be stated, however, that from experiment he expects to get from the refuse burned 40 per cent. of material in a coke which can be used for fuel. The mayor and health officer of Buffalo have been here to witness experiments under this process, and the mayor of Chicago is said to be on his way hither with the same object.

FOR GROCERS AND PROVISION DEALERS.

The wheat crop is said to be the largest and best for many years on Prince Edward Island.

An increase in the price of bread was made last Monday by a number of Montreal baking establishments.

The stock of raw sugar in the four ports of the United Kingdom was 77,000 tons, against 150,000 tons this week last year.

The Alberta creameries operated by the Government have shipped 38,000 pounds of butter to Great Britain, and 40,000 pounds to British Columbia to date. The demand in British Columbia is increasing and the market improving.

At Emerson, Man., a large elevator owned by D. H. McMillan, of Winnipeg, was destroyed by fire on the 16th. The elevator contained about 10,000 bushels of wheat held in store. Its capacity was about 30,000 bushels. The loss is placed at $15,000, covered by insurance.

Northern Alberta exported 50,000 bushels of wheat, 192,000 bushels of oats, and 12,000 bushels of barley of last year's crop up to Sept. 1st, a quarter of a million bushels in all, and worth in cash to the farmers about $70,000, placing the wheat at 50c., the oats at 20c., and the barley at 25c. per bushel.

In Montreal, at a meeting held a week ago, the Grocers' Guild decided to make some additions to the list of grocery articles to be sold hereafter on the basis of thirty days or one per cent. off ten days. Tobaccos, dried fruits and nuts were so added. Our market reports note an advance in some brands of plug tobaccos.

Advices received report fair prospects for the new crop of Grenoble walnuts, and the outlook for Cahors, Marbots and Cannes is said to be favorable. Advices received from Naples are to the effect that the quality of the nuts from that district will be fine, but the crop will be about a third less than that of last year. The shipment of all kinds, it is understood, will begin earlier than usual.

The "Pecqua," with new crop currants for New York, is reported by the New York *Journal and Bulletin of Commerce*, to have passed Gibraltar on the 14th inst. The "Karamania" passed with new currants on the 13th. The "Pontiac" was reported as having about completed her loading of currants at Patras on the 11th inst. The "California" is due to load currants at Patras on the 18th inst.

The question of concentrated food supplies for the Klondikers is attracting some attention. Some years since, when Arctic expeditions were numerous, some of the American packers made a specialty of evaporated vegetables, but the demand having ceased, and not having been renewed until now, there seems to be no supply of this class of goods. An opportunity is now offered for manufacturers who can supply evaporated potatoes, onions and other vegetables in cans for a Klondyke outfit.

Regarding the currant situation, the Hills Bros. Co. say in their circular: "Estimates of the currant crop vary from 125,000 to 140,000. The "Karamania" passed Gibraltar on the 13th instant, one day ahead of the "Picqua," and both vessels are expected here (New York) the last day of this month. Price to arrive, on either of these boats, we quote unchanged at 5⅝c. for barrels Provincials, and per steamers "Pontiac" and "Tergestre," expected about October 10th, we offer at 5½c.

ANSWERS TO ENQUIRERS.

A subscriber in Halifax, who signs "C.," propounds the following questions: "Will you kindly inform me through the columns of your paper how much time a miller can take to fill an order for a car load of flour or other mill products, or a grain dealer to fill an order for a car of grain, (1) when no time is specified when contract is made: (2) when contract is made for immediate shipment; (3) when contract is made for prompt shipment?

Also, if when a car of grain is sold on sample, seller goes to make delivery, buyer refuses to take what is offered on account of quality not being equal to sample, can the buyer compel the seller to produce another car equal to sample sold, or pay damages, or does refusal to have anything to do with the car offered nullify the contract?"

[We reply that that, according to the Terms of Trade agreed to by the Dominion Millers' Association, "immediate shipment" means shipment within five days following the day of sale, while "prompt shipment" means within fourteen days. In such an unusual case as the mention of neither of these terms, and of no time in the contract, we should think the "prompt shipment" term of 14 days would prevail; there is nothing in the book mentioned or in the Toronto Board of Trade regulations governing this point, so far as we see. As to the last query, the receiver of grain claimed not up to sample must establish the fact that it is not up to sample. A mere refusal to accept will not establish this. Let him first establish his right to refuse the car; this done, he will be in a position to claim damages, if any were suffered.]

E. M., City.—The appointment was for three months, we understand, or until a new manager should be agreed upon by the directors. It is an English company.

—"Dollar wheat" and forty-cent silver were the important events in August, says the *Banker's Magazine*. Wheat crossed the dollar line in New York on August 20, the September option selling at $1 on that date and touching $1.06¾ on August 23. Two days after, on August 25, silver fell to 23¾d. per ounce in London, at which price the bullion in the silver dollar became worth about 40 cents. Silver and wheat have now parted company to such an extent that political economists of the Bryan school have apparently abandoned their effort to harness them together. The future of silver is anything but bright; there is no prospect of the India mint being reopened, while Salvador is the latest of a long list of silver-using countries to raise the gold standard.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Sept. 23rd, 1897, compared with those of the previous week:

CLEARINGS.	Sept. 33.	Sept. 16.
Montreal	$12,333,657	$14,194,252
Toronto	7,619,142	8,188,278
Halifax	1,097,009	1,375,841
Winnipeg	2,019,382	1,450,536
Hamilton	838,724	743,383
St. John	637,690	599,364
	$24,546,604	$26,551,654

Aggregate balances this week, $3,700,658; last week, $3,879,051.

UNREADINESS FOR FIRE.

A fire took place in Summerside, P.E.I., the other night doing considerable damage, which we have no doubt illustrates conditions that exist in scores if not hundreds of places in Canada. *The fire appliances were out of order for want of being looked after.* The *Journal* tells us that the steam fire engine which has done splendid work at previous fires, has been shamefully neglected. It took "about twenty-five minutes from the time the alarm rang, before the 'Beaver' began throwing water at all, and it was long after that before she did any effective work. She was not in condition to do good work, the trouble arising, we understand, from defective packing and from the plunger leathers, which leathers, it is said, have been in the engine ten years without being renewed." Then the *Journal* goes on to advocate waterworks and a revision of the niggardly policy adopted by that municipality for paying police and firemen, the result being that neither body is efficient. It is one of the most curious and most pitiful things in the history of municipal workings that so many towns and villages, after spending large sums in providing fire appliances will leave them to rust and rot through neglect and disuse, month after month, year after year. Then when a fire breaks out the machine is not fit for work and the houses slowly burn down.

—A portrait of Mr. George Hague, general manager of the Merchants Bank of Canada, appears in the September issue of the *Bankers' Magazine*. An appreciative notice accompanies the portrait. Mr. Hague's early training in England, and his career in Canada since he came to it, forty years ago or more, are briefly sketched, his tastes and activities and his services to Canadian banking described. One of the closing paragraphs is as follows: "Perhaps the most efficient service Mr. Hague has rendered his adopted country, and the one he will be longest and best remembered by, has been his assistance in placing the Canadian system of bank currency on a basis which is admitted to be perfectly suited to the needs of the country."

—There are banks and shaving shops; there are bankers and extortioners: and there are directors with live consciences, as well as some with metallic hearts. The other day a director in a bank in western Kansas resigned for the following reason: "I tender this resignation deliberately, led to it by the Holy Ghost enlightening my conscience to the fact that the loaning of money at usurious rates, to which policy the bank is committed, is wrong, just as is the violation of any other law on our statute book, and should not be sanctioned by me as professing the name and following the teachings of the Lord Jesus Christ." On this *Rhodes' Journal* comments: "No wonder he resigned. Some of the 'bankers' in that country lend money at three per cent. a month."

—The Empire of Japan is to have a gold currency from the 1st of October next. A circular issued by the Specie Bank, announces that from that date it will buy gold for Bank of Japan notes. The mint at Osaka is busy at present minting new gold coins, the 20-yen coin being struck first. The project is said to be, to mint 10,000,000 yen worth of subsidiary coins, including 50-sen coin, within this year. In order to expedite the issuance of the new coins the usual summer vacation of officials has been dispensed with.

—It is undeniable that a belief exists widely amongst us that governments and municipalities are fair game for overcharges by contractors or servants. Many a man or firm, otherwise honest, will charge on a government job a higher price than he would if working or tendering for an individual, and will contend that he is justified in so doing. In fact people do not recognize that in working for the commonwealth any member of it ought to show exactly the same regard for honesty and economy as if the transaction were with his next door neighbor.

RONDOT v. THE MONETARY TIMES.

Extracts From the Evidence.

(Continued from last issue.)

Q—You did not succeed, and you got a settlement at 50 cents on the dollar? It is hard for the other fellows who were careful and worked hard and paid 100 cents on the dollar? You went down to Montreal, with a great big statement, showing a big surplus of something like $8,000; you got a settlement, an extension of time to pay what you owed on the monthly instalment plan, without interest, and you commenced buying goods on the way home in Toronto; and you were unable to meet your engagements in a month after. Would you say any man who is not biased would say that was fair? Would you say that was fair to other retailers?

A—They could pay 100 cents if they wished.

Q—Or follow your example and make 50 cents on the dollar? A—I did not make that.

Q—"How can they expect an honest and industrious and economical man to pay 100 cents on the dollar when they so willingly accept an offer from a mere speculator in credits?" "The trouble is that no one or two of the creditors in such a case have the courage to speak out and say what they think at the meeting. They do not show their true feelings, for they are afraid of losing the trade of a few weak customers who might hear of their harsh (?) treatment, rather than get the friendship of the better merchants, who would thank them for endeavoring to weed out the dishonest men who live and spend money at their creditors' expense. The earlier our wholesale men understand that they are injuring, more than helping, themselves, by accepting such easy compromises, the earlier will better times come and better looking balance sheets appear at the end of the year, and consequently less grumbling about business and small returns will be heard." That is all true?

A—I don't know.

Q—How many goods do you say you bought between February and May?

A—Those were goods all bought probably in December—spring goods. In February I bought probably $2,000 or $3,000.

Q—Now, I want to know what you mean by this. You tell me you only bought $3,000, and you only owed $12,400 in February to the wholesale trade. I find your liabilities, to the wholesale trade, when you failed, $18,000? Direct liabilities?

A—Yes.

Q—That is nearly $6,000 more? A—$5,000.

Q—So you must have bought $5,000 of goods?

A—Those were spring goods; some came in in January.

Q—They would be in the stock-taking of February?

A—Yes.

Q—Now, your liabilities to wholesale people in June were $5,600 more in June than they were on the 20th of February, so you must have bought that much more goods?

A—No; the goods might have been bought before February.

Q—You only had liabilities in February of goods that were on hand? A—Yes.

Q—After the 20th of February new goods must have come in to the extent of $5,600?

A—Yes: whatever the list shows must have been bought.

Q—There is an evident discrepancy, Mr. Rondot. Your stock was $12,000 on the 20th of February, and your stock was only $12,000 on the 20th of June? A—Yes.

Q—So your stock had not increased any?

A—Whatever the statement shows.

Q—So your stock was the same on the 20th of February as on the 20th of June? A—Yes.

Q—And you owed the wholesale people $5,600 more in June than in February? A—Yes.

Q—Where was the difference?

A—Well, I must have omitted some liabilities, which is easily done.

Q—The amount of stock on the 20th of February is the same amount as your stock list shows on the 20th of June, and there is $5,600 more of liability in June than there is in February? You should have that much more stock in hand?

A—Yes, I should.

Q—Where was it? A—All I had was taken up.

Q—Where was it? A—I don't know.

Q—It cannot very well have been taken off?

A—I don't know.

Q—If you do not know, and cannot account for it, on the face of it it looks very bad, doesn't it?

A—No: very few failures have as much as I had.

Q—That is the only answer you have to give?

A—Yes; if I had been able to pay more I would have paid more.

Q—Had you paid any liabilities to wholesale people?

A—I paid, after February, every dollar I got in: my balance in the bank was only a few dollars at the time of the assignment.

Q—At the time of the statement in February, your liability was $12,000: in June it was $18,000?

A—Whatever the statement shows.

Q—That looks bad on the face of it?

A—I do not think so.

Q—Do you think it was honest to pay Mark Fisher & Son 65 cents on the dollar on their claim, and pay Hamilton only 50? A—Yes; I think it was.

Q—Don't you know the law, where one creditor is paid a certain percentage, other creditors are to be paid the same?

A—There is no failure in the country but some of the creditors are paid in full; there is not a wholesale house in the country but knows that to-day, because if the estate were wound up and sold, the creditor getting 50 cents would not get as much.

Q—Did you tell W. B. Hamilton & Son you were paying Fisher 65 cents on the dollar? A—No sir, I did not.

Q—You have collected large sums from these accounts, and have never paid him a cent?

A—No; never paid other people as well.

Q—Is there any statement made in the article of The Monetary Times that is not true? A—Yes.

Q—What is it? A—Where they call me dishonest, thief, and so on.

Q—Did they call you a robber? A—They call me the same thing.

Q—Refer to the sentence, and I will tell you?

A—Read it, and I will tell you.

Q—"How can they expect an honest and industrious and economical man to pay 100 cents on the dollar when they so willingly accept on offer from a mere speculator in credits?"

A—That is meaning that I am not honest, and I am honest.

Q—Twice in 20 years you have failed, and your creditors have lost $21,000?

A—That is not much. Figure it up on the business, and the percentage of loss will be found to be very small; and I have paid more than some of the wholesale men do when they fail.

Q—You paid what? A—All I had.

Q—You got these goods in May, and you assigned in June?

A—I bought these goods, just only small parcels; I could have got from these people ten times as much, and it would have amounted to the same thing.

Cross-examination, by Mr. McCarthy, counsel for the plaintiff:

Q—Now, you tell us you have been in business in Amherstburg how many years?

A—Nearly 19 years; I started in 1879.

Q—Up to what time with Mr. Deneau?

A—He was nearly six years with me.

Q—You have turned over how many goods in that time?

A—Over $500,000.

Q—It is said you failed in 1888? A—I did.

Q—With liabilities of $25,000?

A—Yes; the biggest offer I made was not accepted by the creditors; they sold out the property for what it would bring: it brought 62½ cents on the dollar, I think.

Q—That was in 1888?

A—Yes: after being in business for nine years. A man by the name of Berry bought the goods: Mr. Deneau bought them from the man, and I bought them from Mr. Deneau. We started business again, Deneau and I, in August, 1888, and we continued for about three years beyond that.

Q—Then you bought Deneau out, did you?

A—I bought Deneau out.

Q—Then, was it true you had to borrow $1,000 from your mother for the purpose? A—That was false.

Q—During the time how has business been in Amherstburg? Has it been like all over the rest of the country?

A—It is bad now: in Amherstburg it is found to be very hard to collect money.

Q—This statement was made up when?

A—Probably from the 15th of January up to the 20th of February.

Q—Would it represent your business at the end of the year, or up to that time?

A—We generally take stock after the holidays, after January.

Q—You do not go back to the beginning of the year?

A—No.

Q—Is there anything here to indicate when stock was taken? A—I think it was in February.

Q—I am speaking of the time this was made up? February 5th notes? Would that be an overdue note or a note coming due?

A—That must have been made up before February 4th; because they would not hold notes out that long: that is what I think: our statement is always made in January.

Q—So the statement here shows, on its face it was made before February 4th? A—Yes.

Q—This statement shows dry goods, ready-made clothing, boots and shoes, hats and caps, all fully stated, taken by your clerks or by yourself? A—By my clerks.

Q—That would be taken in the ordinary way? A—Yes.

Q—Did you take the goods at the cost price?

A—At the invoice prices.

Q—Adding anything for the freight? A—No.

Q—Then your next asset here, $8,001.96, accounts and notes?

A—The absolute amount my book debts would amount to would be $14,000; I valued them as I thought I could collect them.

Q—How did you get at the amount so exact, $8,001.96?

A—That was the value of the notes I considered I could collect in time. I have been in business 19 years, and have quite a few notes outlawed.

Q—When you make up statements, what do you do with them?

A—To some of them, the wholesale men, I sent statements; I sent statements to John McDonald, to Johnston, to Gault Brothers, and to Thibaudeau Brothers.

Q—Now, so much for the statement you made up here as to your assets? What amount do you make as to your liabilities?

A—Well, I omitted the local liabilities.

Q—Well, how were the local liabilities omitted?

A—Well, I sent a statement to the wholesale houses.

Q—Did the local liabilities come in your books?

A—No; they do not appear in my books.

Q—So your clerks, in making up the statement, would not know what the local liabilities were? A—Yes.

Q—And you omitted your banking liabilities?

A—That is what I mean; the principal local liabilities were the bankers.

Q—Have you sent these statements to the wholesale men every year?

A—I did it a couple of times up to last year.

Q—At that time had you any idea you would not be able to carry on, when you made the statement? A—No, sir.

Q—When was it you first apprehended you would not be able to meet the liabilities coming due?

A—On the first of May, 1895; then I had more liabilities coming due than I could take care of.

Q—Do you remember making another statement at the time of the assignment? A—That was a copy.

Q—No? Do you remember making the statement, preparing the statement, of which this is a copy?

A—I really do not remember of making this one, or a copy of that one. No, sir, I do not.

Q—I am told that the wholesale merchants have produced that amongst their papers?

A—Well, if they have, they must have the original. I do not think they can produce that in the original.

Q—Then, when you went down to get an extension in May, did you take anything down to the wholesale people?

A—If I did take anything down, it must have been a copy of the stock-taking.

Q—Do you remember whether you took anything down or not? A—Well, I think I did.

Q—Now, then, you had gone on until the 1st of May, in the ordinary way, buying and selling goods, and getting in money in the meantime? A—Yes.

Q—Buying in the ordinary way, how much would you buy in the course of a month?

A—There are months we buy more than others.

Q—How much would you buy, averaging all your purchases, in a month? A—$1,000 or $1,500.

Q—How much would be the most you would buy in a month?

A—I have bought up as high as $8,000 or $9,000, and I have sold as much as $4,000 in a month. In January we would order probably $2,500 of dry goods, $1,200 or $1,500 of clothing, $200 or $300 hats and caps, and $1,200 in general goods; probably $5,000 in the month; but latterly the orders have been smaller, because the trade has been poor.

Q—Then you got an extension from them, getting merely a release from interest? A—Yes.

Q—You were to pay one-twelfth each month until you paid them in full, and you thought you could do it?

A—I thought I could do that, certainly.

Q—Was it your proposition?

A—It was proposed by Mr. Gault, the extension was. I went down and told them I thought in time I could pay in full, that I had more than I could pay then; then he called for Johnston and Thibaudeau to meet, and they proposed to give that time to enable me to pay them.

Q—How were your expectations realized as to that; how were your expectations being realized in May and June?

A—Well, I had two accounts—one of $1,300, and another of $300—that I was expecting to get every day, and I have not got them yet; I expected to pay for the goods I was buying then, and meet the general payment.

Q—Now, what goods did you buy after you got the extension, from those who did not know about it?

A—I bought from Thibaudeau, Gault, and Johnston, and they knew about it; they signed the paper.

Q—Mackedie—how much did you buy from him?

A—From $300 to $400; only a small parcel, at any rate.

Q—Who is Mackedie?

A—He was a man who had failed and got back his stock; he had great flaming advertisements of great bargains; I went there to buy a couple of hundred dollars' worth, or a little more; well, it was a small parcel in comparison with the business I would do. Although it was only a small parcel, so confident was I about paying for the goods all right, that I got him to divide the amount up, payable in 30, 60, and 90 days, so as to divide it up among the rest. I bought from Glover & Brais a small parcel. Then, in Toronto, I met the agent of W. B. Hamilton & Son on the street. I told him I was not there buying goods. He told me they were running off some lines of goods very cheap, and urged me to go over and see them; and I thought I would be able to pay, and I bought a small parcel.

Q—You found about the middle of June you could not meet liabilities when they came due? A—I could not.

Q—Did they take proceedings against you?

A—Gault Brothers and Johnston issued writs against me; I tried to collect some of the large claims I had, but I could not get them in.

Q—The statement made up by Falls, had you any hand in making that up?

A—No, I had not; it was done by Mr. Falls himself.

Q—Let us see how this compares with what was made up by your clerks in February. Dry goods, $5,759; yours appears $7,268? That you knew nothing about?

A—I knew nothing about it.

Q—He puts doubtful, $265? A—Yes.

Q—Was there 25 per cent. collectible?

A—Yes, more than that.

Q—Bills receivable, etc., reduced about $7,427? Didn't you rely on them as good assets?

A—Yes, they were good, I thought, but I could not go and collect them at once.

Q—You had nothing to do with that? A—No.

Q—The large reduction that Mr. Falls made in the bills receivable was his judgment as a banker? A—Yes.

Q—You thought they were worth more? A—Yes.

Q—You said to my learned friend that your liabilities to the wholesale men had increased between $5,000 and $6,000 between the time of the statement and the time of the assignment? A—Yes; I do not see how that could be.

Q—Liabilities, direct, $18,000? Does that include the banker's liability, which you omitted before, you know, and your local liabilities? A—I think it does.

Q—You think that includes everything? A—I think so.

Q—Whether it does or not, at all events, what you have paid you have told us after the extension? A—Yes.

Q—Mackedie was paid in full?

A—Yes, for the parcel bought at the time of the extension. For the goods bought before that he accepted the compromise.

Q—Hamilton accepted the compromise? A—Yes.

Q—Glover & Brais? A—They were paid in full.

Q—How large was the amount?

A—A small amount, $200 or $250.

Q—You say in the trade, when there is insolvency, it is looked upon as necessary that some of the small amounts should be paid in full?

A—Yes; the wholesale trade know that is done often.

Q—Why or how, or under what circumstances was the amount of 50 cents on the dollar suggested in June, 1895; was it suggested as the sum you could pay or get security for?

A—That is all I could get assistance for; they would not allow me to pay any more than that.

Q—Who were they? A—The largest creditors.

Q—Who were they? A—Thibaudeau Brothers.

Q—Then Thibaudeau Brothers would only become your security for 50 cents on the dollar? A—Yes.

Q—Then the creditors had the choice between selling out the whole estate or taking 50 cents on the dollar with Thibaudeau Brothers as security? A—Yes; they had their own choice.

Q—And Thibaudeau Brothers were willing to trust you to that extent? A—Yes.

Re-examination, by Mr. Gibbons:

Q—You say that your creditors, with the exception of one or two, were aware of your position when you bought the new goods? A—Yes.

Q—How were they aware of your position?

A—I told them.

Q—That you had a surplus of $7,000?

A—What the statement showed; the parties from whom I purchased my goods, with the exception of Mackedie, were aware of my position.

Q—How were they aware of your position?

A—Well, they were aware I was getting an extension of time.

Q—Is that what you mean by saying they were aware of your position? A—That is what I mean.

Q—They did not have a statement of your affairs?

A—I do not know whether they had or not; if they wrote for one they would get it.

Q—A man does not get an extension without showing a statement? A—Yes.

Q—Did you show them the statement when you got the extension? A—Yes.

Q—Then they thought you had a surplus of $7,000?

A—I do not know what they thought.

Q—If they believed your statement?

A—Yes; or I would not have got the extension.

Q—You showed a surplus of $7,547.59? A—Yes.

Q—And what the assignee, Mr. Falls, did, was to deduct the bad debts, and they amounted to about the same amount?

A—Yes, and the bank.

Q—The bank is not in the first, but in the second statement?

A—Whatever you have got there is right.

Q—And deducting $7,000 for bad debts, you ought to have been even? You had $7,000 surplus; deducting as Mr. Falls did, the $7,000 for bad debts, that would just make you even, wouldn't it? A—I presume it would.

Q—And you show a deficiency of $5,000 on the assignee's statement? How is that?

A—Whatever is there is correct. I do not know how it is. I did not make that out.

Q—There is a $5,000 deficiency you cannot make out and cannot account for?

A—There was some I considered good, and the bank would not take them.

Q—There is a difference, a deficiency of $12,000, in six weeks?

A—I don't know. Whatever the statement shows.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending August 31, 1897.

			CAPITAL.					LIABILITIES.					
			Capital authorized.	Capital subscribed.	Capital paid up.	Amount of Rest or Reserve Fund.	Rate per cent. of last Dividend declar'd	Notes in circulation.	Bal. due to Dom. Gov. after deducting advances.	Bal. due to Provincial Governments.	Deposits by the Public payable on demand.	Deposits by the Public payable after notice or on a fixed day.

Molsons and Imperial Banks bonus of 1%, making dividend of 9%.

J. M. COURTNEY, *Dep'y Min. of Fin.*

BOOM CONDITIONS AND BOOM RESULTS.

It is not difficult to get up a "boom" in a new district of great promise, nor even in an old place under given circumstances. But the unnatural conditions which arise under a boom are not easily set aside. We are told that the tradespeople in Rossland are complaining somewhat bitterly of the exorbitant rents demanded by landlords in that place, and such complaints, we believe, are well founded. As the *Mining Record* puts it "When a man becomes a speculative builder in a newly established mining town or camp, it is to be expected that he should realize a profit on his investments proportionate to the great risk he takes. Moreover, the storekeeper himself is making large profits before the day of competition sets in, and can afford to pay a high rental. But these conditions no longer prevail in Rossland." One would think that the landlords would see for themselves the necessity of reducing the rents. If they do not, the *Record* predicts the effect will be injurious in the extreme, not only to themselves individually, but to the business prosperity of their town. Like other places the remarkable mining town of Rossland, the product of one of the most remarkable mining developments of the age, is experiencing the inevitable after effects of a "boom." These effects are salutary if unpalatable, but the unnatural conditions of feverish boom times are already in some directions giving place to more sensible and economical arrangements. We gather from gentlemen who have lately visited the place, that in matters commercial and industrial, as well as municipal there is an improvement perceptible. And the improvement is deemed likely to continue.

CANNING SALMON.

A correspondent of the New Westminster, B.C., *Columbian* gives an interesting review of the canned salmon industry in British Columbia during the past year: "The season now practically past," says the writer, "has been a record one in a variety of ways. The total pack of 840,000 cases exceeds the highest previous record by 360,000 cases, and it is entirely made up of sockeyes. Quite a number of cohoes will yet be packed, to increase the grand total. The number of men engaged at the work of fishing greatly exceeds any previous record.

"The chief sockeye run, this year, continued for three weeks. During that period the run was so large that, although the forty-two canneries on the river were in full blast from 5 a.m. to 9 p.m., on the average, they could not pack the number of fish furnished; in fact, the fishermen's chief difficulty for a time was to restrict the number of fish caught to the number of the cannery limit.

"The season has its lessons, and the following are outlined as some of them. Better prices cannot be allowed the fishermen if the traps are to be continued in competition with them, and if aliens are to be allowed to take part in the work. If we must submit to American trap fishing, then let the fish be packed separately and branded differently.

"The season has emphasized the need there is for better sanitary regulations. Dumping into the river fish offal and surplus fish, as has been done, is both mischievous and wasteful. Every one admits that a most valuable manure can be had from fish offal, yet evidently there is not yet enough assurance of its success as a commercial venture to entice private firms to take hold of it. It will greatly benefit the public interest and the cannerymen if the offal is removed and handled in a systematic way; they should combine in a substantial effort to utilize the offal. This can only be done by the Government establishing an experimental factory, and making a levy from the canneries of a certain rate proportioned according to the season's pack."

Commercial.

TORONTO MARKETS.

Toronto, Sept. 23, 1897.

Dairy Produce.—There bas been a good trade in the past week in the better grades of dairy butter. For choice descriptions of butter 14 to 15c. per lb. is obtainable, and supplies of this kind are none too abundant. Of inferior and medium qualities of butter there is however, a surplus supply in the market and sales can be made only at a sacrifice. In consequence of the better feeling [in dairy butter, creamery shows a somewhat improved tone. The export market, however, is quiet, and until it picks up we can expect little advance in values over present rates. Cheese remains dull. We review the situation elsewhere at length. At present prices receipts of eggs are about equal to the requirements of the trade. The market is fairly well supplied with eggs, but of No. 2 stock several dealers are holding accumulations.

Grain.—The markets are dull and the tone somewhat weaker than last week. Wheat has fallen off 2 to 3c. per bushel in quotations Supplies are coming out freely, but farmers evidently believe that the future has better things in store, as they are bringing out, as a rule, their poorest wheat and are holding back the best samples. Some oats are being received, but other cereals are slow of movement. An advance of 1 to 2c. per bushel is recorded in corn, and the demand for feeding purposes is strong. Peas are being offered slowly. Barley has scarcely commenced to move as yet. The declining tendency on this side of the Atlantic has been checked at times by the comparative firmness in European markets despite the large world's shipments last week, approximating 9,200,000 bushels, leading to the addition of 2,000,000 bushels to the quantity on passage to Europe. This was counterbalanced slightly by the reduction of 530,000 bushels in the English visible. There was an increase in the American and Canadian visible supply of 949,000 bushels, or rather more than was expected, but a steady increase would appear desirable before winter actually sets in in view of the small total in sight as compared with former years, namely, 15,766,000 bushels, against 47,602,000 last year, 38,093 000 bushels two years ago, 70,200,000 bushels in 1894 and 57,146,000 bushels in 1893. As the *Journal and Bulletin of Commerce* points out the visible supply has rarely fallen below 40,000,000 bushels during September, running up as high as 89,000,000 bushels in December, 1894.

Hides and Skins.—A steady market continues to rule. Prices are unchanged at last week's quotations, dealers paying 8½c. for green cow hides, and offering cured at 9c. per lb. Skins remain unchanged. Tallow is rather dull, showing little improvement in price.

Leather.—Trade is quiet and unchanged. The demands of Canadian manufacturers for stock are small, and trade is on a hand-to-mouth basis. A couple of English buyers have been in the city this week: but, although they report small supplies in the warehouses at home, they do not feel disposed to buy except at very low quotations.

Paints and Oils.—Trade in general lines of paints in good. Fall supplies are moving actively to various centres in the country and the wholesale houses are busy filling the orders received. Prices on the whole are steady and firm. Linseed oil shows no special activity at present, with prices unchanged at: Raw, 42c.; boiled, 45c., f.o.b., Toronto. Red lead is firmer, merchants quoting $4.50 in casks and $4.75 in 100 lb. lots. Turpentine is quoted at 44c. Window glass is moving freely, and dealers report a strong demand from different districts for supplies.

Provisions.—For all lines of meats there is an active request. Hams and dry salted bacon have found more than a usual ready market, and supplies are going forward in large quantities. The hog market is firm, and there is every indication that prices will be maintained. A New York advice, Sept. 21st, says: "A declining tendency prevailed in the market for hog products. The yellow fever reports from the South continue to have a depressing influence by checking the demand for spot and near-by stuff, both on speculative account and for consumption. Packers and large traders were again selling, while there was little demand except from a few local shorts and scalpers. Bellies were offered more freely at weaker figures, leading to a moderate business, the first of consequence in several days, if not weeks."

Wool.—The situation in the local market is quiet and without change. "The past month" in the United States, according to a correspondent, "has shown large sales with gradually stronger prices. All descriptions are higher, and it seems that the predictions in regard to the overstocking of this country with foreign wools, are not only incorrect, but many now think that wool must go to the importing point, and that orders will go out to buy at the next London sales."

MONTREAL MARKETS.

Montreal, Sept. 22nd, 1897.

Ashes. — There has been quite a little "splurge" in the market within the last few days. Owing to the low prices prevailing for several months past makers have been holding back consignments, and a little recent demand reduced the stocks in store to some eight or ten barrels. The consequence has been quite a jump in prices, and as high as $4 per cental has been paid for good tares of No. 1 pots, though there is now some easing off, and quotations are given at $3.65 to 3 75; seconds are advanced to $3 to 3.10; pearls are still nominal at about $4 40 to 4.50 per cental.

Cements, Firebricks.—Receipts of cements this week have been fairly large, about 11,000 barrels of Belgian and 1,800 English. English makers have put up prices another threepence, but there has been corresponding advance in Belgian makes, which are displacing the British goods in this market, and local quotations, which are $1.90 to 1.95 for Belgian, $2.05 to 2.10 for British. The sale of a lot of 1,200 barrels of Belgian for the West is reported at $1.85. Firebricks are unaltered in price at $15 to 21.00 per thousand.

Dry Goods.—The remainder of the travellers will all be pretty well out on the road this week on the sorting trip. Wholesale dealers generally profess to be fairly satisfied with the business which is doing, and city retailers, who have had a somewhat dull summer, are finding trade better. The majority of houses in this line report some improvement in remittances.

Dairy Products.—Cheese is a trifle easier on spot. The export movement continues to be of a lively character, last week's shipments toting up 78,845 boxes. Four steamers took 37,700 boxes to London, the big new freighter "Montcalm" took 23,900 boxes to Bristol, 14,000 boxes went to Liverpool, and small lots to Glasgow, Newcastle, Aberdeen and Manchester. Butter shipments were also fairly large, namely, 26,077 pkgs., as against 8,593 pkgs. for the same week last year. At the moment cheese shippers seem less disposed to buy, and the market on spot is a shade less strong, though holders in the country are still generally firm in their ideas. Values range from about 9½ to 9⅝c. for fine Western, 9⅜ to 9½c. for Townships, and 9¼c. for Quebec. In butter also the shipping enquiry is slacker, exporters claiming they cannot operate at a profit at present prices, but for local consumption 19 to 19½c. is still being paid for fine creamery; Western dairy is quoted at 12½ to 13c. per lb.

Furs.—It is yet too early to establish prices for new catch of raw furs, and none of the purchasing houses are likely to issue price-lists for another month or so It is thought that mink and skunk may realize a little better figures, and possiblv bear, but that coon may rule lower.

Groceries.— Wholesale dealers report a very fair demand, and some houses show quite a large number of orders booked for despatch before fall freight rates come into force. A somewhat important meeting of the Grocers' Guild was held here a week ago, at which it was decided to add dried fruits, nuts and tobaccos to the list of goods to be sold on a 30 days basis, or one per cent. off ten days. The establishment of a general rule with regard to the sale of sugars was also discussed at length, but it is understood that nothing very definite was arrived at. Prince of Wales, Napoleon and Honeysuckle brands of tobaccos have been advanced a cent. For sugars, refiners still report a good demand, and factory prices are steady at 4 to 4 1-16c for standard granulated; a second quality to compete with imported beet sugars is quoted at $3.70 to 3.75 per cental; yellows range from 3 5-16 to 3¾c. Molasses is very steadily held at 24 to 25c. in a jobbing way for Barbadoes. It is said that offers from American sources have been made for the available stock of Barbadoes here. Syrups are firm at some little advance. No definite quotations are yet available for Malaga raisins, importations of which will be light. Some few lots, by way of Liverpool, are expected here next week, but the main supply will come on the "Bellona," the second and last direct steamer, which is booked to load at Malaga on the 25th inst. This boat is now at Patras taking on balance of the currant orders for this market The high quotations for these goods eased off a little after the "Avlona" left Patras, but recovered afterwards, and a cable received to-day reports an advance of a full shilling in all grades, Provincials being up to 17s., Filiatras 18s., Patras 20s. 6d. and Vostizzas 22 to 24s. In Valencia raisins there is nothing specially new, With regard to Malaga raisins, we should have stated above, that loose Malaga muscatels will be put on the market in California style of 50 lb. package, calculated to cost about 6c. in wholesale lots; the ordinary run of layers will range at about last year's figures, it is expected. Almonds have advanced equal to about half a cent. Packers are again making quotations for tomatoes, generally about 80c. for wholesale lots; peas, 75c., and corn, 60c Nothing specially new is to be noted in teas, for which firm prices continue in all lines.

Hides.—The market is unaltered in any particular, dealers buying No. 1 green hides at 8c.; calfskins, at 8 and 6c. per pound; and lambskins, at 50c. each. Some fair lots of the latter are coming in from the country now.

Hops.—Dealers report nothing new in this line. The figure for new crop rnles at about 15c. per lb. for good quality, with a quiet consumptive demand. Yearlings are dull at 5 to 7c., and old olds nominal at 1½ to 3c. per pound.

Leather.—Some quite heavy sales of dongolas are reported of late at the stronger prices prevailing, and 20 cents is being asked for fine lines. The activity in sole is not so pronounced, but fair sales of No. 2 B.A. are still reported at 22c. Prices are firm in all lines. We quote:— Spanish sole B.A. No. 1, 23c.; do. No. 2, 22 to 23c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 25 to 27c.; No. 2 do., 21 to 23c.; common, 20 to 21c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 21 to 24c.; Quebec do., 16 to 18c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—Business is better in these lines, and consumers are reported as more disposed to anticipate their wants. We hear of a good sale of 600 tons of Hamilton iron for prompt delivery, and some moderate lots of other domestic and Scotch brands; some holders of the latter are asking rather stiffer prices. Terne plates are more plentiful and easier, to import in lots they could probably be bought at $5 50; galvanized sheets are in better supply. Lead is steady at advance, in fact late cables show some slight advance again in Britain. In some quarters there is anticipation of advance in tinplates, some renewal of American demand being expected by British makers. We qunte:—Summerlee pig iron, $17.50 to $18.00; Carron, No. 1, $17.00; No. 3, $16.25; Ayrsome, No. 1, $16.50; No 3, $16.00; Shotts, $17.25 to 17.50; Carnbroe, $16.50, to $17.00, ex-store; Siemens pig No. 1, none; No 2 Siemens, $15.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40;

Low Moor, $5 ; Canada plates—Pontypool, or equal, $2.15 ; 52 sheets to box ; 60 sheets, $2.25 ; 75 sheets, $2.35 ; all polished Canadas $2.40 ; Terne roofing plate, 20x28, $5 75 to $5 90 ; Black sheet iron, No. 28, $2.25 ; No. 26, $2.15 ; No. 24, $2.05 ; Nos. 17, $2 ; No. 16 and heavier, $2.15 ; tin plates —Bradley charcoal, $5.60 to 5.70 ; charcoal, I. C., Alloway, $3.15 to 3.25 ; do., I.X., $3.90 to 4.00 ; P. D.Crown, I C , $3 60 to 3.75 ; do., I.X., $4.50 ; Coke I.C., $2 90 to 3.00 ; coke, wasters, $2 70 ; galvanized sheets, No. 28, ordinary brands, $4 ; No. 26, $3.75 ; No. 24, $3 50 in case lots ; Morewood, $5.00 to 5.10 ; tinned sheets, coke, No. 24, 5½c. ; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75 ; English ditto, $2 ; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal ; ditto three-sixteenths inch, $2.50 ; tank iron, ¼ inch, $1 50 ; three-sixeenths do. ; $2.00 ; tank steel, $1.75 ; heads, seven-sixteenths and upwards, $2.45 to 2.50 ; Russian sheet iron, 9c. ; lead, per 100 lbs., pig, $3 75 to 3.90 ; sheet, $4 to 4.25 ; shot, $6 to 6.50 : best cast-steel, 8 to 10c.; toe calk, $2.25 ; spring, $2.50 ; sleigh shoe, $1.85 ; tire, $1.90 ; round machinery steel $2.25 ; ingot tin, 16 to 16½c. for L. & F. ; Straits, 15¼ to 15½c. ; bar tin, 16½ to 17c ; ingot copper, 12 to 12½c. ; sheet zinc, $5 to $5.25 ; Silesian spelter, $4.75 ; Veille Montagne spelter, $4 75 to 5.00 ; American spelter, $4.75 ; antimony, 8½ to 9c.

Oils, Paints and Glass.—The demand for these goods may be called active. With regard to values the only change for the week is in turpentine, which has been advanced a cent, making the price for single barrels now 66c. per gallon. Dry white lead has eased off a little in Britain from the recent stiff advance, but the situation is still a very strong one ; it is claimed that local prices for ground leads are still below what they should be, and that a further advance of 12½c. will likely be decided on at the regular quarterly meeting of Paint and Oil Association, to be held the first week in October. We quote :—Turpentine, one to four barrels, 46c. ; five to nine barrels., 44c., net thirty days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels.

Castor oil, 9½ to 10c. as to quantity. Leads (chemically pure and first-class brands only), $5.37½; No. 1, $5.00; No. 2, $4.67½; No. 3, $4.25; No. 4, $3.87½; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; window glass, $1.30 per 50 feet for first break; $1 40 for second break; third break, $2.90.

Wool.—Actual business on spot continues light. One or two large Western mill men have been in town within the last few days, but have not apparently been purchasers to any great extent. Holders of the little stock here are very firm in their views, and profess to look for further advance at the next series of London sales, which open on the 28th, when the quantity to be offered will be much smaller than usual. We quote: Capes, 15½ to 17c.; B.A. scoured, 30 to 35c.; domestic fleece, 21 to 23c.; domestic pulled, 20 to 22c. per lb.

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

TEN DOLLARS A MINUTE!

This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the

METROPOLITAN

Life Insurance Co. of New York

Assets, ... $25,592,003 78

The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.

Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,

A. B. POWELL,

BRITISH AND AMERICAN RELATIONS.

A subscriber who had read what we quoted last week on the subject of American ill-will to England and things English, and the curious unfriendly misconception of Canada prevailing in the United States, sends us an article contributed to the Detroit *Free Press* by "Luke Sharp," a Scotch-Canadian author and writer for old as well as new world periodicals. Portions of this are well worth quoting. The title is the Gospel of Hatred:

"I have always held the theory that if the two nations in the forefront of liberty and progress,—the United States and Great Britain—could work together on a friendly basis, the results to civilization would be immense. Wherever either flag is planted, liberty flourishes, and I don't think this can be said of any other nation. Is it unreasonable or unpatriotic, then, to hope for a good understanding between the two peoples? Whether it is or not, I think the fact is that never in their history was there such a chance of complete misunderstanding as at the present moment. Chauncey Depew in a recent interview states that during his last visit to England he was amazed at the entire change of public opinion as regards America, that had taken place since he was across the ocean before. The friendly feeling towards the United States and towards all things American which had obtained in England for many years had undergone a thorough revolution. In this statement Mr. Depew confirms his reputation as a shrewd observer. What he says is true. I have on various occasions written for these columns instances of the friendly feeling that England had for the U.S.A., and I regret to see a subject taken away from me. The cause of this change is not far to seek, and regarding this cause I will lay down two points that bewilder a plain, commonplace man like myself, hoping that someone will enlighten me.

I have lived for many years in the United States, and during that time no man has called me a liar or a thief. There may have been many who thought I was both, but it was not considered etiquette to tell me so, and consequently I was not told. Such forbearance we consider gentlemanly, and life is the smoother in consequence. Now, why should we applaud as "vigorous" a politician highly placed in office who would call a friendly nation a thief and a liar? Why should the cloak of gentlemanliness slip from the shoulders of a politician when he steps from private life into the public service? That's point number one.

I have known and dealt with many business men in the United States, and I cannot recall a single instance where I have been treated with discourtesy. If I imgained I had anything to complain of I was always met by the head of the firm in a conciliatory spirit, and the difficulty was patiently explained, or smoothed away, or amended. A good business man is at great pains to see that all his customers are well treated, and any clerk who acts contrary to this rule of conduct earns a speedy and merited dismissal. Why, then, should the chief clerk of a nation receive rapturous acclaim when he ruffles the dignity of the best customer of that nation? I give it up, and that is point number two.

"I seem to be living in a world of illusions," said Mr. Labouchere, in Parliament the other day, and I sympathize with him. Politics seem to me a region out of "Alice in Wonderland," where the rules of ordinary life and gentlemanly conduct do not apply. I can't understand why bad business is good politics."

M. de Thierry, another outsider, in an article in one of this month's reviews, says:

"Even more significant is the attitude of a large proportion of the English press. Not only does it almost invariably take the side of the foreigner in a dispute involving British interests, but it strenuously denies that there can be another."

During the Venezuela flurry nothing more amazed me than the strict moderation of the English press. While all the papers in the States, with two or three exceptions, were sounding the war-whoop, the English sheets were laboriously endeavoring to understand the American attitude and find out where England was in the wrong. Will this be the case when the next trouble looms up between the two countries, for trouble is as certain as taxes? I think not. Mr. Sherman's despatch on the seals struck dumb all the numerous friends of America on the English press. Since Mr. Cleveland's message there has arisen a new factor in English journalism; a factor which must in future be reckoned with. This is the *Daily Mail*, a one-cent morning paper, run, as one might say, on the American plan. It is bright and enterprising, and has any amount of money behind it; money that it does not need because of its own success. When anything particularly nasty is said about England in the American papers, the *Mail* has it cabled over with a hip-hurrah! and the average Englishman is finding out for the first time what the States is actually saying about him. Heretofore when a few of these pleasant things strayed across, it was taken for granted that they did not represent the opinion of that much-talked-of individual, 'the best American.' Now it has come to be believed that if the best American is not a myth, he is at least entirely included in the subscription list of the New York *Evening Post*, has no political influence, and is entirely a negligible quantity. The instantaneous success of the *Daily Mail* is bound to have its effect on the more conservative papers, and this effect is not likely to tend towards a further lying down on the part of Britain."

A new editor has come to the *Morning Post*, the great fashionable and conservative daily of Great Britain. He is a strong man, needless to say, a Scotsman, who is outspokenly anti-American. James Nichol Dunn won his spurs on the Edinburgh *Scotsman*, the noted paper of the north. Mr. Dunn joined the staff of the *Pall Mall Gazette*. Early in the present year he was made editor of the *Morning Post*, one of the best positions a journalist can attain in England.

The Sherman message gave him his chance, and an editorial which said it was evident that Great Britain would have to fight for her existence against the United States, which seemed resolved to fasten a quarrel upon the old country, rang through the land and was quoted all over Europe. In discussing this engrossing question with Mr. Dunn, he said to me: 'If we are to be thrashed, let us be thrashed; but we are tired of this eternal nagging.'

Meanwhile the *Mail* prints pleasant, peace-producing items, like the following:

"John Bull gets angry, but when it comes to fighting a fellow of his own size, he exclaims: 'Let it be done by any hands but ours.'—San Francisco *Chronicle*.

Whenever Great Britain wishes a row with us she can have it. We are quite ready to annex the Klondike country and all the Canadian accessories.—San Francisco *Call*."

And thus the gospel of hatred is promulgated, and the work of the devil is done much more satisfactorily than Satan could do it for himself.

THE THROUGH TRAFFIC INCREASES.

"A forest of masts" is what citizens of a couple of decades ago predicted would be seen in Owen Sound's harbor. Their predictions would have come true if the state of marine transportation had remained as it was. But the big lake carriers have changed the forests of masts to the smoking funnels, and while Owen Sound's traffic does not show the masts, the tonnage is coming here. The past week has been an exceedingly busy one along the Canadian Pacific Railway docks and slips, the total tonnage received here amounting to nearly 10,000 tons. From Gladstone the steamer "Flint and Pere Marquette, No. 2" arrived in on Friday morning with 695 tons of flour in sacks and barrels. Shortly after noon the "Alice Stafford" came in on her regular trip, and with 685 tons. Saturday morning the "Athabasca's" cargo reached a total of 1,440 tons. On Sunday the big steamer "Madagascar" arrived in with two consorts, the combined cargoes of which amounted to 3,669 tons. Tuesday the "Manitoba" arrived down with 1,479 tons, and this morning the "Alberta" ran up the grand aggregate to the figures stated above. The cost of handling this quantity of freight here totals up to a very nice wage bill, to which may be added that of the out-going liners, which increases the total tonnage handled by the C.P.R. here in their through traffic to about 13,000 tons. Put into old-time sailing vessels, this tonnage would mean a forest of masts.—*Owen Sound Times.*

LONELY REGIONS.

The vastness of Canada is regarded by most of us with pride. But the unknown features of a great portion of it are used as mysteries to conjure with or as reproaches to us for not knowing more about them. In *Scribner's Magazine* in an article by Frederick Irland, entitled, "To the Shores of the Mingan Seignory," in which the vast interior regions of Canada are referred to in terms almost of awe and wonder. Here is part of what he says: "The vast country north of the Gulf of St. Lawrence is, to the uncommercial explorer, the most interesting region on this continent, if not in the world. For nearly four centuries the ships of civilization have sailed by it, yet except at the very water's edge, there has been no intrusion upon it. The rivers which pour forth from every opening in the hills bear witness that the back country is a net-work of lakes and water courses. Ask the Commissioner of Crown Lands of the great Province of Quebec to-day what his department knows of that region, and he will tell you that it is the least known portion of North America, that only a few of the lakes have been surveyed, that two exploring parties have recently crossed the peninsula, that a handful of fishermen's houses fringe the gulf, that for the rest of it, the wandering Montagnais Indians are the only tourists who traverse half a million square miles of territory. Steamers go up the Saguenay. Lake St. John is reached by rail. But away to the northeast is a tremendous tract of country from whence issue streams greater than the Hudson, the headwaters of which no white man has ever seen."

—A Victoria newspaper understands that Mr. Jennings, the engineer, now en route for the Klondike region, is to determine whether an all-Canadian route via the Stickeen River into the Yukon is feasible or not, and whether a railway can be built. The proposed Telegraph-Teslin Lake Railway dovetails in very neatly with the plans of the Teslin and Yukon Transportation Co., organized by some of the most substantial men of Victoria, and at present managed by Frank M. Yorke. They have despatched the steamer "Thistle" with men, material and machinery, and will commence work at once so as to be ready for business by the coming of spring. The sawmill will have a capacity of 10,000 feet per day, and will be first established at Telegraph Creek. The steamers which will be built, it is expected, will be ready for service by June 1st.

—"Up at Stromsburg," says the York, Pennsylvania, *Times*, "a farmer sold his wheat, paid his mortgage and floating indebtedness, bought his wife a new range and sewing machine, took $100 to go to Buffalo and give himself and his poor, tired wife an outing, and had $300 left. When he had finished all the business he wiped his brow with his shirt sleeve, and remarked: 'I voted for Bryan last fall, but I'm d——d glad he wasn't elected.'"

You

know, don't you, that some of the greatest successes in mercantile life have been made by means of the liberal, careful and artistic use of printer's ink. Such being the case does it not strike you that you too may have success if you advertise judiciously? Loosen up. Shake yourself. Don't hesitate further. Times are improving, and are going to be better. Where will you be when you find that some other fellow has captured all your trade through a series of bright CIRCULARS, BOOKLETS and CATALOGUES.

We print Circulars, Booklets and Catalogues. We are printers of everything. We do our work artistically, carefully and promptly. We are reasonable in our charges.

Money in Insurance
WHEN SECURED

ON THE COMPOUND INVESTMENT PLAN OF THE

NORTH AMERICAN LIFE ASSURANCE COMPANY

The special provisions of this advantageous plan of insurance are:

(1) The return as a mortuary dividend of all premiums paid beyond the 10th year, together with the face of the policy should death occur within the investment period selected.

(2) The loan to the insured if desired of all premiums beyond the 10th year, and should death occur after that and within the investment period selected, the full face value of the policy is payable, premium loans, if any, being cancelled.

The North American has a larger ratio of assets to liabilities and net surplus to liabilities than any other Canadian Company.

Pamphlets explanatory of the Compound Investment and other attractive plans of insurance furnished on application to

DECISIONS IN COMMERCIAL LAW.

WRIGHT v. CITY OF TORONTO.—A municipality is liable, under the Ontario Municipal Act, for damages done by closing and deviation of a highway (York Street), to the business of a claimant, a tenant of hotel property abutting on the highway closed, and the municipality is liable to compensate claimant, although no by-law authorizing work was passed; that damage to business was recoverable, though no land was taken, and that claimant was entitled to compensation for future damage caused by deviation of highway according to the municipal arbitrator.

REGINA v. CANADA SUGAR REFINING CO.—By section 4 of the Customs Tariff Act, 1894, duties shall be levied on certain specified goods "when such goods are imported into Canada." By section 150 of the Customs Act, the importation of goods "shall be deemed to have been completed from the time the vessel in which such goods were imported came within the limits of the port at which they ought to be reported," and by section 25 the master of a vessel entering any port in Canada must report in writing to the collector or proper officer the particulars of his ship and cargo and the portion to be landed at that port, etc.; section 31 provides that duties shall not be collected at a port where goods are entered but not landed. Held by the Supreme Court of Canada, that the importation under section 150 is not completed at the first port of entry of the vessel, if the goods are not landed there, but only at her arrival at her port of final destination. Therefore, when a vessel containing sugar entered North Sydney in April, 1895, and reported under section 25, and then proceeded to Montreal, where she arrived on the 4th May, and landed her cargo, the sugar was liable to duty under an Act which came into force on the 3rd May. And further, that the duties attached, notwithstanding that such Act did not receive the royal assent until July, 1895, it containing a provision that it should be held to have come into force on the 3rd May.

RE JOHN EATON CO., Limited.—Petition of Reid, Taylor and Bayne, creditors, for a winding-up order of the above company, and of Edward Hughes & Sons for a similar order. Where there will in all probability arise many questions of a complicated character, such as ascertaining contributories, and as to whether or not the stock of the company is paid up, and probably questions as to the assignment of the policies of fire insurance which could not properly be disposed of under the assignment for benefit of creditors already made, Robertson, J., decided that an order should be made for winding up under the statute, notwithstanding the assignment, and notwithstanding that the desire of the majority of the creditors in point of number and value was for an ordinary liquidation under the Assignment Act. The case of *re* Hamilton Whip Company, previously decided, is distinguishable, as in that case there were no complications, and all the stock was paid up, while here it is certain that there will be complications arising out of the amounts of stock owing to the company by members of the co-partnership. Order appointing provisional liquidator and for winding up with a reference to the Master-in-Ordinary to issue to Reid & Co., the first applicants. Petition of second applicants dismissed without costs.

JOHN BARBER.

Mercantile Summary.

The three gas companies in Buffalo have been sold to a New York syndicate for $5,000,000 cash. It is stated that the new purchasers of the three companies will immediately reorganize them into a single company, with a capital stock of $7,000,000 and a bonded indebtedness of equal amount.

It was not news that gold is to be had in Arizona, but an unusual find is said to have been made of free milling gold ore in the Chocolate mountains in Yuma county in that State. The rush has begun, says a despatch; tents, camp mills and people are arriving at Yuma from up the river, bound for these mountains.

Among the improvements noticeable in Guelph is the new building recently erected by C. Kloepfer, M.P., on Wyndham street, in which the Traders' Bank now has its offices. It is built of red and grey stone, four stories, having ornamental pillars, and is one of the conspicuous buildings of the city. The offices of the manager, Mr. Jones, are finished in quarter-cut oak, and there are handsome plate-glass windows. The scheme of artificial lighting is a combination of electricity and gas.

When La Banque du Peuple went into liquidation it had deposits of $4,345,000. The depositors have received 55 per cent. on account, and Mr. Dufresne says they will receive 10 per cent. more; but the shareholders have nothing to expect. Their fine bank building on St. James street, which cost $324,000 all furnished, is for sale yet, but the best offer made will not realize half that sum. A number of actions have been taken lately in Quebec against debtors of the bank, but in Montreal collections run smoothly, and no actions are thus far entered.

The following failures are reported within the week from Quebec City. J. O. Martel, confectioner, has assigned voluntarily. He became involved through endorsations, it is said, and he owes some $6,000.——L. N. Minguy, previously a dry goods clerk, opened a small grocery last spring. He already asks that his creditors accept 75 per cent. of their claims. ——A similar case is that of J. M. Thibaudeau & Co., who also began in the grocery line only last spring, and have already assigned. In this case one of the partners had some experience; but ability seemed lacking. What they owe is mainly due to their father, a jobbing grocer ——A. Fackney, contractor, has been asked to assign. Liabilities are put at about $3,000, with apparent assets of $4,500.

Writing from London, our travelling agent tells of some fine buildings, both public and private, lately erected. One on the corner of Richmond and King streets, occupied by the Bank of Toronto, and one opposite by the Dominion Saving and Investment Co. are among the number. The building in which the Bank of Toronto has now its office, is built of finely worked stone, with large plate glass windows and a manager's office, handsomely fitted. The Dominion Savings Co.'s offices are also finished in first-class style, with plate-glass front, and Mr. Mills, the manager, has seen to it that his offices are comfortable and well-lighted. The new departmental store of Runnians & Butler, with a frontage of 80 feet on Dundas street, has three floors and basement, and the various departments occupy a surface of 36,000 superficial feet.

A firm of general merchants at Lake Megantic, Que., Marceau & Lemelin, were unfortunate in being burned out in September. They had only $2,000 insurance, and their loss has been calculated at $4,000. Creditors met in Quebec last Friday, when a compromise was arranged at 75 cents on the dollar, 25 cents in cash, and balance spread over a year. Their total indebtedness is about $10,000.——S. H. Milot, formerly a factory operative at Haverhill, Mass., started a boot and shoe store in Three Rivers, Que., in May, 1896. He has just assigned to one of his principal creditors, owing about $1,600.——Joseph Germain has done a small store business for several years at St. Bazile, Que. He was originally a laborer, with little education, and less business experience. His assignment is just reported. Liabilities are about $1,500, about half secured by mortgage.

"The estate will not pay anything on the dollar." Such are the concluding lines of a notification to creditors from the assignee of T. W. Cale, painter, of Stratford. It appears that his creditors met, and that the assignee's statement showed debts and liabilities amounting to $1,085.25. The preferred claims were, rent $150, and wages $37.54. Assets, $337.12, including about $60 worth of goods in bond. Inspectors are Ernest Cale and R. T. Harding. The debtor declined to make any offer of compromise, and the meeting of creditors decided to have the stock sold. "The preferred claims, amounting to $187.54, and costs amounting to $50, will be more than the stuff is worth, and the estate will not pay anything on the dollar." We are told that of the inspectors, Ernest Cale is a brother of the insolvent, while R. T. Harding is a solicitor, and the assignee is the landlord. This arrangement may seem a natural and proper one for these three gentlemen, but the other creditors are not reconciled to getting nothing.

In the Province of Nova Scotia the following late failures are reported: M. B. Anthony, of Berwick, who succeeded to the well-established general store business of his late father, and carried on under the style of T. Anthony's Sons, is offering a compromise of 50 cents on the dollar, on liabilities of $12,000 to $13,000. He has nominal assets of $16,000, of which $9,000 is in the shape of book accounts. This would seem to show over-liberal crediting. Of the liabilities $6,000 is due for money borrowed, largely from father's estate.——H. C. Pickels, New Germany, was brought up as a sailor and became a master mariner, but upon the loss of his vessel, some two years ago, he took up storekeeping; with poor success, however, for he has just had to assign.——T. G. Fraser, grocer, New Glasgow, has now assigned, making a preference of $2,000. ——From Windsor is reported the assignment of J. P. Graham, grocer, to W. H. Mosher, who he preferred for about $5,000, and also makes other preferences, aggregating $7,968 in all. Unsecured liabilities are about $4,000. Nominal assets are given at $14,000. The business was formerly carried on by his father, who failed in 1891, when the business was put in J. P. Graham's name, but the senior has apparently had a control in the management all along. There is quite a sameness about this group, sons succeeding father and then assigning. A sameness, too, in the regularity with which relatives or friends of traders down there are preferred, to the prejudice of ordinary creditors. The laws in the Maritime Provinces are so framed as to tell the merchants of other places: "If you wish to trade with us and give our retailers credit, you do so at your own risk, for we reserve our right in case of difficulty to make preferences that will shut you out or lessen your dividend."

Mercantile Summary.

Geo. Mills & Co., a hat and fur concern in Kingston, Ont., are reported to have made a composition at the rate of 50 cents on the dollar.

The last report from the British Legation in Tokio shows that the total foreign trade of Japan during the past year amounted to £31,543,195, an increase of £3,231,676 over the previous year.

The Royal Hotel in Hamilton, a well known hostelry for forty years, has been leased to Patterson & Paisley, of Toronto. It is said that $20,000 will be spent in refitting the building.

A fire at Teeswater on Saturday morning last destroyed four frame buildings, occupied as grocery, millinery and other shops. Loss perhaps $5,000, mostly covered by insurance Ferguson Bros.'s large block was saved by the firemen.

The number of Government dairy stations in the Northwest Territories was increased during the summer to fourteen. A few of these butter factories began operations in May, but the make of that month was in each case very small. The total production up to the end of August figures up to 361,233 pounds.

C. B. Parker, a general dealer and lumberer, of Cole's Island, N.B., is reported in trouble, and to be proposing a compromise to his creditors. The liabilities are put at $4,800.——Wm. Hanson & Sons, grocers at Fairville, in the same province, are also asking a settlement on liabilities of $3,300.

At Fredericton, last week, crown timber berths were sold at Cow Brook, 3 square miles to T. B Winslow at the upset price of $8 per mile; Little South Branch, 7½ square miles sold to J. H. Barry at $81 per mile; McDonald's Brook, 2 miles, sold to T. B. Winslow at $61 per mile; Head of Jacquet River, 2 square miles, sold to James T. Doyle, at $66 per mile.

The general manager of the Canadian Electric Company, Mr. F. Nichols, had a conference on Saturday last in Montreal with Sir Charles Ross with reference to the water-power scheme in Kootenay, which we mentioned a month ago. The Electric Company is providing machinery for the enterprise, and it is expected that by 1st November electric power from this source will be supplied to Rossland.

Hoffman & Rubin's stock of ready-made clothing and dry goods at St. John, N.B , was sold at auction on Saturday last. The attendance was large; several were present from Nova Scotia, as well as from New Brunswick, points. The stock was stated to be worth $15,000. Bidding was pretty lively for a time. Mr. Peter McSweeney, of Moncton, became the purchaser at $8,400, or about 56 per cent. of the stated value.

The annual general meeting of shareholders in the Great North-Western Telegraph Company of Canada was held at the company's head office, corner Scott & Wellington streets Toronto, at three p.m., on Wednesday, 29th inst. The president and general manager, Mr. H. P. Dwight, occupied the chair, and read the annual report and statement. The directors chosen were H. P. Dwight, Adam Brown, A. S. Irving, Richard Fuller, H. N. Baird, Hon. Wm. Macdougall, Chas. A. Tinker, James Hedley and W. C. Matthews. Mr. Dwight was re-elected president and Mr. Brown, vice-president. The executive officers remain as before. Mr. G. D. Perry, secretary, and Mr. Arthur Cox, treasurer.

The premises of Charles Boucher, a small boot and shoe dealer of St. Johns, Que., having been closed under seizure for rent and municipal taxes, the creditors paid the claims, and have taken possession of the stock.

It is hinted that agents of an American syndicate are trying to get entire control of the nickel properties around Sudbury. The Rockefeller interest, which already holds a number of droperties there, is supposed to be in the deal.

A statement has been issued by the assessment commissioners of London, Ont. The increase in the city's assessment this year is $660,391, of which $230,600 is levied on the street railway company and $86,000 on G.T.R. shops. Apart from the street railway and carshops assessment, the city's assessment for 1898 shows the large advance of $316,600.

A large assemblage of people from Montreal and other places attended on Saturday last the opening of the works at Lachine, which are intended to supply power and light to that city by transmission of electricity. The water was let into the great wheels for the first time. They are capable, it is said, of supplying at least twenty thousand horse-power of energy. Mr. Burland, president of the company, read a statement showing the expenditure of the company. They had no stock for sale, he said, and no bonds to offer. The name of the company is the Lachine Rapids Hydraulic and Land Company.

Our Mr. Oliver wrote on Saturday from Hespeler. "This is a busy and prosperous-looking place. The two large woolen mills of R. Forbes & Co. & A. W. Brodie, are working full time, and considerable additions and improvements have been made to both buildings and machinery. A number of new residences have been required in Hespeler this summer for the growing population. The principa street has been improved both by new buildings and by the placing of new fronts in stores with plate glass windows instead of the old ones. The Merchants Bank branch, of which Mr. F. A. Mann, is manager, has very neat offices on this street, which is named Queen."

Spruce from West Virginia is being landed in New York, at prices which interfere with the sale of New Brunswick spruce in that market. Lumber trade at St. John is extremely quiet at the moment, no demand appearing from either the Old Country or the States. It is stated that the logs rafted on the St. John this season amounted to 167,000,000 feet, which was 27,000,000 feet more than last year. And that there is now 80,000,000 feet in Grand Bay booms, near St. John, with other millions at the mills, and some rafts still to come down. This, it would seem, will be an unusually large quantity to carry over this fall.

Speaking of the Richelieu and Ontario Company's boats for Lake Ontario and the St. Lawrence, an official of the company told a reporter on Saturday that the ideas of the company about the new boats had been materially changed. It was first intended that they should ply between Montreal and Toronto, and take the place of the present steamers, which were to be used as observation boats. To fill the requirements of the Montreal-Toronto route the boats had to be sufficiently short in length to run the currents of the rapids, sufficiently narrow to drop down the canals, and sufficiently wide to accommodate at least five hundred passengers and at the same time sufficiently strong to stand the heavy weather of the lakes. It was found impossible to combine all these qualities, so the boats will run east only as far as Prescott, where the observation steamers will convey the passengers the rest of the way to Montreal.

Mercantile Summary.

THE new Consul-General for the United States at Montreal is General J. L. Bittinger, of Missouri, who took over the duties of the consulate on the day that Dr. Anderson left.

ONE of the subjects of discussion by the Association of Architects of the Province of Quebec, now meeting in the ancient city, is the tall buildings of New York and other American cities.

THE stocks of clothing at Toronto and Belleville belonging to the estate of E. D. Gough, whose failure was noted in these columns before, will be sold by Suckling & Co., at their warerooms in Toronto on Wednesday, 6th inst. E. J. Henderson has given instructions that this sale be held.

THE Montreal Transportation Company is building several new barges, steel frames and hulls, with wood sheathing, at Kingston, with a carrying capacity of 50,000 bushels of grain each, at a draught of 11 feet. At the present canal depth of nine feet 35,000 bushels can be accommodated in each.

Magnetic sand, found upon the island which partly encloses Toronto Bay, has been examined by an expert of the Ontario Bureau of Mines, whose report is more encouraging than was expected. The sample examined contained 14 lbs. 3 oz. of sand, and out of that 20 oz of iron were taken, which is 9 per cent. Now 9 per cent. is considered a good percentage.

ONE of the largest failures we have to chronicle this week is that of Quigley & Co., boot and shoe merchants, at Guelph. This firm commenced trading in the Royal City in 1893, and have also lately had a branch at Berlin. The firm's trouble has come about, we understand, owing to their bankers having ceased to give them further accommodation. An assignment has been made, with liabilities totalling $10,000 and unknown assets.

IT is intended to hold, on Wednesday next, 6th instant, in the Board of Trade rooms, Toronto, a meeting of Ontario lumbermen, Col. Davidson in the chair. On that occasion is expected the report of a committee, consisting of Messrs. Scott, Bertram, Rathbun and Waldie, appointed by the lumbermen at their meeting last month, to present to the Ontario Government the resolution passed, and take such further action as seems advisable in behalf of the lumber industry of this province. Reduced fares by rail are being arranged for the occasion, we understand.

ALL accounts agree that Ottawa is one of the busiest and most actively prosperous places in Canada at present. Commercial travellers say that merchants there are turning over their stocks rapidly. The big Fair of last week attracted crowds to the capital, and the passenger traffic then was probably the best the railways running into Ottawa have ever had. It is estimated that during the week they brought in fully 40,000 passengers, the C.P.R. bringing about 20,000, the Canada Atlantic & Parry Sound 15,000, and the Pontiac Pacific and Gatineau Valley roads about 5,000.

Mercantile Summary.

WILLIAM GLANVILLE, brickmaker, Palmerston, and W. T. Pillow, grocer, Goderich, have assigned.

AN Ottawa despatch mentions the new Canadian postage stamp, which has been approved by the Postmaster General. There is a portrait of the Queen. The corners of the stamp will be decorated with maple leaves. They are expected to be issued about November of this year.

A FOOLISH examination with a lighted match of the interior of an acetylene gas generator last week, resulted in an explosion that blew out the big plate glass window in the front of the store No. 3941 Market street, Philadelphia, and Edward F. Tindall, who held the match, was seriously burned about the face and hands.

WHEN a man cannot pay wages to the men in his employ, there is not much chance of outside creditors receiving their due. M. J. Zingdorff started a sawmill at Wardner, B.C., sometime ago. Last week he made an assignment, which action was rendered necessary owing to his men bringing suits for wages. He owes workmen $1,100, but has book debts amounting to $800, and about $500 in stock.

D. PRINZEN GEERLINGS, a Government official of Java, and formerly professor of chemistry at the University of Amsterdam, announces the discovery of a simple method of converting potato starch into sugar. He has lodged his description of the method with the French Academy of Sciences, so as to secure priority for his invention, although he is not ready to make the details public. If this alleged discovery turns out well, there is an economic revolution almost in sight.

THERE is a big advance in the freight rates for salmon ships, says a Victoria despatch. The first ships were chartered at 27s. 6d., others at 31s. 6d., and it is now (Sept. 25th) announced that the "City of Venares," the most recent charter, is at 37s. 6d.

THE financial difficulties in which Edward Horseman, hotel-keeper, London, now finds himself are due to his inability to pay current demands, and at the same time keep up interest payments on a mortgage for $8,000, given some years ago when he purchased the Grigg House in that city. He bought out J. Jennings in 1886. Then he took over the first-mentioned hotel at a valuation of $12,000, upon which he paid $4,000. He has now assigned. We observe that he has since been brought up before the court on a charge of buying $170 worth of goods, knowing himself to be insolvent.

FROM Quebec comes word of the failure of Leger Brousseau, printer, owing nearly $16,000, and showing assets of only $5,200. This looks strangely in print, but it can easily be paralleled in Ontario, where printing offices have been started and failed; the partners afterward starting separately, got credit and compromised; failed on the compromise, their assets going mostly to the landlord or to pay preferred claims; up the insolvents come again, however, perhaps in somebody else's name, and are given credit for paper, presses, type, as freely as if such goods cost nothing, and as if other customers of the mills and type foundries did not have to pay 100 cents in the dollar. Mons. Brosseau owes $5,168 to two type foundries, and about $1,000 for paper.

DEBENTURES FOR SALE

$150,000 Bonds of the Victoria Rolling Stock Company of Ontario, Limited.

Payable from one to ten years, bearing interest at 4 per cent. per annum, payable half-yearly. For sale to yield 4½ per cent., amounts and due rates to suit purchaser. Bonds $1,000 each.

For further particulars apply to

OSLER & HAMMOND,
18 King St. West, Toronto

COLLINGWOOD DEBENTURES

Tenders are invited for the purchase of $7,000 Debentures Town of Collingwood, as follows:

First—$2,000 under authority of 47 Vic., Cap. 49, Ont. Stat., repayable Dec. 1, 1916.

Second $5,000 under authority of 54 Vic., Cap. 65, Ont. Stat., repayable Dec. 1, 1919.

All to bear date Dec. 1st, 1897, interest at 5 per cent. payable half-yearly, on 1st June and December, at Bank of Commerce, Collingwood.

Successful tenderer to pay at par in Collingwood, and cost of forwarding Debentures.

Whole to be issued in seven Debentures of $1,000 each.

Tenders will be received up to November 4, 1897.

A. D. KNIGHT,
Town Treasurer.

Collingwood, Sept. 22, 1897.

Suckling & Co.

We are instructed by **E. J. HENDERSON,** Assignee, to sell by Auction at our Warerooms, on

Wednesday, October 6th

AT 2 O'CLOCK P.M.,

The Toronto and Belleville Stocks belonging to the estate of

Total	$9,755 88

Terms:

½ cash, 10 per cent. at time of sale, balance at 2 and 4 months, bearing interest at 7 per cent. per annum, and secured to the satisfaction of the assignee.

Both stocks are in remarkably good condition, the Queen Street stock being almost new.

The Stock and Inventories may be inspected at the premises at Toronto and Belleville, and Inventories at the office of the Assignee, 32 Front St. West, Toronto.

THAT the strike of the engineers was a serious thing for the ship-building interests of the River Clyde is shown by the falling off in production of tonnage in August. In that month only ten vessels, aggregating 8,000 tons, were launched, as against an average of twenty-five vessels, with an average tonnage of 45,000.

THE satisfactory news that the Dunsmuir coking ovens at Union, B.C., are to be increased in number to 200, producing in all double the present monthly aggregate, is given by a B.C. paper, the *Critic*. It means not only an increase of at least 60,000 tons a year in the local and profitable use of the Island coal, but also a large increase in the available supply of a fuel absolutely necessary for precious metal ore smelting and refining.

AFTER a ten months' cruise off the Japan coast, Coffee Islands, and the Komandorski Island, the sealing schooner "Casco" brought to Victoria yesterday news that seals are very scarce and scattered. Catches have consequently been very small None of the schooners running to the Copper Islands have taken more than 300 skins this year. The cause of the scattered condition of the herds is attributed to the abundance of food. The "Casco" took altogether 1,064 skins, of which over 800 were taken on the Japan coast.

FROM the Kobe, Japan, *Chronicle* of September 4th, we learn particulars of a banquet given on the 2nd by the Chamber of Commerce of that Japanese city to the Canadian Trade Commissioner, Mr. George Anderson, of Toronto. A hundred gentlemen were present. Mr. Anderson gave his audience much information as to the climate and productions of Canada, also as to her commerce and possible extension of it with Japan. In the course of his address he paid a tribute to the intelligent zeal of Mr. Nosse, the Japanese Consul General in Canada.

W. D. COATE, who had a drug store at Rat Portage, gave a chattel mortgage on his stock. This has now been foreclosed, and the stock will be sold.——Not many failures are reported in Toronto this week, and none of those that are very important. Miss Pattinson had a few hundred dollars several years ago, which she invested in a millinery stock. Business has not been any too good with her, and now the stock will be sold by bailiff.——In the autumn of 1894 Sullivan Bros. commenced a shoe business with very little capital, and gave a chattel mortgage to their principal creditor. This has been foreclosed, and the stock will be sold on the 11th inst.

Position Wanted By man; expert accountant and office manager, thoroughly experienced in correspondence, credits and management of sales. Reliable and energetic; age 29. Exceptionally good references, and satisfactory reasons for wishing to make change. Address Box 459, Monetary Times, Toronto.

Notice to
LUMBERMEN

A meeting of the Ontario Lumbermen will be held in the Board of Trade Rooms, Toronto, on WEDNESDAY, OCTOBER 6, 1897, at 1.30 p.m. (chair to be taken by Col. Davidson), to receive the report of Messrs. Scott, Bertram, Rathbun and Waldie, the committee appointed by the lumbermen at their meeting held in Toronto on August 19th to present to the Ontario Government the resolution passed at that meeting, and take such further action as may be deemed advisable in behalf of the lumber industry of this province.

A cordial invitation is extended to all lumbermen to attend.

Provided the attendance shall reach fifty, reduced fares will be granted by the G. T. and C. P. railways. Delegates will purchase a single ticket to Toronto, and get from their local railway agent a receipt on a standard form for the price of same. This receipt, when signed by the Secretary at the meeting, will entitle the holder to a return ticket at one-third fare.

EDGAR A. WILLS,
Secretary.

Toronto, Sep. 30, 1897.

FROM Dauphin, Man., comes the report that A. Adams & Co., general dealers, have made an assignment. The firm has been in business there for several years, but have apparently made no headway. In fact enquiries among the trade in Montreal show that they have been very slow pay, one firm having had to wait two years for a settlement with them. ——At one time Robt. Crawford, grocer in Winnipeg, was connected with the C.P.R., but had the misfortune to lose a leg. So a subscription was taken up, which netted enough to star him in business. Lack of experience has resulted, as it generally does, in his making a failure and an assignment.

THE Premier, in his speech on visiting Halifax yesterday, dwelt shrewdly on a subject of surpassing interest to the people of that city, namely foreign trade. On this subject he said:—"The policy which was inaugurated in 1879 had for its object to keep trade within Canada. Let me submit to you, you gentlemen of the Maritime Provinces, you of the city of Halifax, that the only policy which can be successful is the policy which will look for trade with nations abroad, and above all things, with the Mother Country, the richest and wealthiest of all nations. The policy which we have inaugurated, the policy of the present Administration, is that we shall seek better markets in the Motherland, in Old England. This we have endeavored to do."

THIS week a conference was held between the authorities of Canadian railways and delegates from the various bodies of commercial travellers in Canada. The main subject discussed, although there were others, was the terms upon which excess baggage of these travellers should be carried by the railways. The roads now allow three hundred pounds of baggage free; after that a rate is quoted per hundred pounds graded according to the length of the haul. This rate has long been felt to be a grievance. The four great associations sent representatives as follows: The Dominion Association—Hon. Mr. Rolland, president; Messrs. H. W. Wadsworth, secretary; T. Paton, J. E. Wright, W. Brewster, George Sumner, James Coyle. Canadian Travellers' Association, headquarters at Toronto—Messrs. R. J. Orr, president; C. E. Kyle, first vice-president; M. C. Ellis, second vice-president; J. C. Black, W. Caldwell. Western Association—Messrs. W. Gray, president; S. Munro, treasurer; Alfred Robinson, secretary; J. Hooper, first vice-president; H. S. Wright. North-Western Association—Messrs. L. O. Johnson, president; A. S. Binns. Of this conference or convention the Hon. Mr. Rolland was elected president and Mr. Alfred Robinson, secretary. The Grand Trunk, Canadian Pacific and Michigan Central were represented.

"How I dislike the word 'economy,'" said a man to the Detroit *Free Press*. "On what grounds?" "Because it is such a queer thing. The world condemns us if we don't practise it and despises us if we do."

—The ruling instinct is strong in a thrifty housewife. "My dear," said the husband who had to tell his wife that he had failed, "the wolf is at the door." "Tell him to wipe his feet," said she, absently.—*Youth's Companion.*

—The second series of excursions under the auspices of the Merchants' Association of New York began on one September Friday and continued one week. This territory includes everything outside of a radius of 100 miles from New York, extending from the New England boundary lines and the seacoast as far west as Buffalo and Pittsburg.

Debentures.

Municipal Debentures **bought and sold**, also Government and Railway Bonds. Securities suitable for Investment by Trustees and Insurance Companies and for Deposit with the Government, always on hand.

THE SITUATION.

Just at the time when England, on the urgent solicitation of the United States, had agreed to listen to the evidence of experts on the question of seal life, under the conditions created by the Paris award, the Republic proposes to make two other countries, Russia and Japan, parties to the conference. To this England demurs, and she may possibly withdraw, unless the conference be confined to herself and the United States. Because Russia and Japan are interested in the seal question, it is contended that they have a right to be consulted. No doubt they have their rights, but they took no part in the Paris arbitration, and as retention or modification of that award is the issue ultimately to be decided, the decision must rest with the original litigants; these two other nations, merely because they have some interest in the preservation of seal life, cannot reasonably become parties to the international arbitration, in any capacity, at this stage. There must be no packing of the jury. Russia's interest in the seals is subject of a special agreement with England; the two interests, those of Russia and those of the United States, have hitherto been treated as distinct, and in the new phase of the contention of the Republic, which looks to the virtual abrogation of the Paris award, England and Canada have a right to object to anything that savors of a packing of the jury.

As to whether the United States has sent to Spain what amounts to an ultimatum, on the subject of the Cuban rebellion, conjecture has for some time been busy. President Cleveland while performing the duty which international law imposes on a neutral nation to the best of his ability, though not with any marked degree of success, took occasion to sound a warning note that, unless peace were restored, the time might come, and would come, when American intervention would assume an active form. The Cuban rebellion has nevertheless been promoted and materially aided by American citizens in violation of their own neutrality law of 1818; and if this succor had not been given, it is probable that the rebellion would have collapsed long ago. What is the sort of intervention at which, in a possible contingency, President Cleveland hinted, and which President McKinley recalls and reaffirms? Half a century ago President Polk authorized Mr. Buchanan, then American minister at Madrid, to offer $100,000,000 for the island of Cuba. Mr. Polk was under the spell of the slave power, which expired with Lincoln's proclamation; but has the national policy with regard to Cuba really changed? If slavery is dead, the Jingoes survive, and it is not possible to doubt that they would welcome the annexation of the island as eagerly as the slave power, in the day of its triumph, would have made the acquisition, if it could. If, on the whole, the duty of a neutral is fairly well performed by the Washington Government, this does not prevent a secret design ultimately to capture the island by some means.

On the return of the Canadian steamer "Diana" from Hudson Strait, a telegram from Newfoundland purports to give as the result of the voyage an unfavorable report on the commercial value of the Hudson Bay and Strait for a steamship route, "owing to fogs, shoals, icebergs, want of lighthouses, and the country being bleak and barren, with no communication to civilized regions." This is, of course, not the language of an official report, and it may not be a foretaste of the coming official report. Some of the evils in this short catalogue are cosmic and incurable, others such as the want of lighthouses can be overcome; even the removal of shoals, unless they be too formidable, may be possible. That icebergs are plenty in the Straits is no news. No conclusion can be drawn from this bald, non-official account of the obstructions met by the "Diana." The principal difficulties to be encountered are in the Strait of Hudson, and as the "Diana" made six passages through the Strait, the information she can give of the navigation of the water ought to be valuable.

The resolution of Mr. Sifton to go to Klondike at this season of the year, and in the present condition of the means of communication, is one of those heroic freaks which make lookers-on hold their breath, and from which the most that can be hoped is that the gain may balance the risk. The risk is personal; the gain, if any, will be public. A safe voyage, going and coming, there is reason to fear, will tend to encourage fool-hardy imitation, with results which must include more than the average of casualties. If there will be a distinct advantage in the Minister of the Interior seeing the true state of things at Klondike, there will be a still greater in ascertaining, on the spot, the means of access and escape. Let us hope that he may not live to regret that he did not content himself with seeing, through the eyes of others the conditions to which the Klondike miner must submit. One good thing the Government has done in keeping political influence at bay, in the Klondike; one most dangerous proposal, that it sanction a corps of armed miners, has been negatived. Such a corps would be regarded as a defiance of other miners, and both classes with arms in their possession, one carrying them openly and the other secretly, would have been sure to come into collision. If Mr. Sifton learns the true condition of the White Pass, to which the Government has apparently given a preference over the Chilcoot route, and does the best that can be done to get over the difficulties there, he will have earned the right to a triumphant return, without going further, and there might be wisdom in taking this course.

Whether the protest of the London bankers against the Bank of England agreeing to exercise the option, permitted by its charter, to hold one-fifth or any other portion of its reserve in silver against its note issue, will prove effective, has been the chief topic of interest in Great Britain for a week. The Government is, or was, at the back of the bank; the proposal is not without its political element. France is apparently a party to the compact, and the United States completes the trio. The Bankers' protest is not a reasoned protest, which gives the grounds of opposition, as protests sometimes do; in form it is merely an expression of dissent, but in reality it is an appeal to that preponderance of opinion which deprecates any move which might interfere with the supremacy of the gold standard. If silver may be held against one-fifth of the bank's circulation, it follows that it may be used to redeem that proportion of the notes; and this implies an alteration of the law which restricts the tender of silver to £2. Are the banks concerned in the arrangement to undertake to buy all the silver offering, at a fixed price? If not, where is the guarantee that the price can be kept up? If yes, might not Germany, supposing her to remain outside the arrangement, use the new conditions thus created to draw gold from England, France and the United states? Everything would depend upon the possibility of making the demand for silver equal to the supply. Is this possible without the co-operation of Germany?

Two colonial items this week in other parts of the Empire are of interest. New South Wales has offered to send 100 Lancers to India to aid in bringing the tribesmen to reason; the news from South Africa is that the South Africa Company has demanded £3,000,000 from the Government of the Transvaal for inciting the natives against the company and supplying them with arms. Though the offer of New South Wales could not be accepted, there being a feeling that British and native troops must themselves do the work of pacification, it still has its significance in attesting the strength of the bonds of empire. The South Africa Company's demand, if it has really been made, is startling. Much will depend upon the date of the alleged treachery of the Transvaal Government. Did it occur before or after the Jamieson raid, or both before and after? Is the demand, in any sense, intended as an offset to the indemnity claimed by the Transvaal for the Jamieson raid? If the claim of the company be well founded, is it to be pushed to extremities? There must be some connection between the unsettled state of things in South Africa and the large purchase of horses, on British account, for use in that country, now being made in Brazil.

By agreement between Great Britain and the United States, come to soon after the close of the war of 1812, the number of armed vessels which each might keep on the lakes, was one on Lake Champlain, one on Lake Ontario, and two on the upper lakes; of these the armament was to be restricted to one eighteen-pound gun each. Up to the present time, this agreement has been observed on both sides. The American Government, when importuned by shipbuilders, has, more than once, refused to permit even the hulls of vessels of war to be built at a Lake Erie port; and when for their armaments it was proposed that they should pass out of the lakes to an Atlantic port. This happened when the vessels had to be built somewhere, under contract with the Government. Now, the "Yantic," a war vessel of 900 tons, is to be sent through the canals and to receive a rapid-firing battery at Erie, Pennsylvania, her ostensible use being as a trainingship. If to build the hull of a war vessel at a Lake Erie port, would have been a violation of the treaty, and the Washington Government held that it would, what about putting a rapid-firing armament on board a war vessel at Erie? Can this be made to square with the treaty? The United States has frequently been urged by Jingoes to denounce the treaty, but she has not done so. The present move looks like an attempt to steal a march on Canada and Great Britain. An explanation will be in order. Either party to the treaty is at liberty to change its policy and reclaim the liberty of unlimited armaments on the lakes, deplorable as such a change would be; but neither party is at liberty to violate the treaty, so long as it continues in force.

When the city council of Toronto decided to permit an extension of St. James cemetery, it ought to have been foreseen that complaints of injury to adjacent property would be made, and law-suits probably began, to recover damages. This probability is now looming up into something like certainty. Some damages will almost certainly have to be paid; and as the city gets several acres of hillside land between the two sections of the cemetery, the damages will be equivalent to purchase money, for what was offered as a free gift, or bribe, as the price of municipal consent to the extension. Any damage now due will be less than it would before science had laid two bogies which in popular imagination haunted cemeteries: a cemetery was popularly supposed to befoul the atmosphere, and to corrupt the adjacent wells. It is now known that neither one result nor the other is produced. But it remains true that a cemetery is an unpleasant neighbor, whose company few desire, in life, perpetually to court.

There is probably nothing in the rumor that the United States has made, or is about to make, overtures to Denmark for the purchase of Greenland. A denial comes from Washington. The story may possibly have originated in the formal claim which Canada is reported to have made to the shore of Cumberland Strait. That strait became British by right of discovery, and the fact that certain American whalers have for some time used the shore for their purposes, would not effect a transfer of ownership. Cumberland Strait is on the opposite side of Davis Strait, from Greenland. The whale fishery was valuable two centuries ago, and then it was chiefly in the hands of the Dutch; English whalers were the successors of the Dutch, and then followed a few American whalers, who have finally sold out their Cumberland Strait huts to British subjects. That is the whole story, and it is out of the question that the United States should have acquired any territorial rights in Cumberland Strait.

OUR MINERAL HERITAGE.

A visitor to Manitoba and the North-West, who proceeds thither from Montreal or Toronto, seeing the country after a lapse of years, cannot but be struck with the developments on the way. Though the region from the Ottawa River round the shores of Lake Huron and Lake Superior, and almost all the way to Winnipeg, is but a series of rocks and barren hills and endless lakes, there has been discovered mineral wealth, the development of which is assuming considerable importance. Mineral discoveries, as is well known, are often of the most delusive character, and endless time and large amounts of money have been spent over them in Canada and in other countries. It is only here and there, and in a small percentage of cases, that solid results have been attained, as is the case with nickel at Sudbury, and gold at the Lake of the Woods. In the latter case, after working for many years with little profits and large expenditures, satisfactory results seem to be in sight. Several mines there, notably the "Sultana" and the "Mikado," have reached the stage where very good returns, in proportion to the machinery and labor employed, are being realized.

These mines are entirely different from such gold developments as are taking place in the Klondike, where men, with neither machinery nor much skill, can pick up gold in river beds, too often spending the proceeds in riot and dissipation. The gold developments at the Lake of the Woods are of a similar kind to those of gold mining in Nova Scotia, where numbers of men are regularly employed, and a population of skilled workmen is being built up. The splendid water power at Rat Portage and Keewatin has been utilized to drive the great flouring mills and lumber mills there, and two bright-looking and prosperous-looking towns have sprung up within the last ten years, with all the evidences of active business and growing population about them.

As to indications of gold on the Michipicoten River, it is too early to say anything definite about them. But as indicating the value of mining productions, as compared with those of the farm, it may be said that the net annual result of the operations of the two mines above named will be fully equal to that of 35,000 acres of farming land. Of course, such a quantity of farming land would give an enormously increased employment to labor, and leave far more of indirect value to the country. But so far as mere monetary result is concerned, the above is a fair statement of fact.

AGRICULTURAL DEVELOPMENT IN THE WEST.

As is well known, there is little of agricultural development met with until Winnipeg itself is reached. It is from the Red River westward that the vast plains extend which are now being brought into cultivation. Much of the land within twenty or thirty miles of the city lies low, and requires draining; consequently there are comparatively few evidences of settlement until that distance from the capital has been reached. But whereas so short a time as fifteen years ago the vast plains which stretch between Winnipeg and Portage la Prairie (a distance of 60 miles) were almost solitary, there are now a large number of well cultivated farms and good farming homesteads within that space, with every evidence of growing prosperity about them. At this time of the year, in every part of the settled country, the stacks of grain meet the eye in every direction—as pleasant a sight as any well-wisher of the country could desire to see. After a point, say, forty miles westward from Winnipeg, on the main line of the Canada Pacific, has been reached, settlement becomes almost continuous, and the eye is gladdened with a large extent of wide-spreading, open country; vast plains being covered with crops or herds of cattle. It is well recognized that the district around Portage la Prairie is one of the finest in the whole North-West, and evidences of growth are clearly seen in the improved style of homesteads, the fencing, and particularly in the much larger number of cattle than used to prevail formerly. From thence the proofs of growth and prosperity meet the eye on every side. Whether a traveller proceeds in a north-westerly direction along the line of the Manitoba and N.W. Railway, or due west by the main line of the Canada Pacific, or whether he reaches out to the great undulating plains of Southern and South-Western Manitoba, there is but one story to tell, and that is about more land being taken up year by year, more cattle, better buildings and fences, more money in circulation, and evidences on all sides of growing wealth and prosperity.

This year will, undoubtedly, give Manitoba and the adjacent territory a decided impetus in the path of progress. The country has been favored in all its parts with a remarkably good harvest, and there was neither frost, drought nor hail to injure it; the crops of wheat, therefore, though only an average in quantity were of an unusually high grade as to quality. By far the larger part of the wheat this year will grade No. 1 hard, which, as is well known, is about the best in the world, and readily commands the best figures in leading markets. This will produce much better results, and cause an absence of those disputes which have so often arisen in connection with frosted or rusted wheat in former years.

The price of wheat has advanced to such an extent that the farmers of Manitoba will realize almost double what they realized for their crop two years ago. And they are very wisely threshing out their yield and carrying it to market as fast as possible.

Nothing was more striking as the train proceeded on its way across the settled plains, than to see the steam threshing-machines at work in all directions, and also the teams loaded with wheat proceeding to the towns and villages where there were elevators; the Canadian Pacific Railway is putting forth all its strength in order to move the crop out of the country, so as to enable money to be realized from it. Cars by the thousand are engaged in this vast operation, and never in the history of the railway were such quantities moved in so short a time as has been done lately.

The result of all this farming business is visible in the improved appearance of villages and towns. These are all growing in substantial appearance, and evidences of a living and active business are apparent. In the town of Brandon there is not a house or store to let.

Winnipeg has grown very largely since a former visit of some seven years ago; but the city has *improved* to a greater extent than it has grown. All the requirements of modern civilization are to be met with there, just as in the larger cities of the east.

The present year will almost certainly see a large reduction o mortgage indebtedness in Manitoba, as well as indebtedness for implements and store goods. Many a long standing debt will doubtless be paid this year, and many a doubtful debt made good. Already, outstandings which had been written off merchants' books have been paid in full, and so early as this there have been instances of farmers selling enough product to pay all their liabilities and leave large sums at their credit; this year's crop being equal to the whole value of the farm, as it was reckoned a year or two ago.

The evils that were encountered in doing business in Manitoba, viz., excessively long credit, doubtful payments, constant renewals, and a large percentage of losses, are gradually disappearing, and the province is assuming the character that the older Provinces of Ontario and Quebec have long borne for comparatively solid and steady business.

In Manitoba, however, there is room for an immense accession of new population. Three times, or five times, as many people as are in it now could be established prosperously.

The country around Winnipeg, if drained, would be about the finest district in the province, and thousands of farmers could settle in it. The people of Winnipeg themselves would find it in their interest to promote a large system of drainage. They could well afford to pay one half the cost out of their own funds, in consideration of the improvement it would bring to the business of the city.

Doubtless such an enterprising body as the community of Winnipeg is will give this weighty matter the attention it deserves.

DOMINION TRADE RETURNS.

There was a moderate increase in the trade movement in Canada for the month of August, as compared with the same month last year, the gain amounting to $1,000,000. This gain has been made in both imports and exports. For August, 1897, the imports amounted to $11,546,225 as compared with $11,083,875 in August, 1896, or an increase of $462,350. There was, however, a decrease in the duty collected of $124,791. The discrimination in duties framed in favor of countries which have legal claims to the advantages of the preferential clause is evidently having a marked effect upon the revenue. For while in the two months of the fiscal year there has been an increase of more than $4,000,000 in volume of trade, and a decrease of $182,962 in revenue. The returns from Vancouver, B.C., were not, however, received by the department during the past two months, and when obtained will somewhat diminish the deficit. The importations of free goods during August of the present year were valued at $5,656,465, as against $4,709,775 last year. The increase was made up principally by a larger movement in coal, coffee, rubber and tea. We append a table comparing the imports of the principal commodities ,—

PRINCIPAL IMPORTS.

Dry Goods—	Aug., 1897.	Aug., 1896.
Cottons, including cloths and thread....	$333,433	$342,557
Cotton, waste and raw (free)	115,531	95,055
Fancy goods..........................	188,127	180,083
Hats, caps and bonnets................	151,458	139,577
Silk Goods	266,333	275,911
Woolens, cloths, carpets, yarns, knit goods	1,019,451	1,018,765
Wool (free)	77,307	74,233
Furs and manufactures................	36,921	32,812
Books and pamphlets..	66,489	62,608
Breadstuffs, grain, flour and meal	74,430	112 516
Coal, bituminous......	182,107	174,800
" anthracite (free)	965,677	664,452
Drugs and medicines	101.881	97,440
Earthenware	66,660	59,879
Metals (free)	263,368	155,330
Iron and steel manufactures............	1,008,518	751,227
Leather and manufactures	128,229	94,098
Oil and paints........................	134,419	143,189
India rubber and gutta percha	181,099	106,926
Provisions............................	102,367	44,705
Sugar..................	155,900	1,144,131

The exports during August, 1897, were valued at $13,768,834 as compared with an exportation of products valued at $13,173,562 in the same month of the previous year. We append the following statement of the movement :

	August, 1897.	August, 1896.
Produce of the mine	$ 848,612	$1,281,135
" fisheries	735,143	824,395
" forest	3,928,022	4,033,312
Animals and their produce	4,231,319	4,608,025
Agricultural products	1,379,404	2,086,036
Manufactures	842,142	867,056
Miscellaneous articles	23,802	23,593
Totals.......	$11,988,444	$13,723,552
Bullion	24,103	21,940
Coin	1,161,015	23,342
Grand total	$13,173,562	$13,768,834

MR. McKENNA'S INTERPRETATION ADOPTED.

The United States Treasury Department has accepted the interpretation of the Attorney General in regard to section 22 of the new tariff law, the substance of which we reported last week. The collector of customs at Philadelphia has been informed that a cargo of manganese ore, which recently arrived at that port from Chile in a British vessel is not subject to a discriminating duty of 10 per cent. The Department will take similar action with respect to the invoice of tea recently arrived at Chicago from Japan, by way of Vancouver and the Canadian Pacific Railroad. It is probable that the Department will issue a circular letter of instructions to collectors covering generally the subject of discriminating duties under the new law. Importers of raw silk are naturally jubilant that the ten per cent. discrimination provided for in the Dingley bill has been construed in such a way that they can utilize the superior means of transportation of the Canadian roads without paying tribute to the taxgatherer.

ONTARIO MORTGAGE LOAN COMPANIES.

Continuing our reference to the return made to the Ontario Government by the mortgage loan companies of the province, we remark that the return for 1896 has emanated from the office of the Registrar of Loan Corporations, whereas previous ones were issued from the Bureau of Industries. The official first named had the new duties placed upon him under law passed only last session. The compilation, therefore, of this return is likely to have been done in the main where its predecessors were. It contains additional information to some previous pamphlets of the kind, and will, we trust, in time contain summaries which will prove of great service to the reader. Until these summaries are furnished, the effort to arrive at conclusions based on the figures must prove both laborious and tedious. We shall do our best to draw some further lessons from the figures furnished. Meanwhile we acknowledge that in the twelfth line of our previous article an error was made in saying that the Guelph and Ontario company had sent in no return. It was the Hamilton Homestead Loan and Savings Society which should have been mentioned in this particular. Irregular binding of pages 60 and 61 misled us.

Substantially, the companies reporting last year are the same as those reporting in 1895, ninety in each list: but in the latest return separate lists are made of (1) the regular loan companies, (2) the newer sort of building societies, (3) the loaning land companies, (4) the trust companies. There are 56 of the first ; 22 of the second ; 8 of the third ; 3 of the fourth. It is a step in advance to have in this return the regular mortgage loan companies placed in a group by themselves, though the results of their business for 1896 cannot conveniently be compared with those of 1895.

A noticeable feature of the liabilities of the regular mortgage loan companies to the public is the reduction in the amount of money borrowed abroad. This exceeded $50,000,000 in the years 1893 to 1895, but was reduced by the close of 1896 to $41,370,000 of debentures payable in Britain and $4,023,000 of debenture stock. Indeed, the total liability of these companies to the public, which in some previous years exceeded $80,000,000, is now down to to $75,215,000.* At the same time with this lessening of obligations abroad there was an increase of a million dollars in debentures issued in Canada. The movement in debenture money for the year is thus shown :—

Debentures issued	$ 7,301,989
Debentures repaid	11,579,003

The issue was the smallest since the year 1887, while the repayments exceed those of any year of the last ten. The reason for the decline is not far to seek. Business of all kinds was dull, farmers felt poor, money accumulated in the coffers of the companies. The current loans of the 56 companies, which had been $21,000,000 in 1889 and $28,000,000 in 1892 went down to $15,000,000 in 1896, thus :—

Loaned in 1896 on mortgage	$10,295,917
Loaned in 1896 on other securities...............	4,721,763

---

* We should here remark that three companies owing $2,500,000 to the public, one each in London, Woodstock and St. Thomas, hitherto placed, in these returns, among the regular companies, are now in a separate list, which embraces " companies having withdrawable stock." These are the Canadian Savings and Loan Co., the Ontario Permanent Buliding Society, and the Star Loan Co.

And the total sum invested and secured by mortgage at the close of 1896 by companies of all kinds, trust companies included, had declined to $109,271,000, where in either of the two previous years it had been as much as $116,000,000,

Lessened volume of deposit money, the result in part of a reduction in the rate of interest paid upon it, and in part of a change to a more permanent form of borrowing, such as debentures or debenture stock, is shown in a decline from $25,000,000 deposits received in 1889, and $22,000,000 in 1894, to $18,817,000 in 1896. The fall in the rate of interest paid on deposits has been distinct in the past few years, while debenture money is more cheaply procurable:

Average rate paid on deposits, 1888..........	4.02 per cent.
" " debentures, 1888	4.54 "
Average rate paid on deposits, 1896..........	3.66 per cent.
" " debentures, 1896	4.23 "
Average rate obtained on mortgages, 1888 ..	6 75 per cent.
" " " 1896 ..	5.959 "

TORONTO INDUSTRIAL FAIR

SECOND ARTICLE.

It was said to our representative one day in the main exhibition building, not apparently in a fault-finding spirit or as if personally complaining: "Oh! the authorities of this fair seem to prefer 'live' shows. A man who will give away bites of cheese or small packages of Zoroastrian tea, or even picture cards of a patent medicine, has a better chance of the choice spots here than a manufacturer or a man who shows handicraft work." Is this true? If it is, the time would appear opportune for re-arranging exhibits, if possible, so as to attract the frivolous crowd to places where they could have ears and palate tickled, while the staid and sensible visitor might find opportunity to observe more weighty matters. In various ways and from different quarters the opinion found expression last week that the main building contained too many booths of the "sweetie" order; too many people were selling at retail or giving away their products in a sweepstakes or *omnium scatterum* sort of style, like the largesse of the early centuries in Europe. This carnival sort of procedure is not by any means the ideal of an exhibition; nor, we are quite sure, is it the aim of the promoters of this fair.

Still, how are things of the kind to be avoided? How can the authorities best cater to the desires of the public and fill the pockets of the company, while having an eye also to the interests of the city and assisting the development of the country? There are all sorts and conditions of men, besides women and children, to be served or pleased at an exhibition of this kind. And while certain persons want solid meat, others will have nothing, so to speak, but pastry and trifle. Some wish to see a loom at work; others prefer a gyroscope; still others a gallery of pictures, or a display of juggling and tumbling. If each is to be pleased and induced to "call again," something must be provided for each. One point we mention which it cannot be out of place to insist on, however: if the fair is to retain the reputation it has secured for containing a representation of what is best worth seeing among the varied products of Canada, due proportion should be observed in the exposition of substances from mine, forest, fishery and factory, *as well as* from field and stable and orchard. The display of fruit was striking and admirable; the horses, cattle and other farm animals and products were worthy of the province; there were dogs and pigs and poultry, dairy products, shrubs and flowers, carriages and bicycles, photographs and water color paintings. But it will hardly be pretended that the iron and steel works of our great towns, the mineral industries, the woods and wood-workers (which in 1891 employed 95,000 hands and had an output of $95,000,000), the leather and shoe workers, the fish-packers, the wool, cotton and flax mills, had their due representation at this "Industrial" Fair.

Taking the display as we find it and as its extent and variety appeals to a person who sees the whole for the first time, it merits the name of a great fair, and naturally occasions the surprised and favorable comments that have been passed upon it by visitors from other provinces and other countries. It exhibits the progress of the country, too, in not a few directions; and in particular lines of production this progress is marked when we, in memory, place the crude attempts of former years side by side with the more worthy products of this year. But it is by no means perfect as an exposition of what Canada can do. It would be well to secure, by whatever means are possible, the exhibition of specimens of all our great industries. And this, it appears to us, ought to be practicable, while at the same time alloting a reasonably liberal share of the revenues to purposes of amusement.

In the course of such a backward glance as we have essayed to make, the departments of art work and women's work, as exhibited here, must not be overlooked. And in contrasting their former features with present ones, we must not be understood as disparaging woolen mitts and socks, crazy quilts, rag rugs, and such products of farm wheels or hands, as formed the staples of like departments at town or county fairs thirty years ago and still, quite properly, characterize some of them.

There were on view at this fair but few of the gorgeous-hued articles of the sort. They were replaced by more dainty, though less highly-colored, objects of female handicraft. Paintings on silk, glass, or leather; filmy specimens of lace work, netting, tatting, crochet; embroidery of real excellence, showing enormous labor bestowed upon subjects of doubtful utility, it is true, but still showing an advance in skill as well as taste.

"Why, sakes alive!" exclaimed a robust matron in our hearing, who gazed with wonderment at a show case in the east end, "here's more tea-cosies than ever I saw in my whole life."

And sure enough they were in variety enough to tax the foresight of prize-list makers and the discernment of judges; tea-cosies done in lace and insertion, painted or embroidered—sometimes all three at once, bannerettes, doyleys, *et id genus*. Sometimes the contents of these show-cases in the hot and dusty attic galleries exhibited

> Gauds and toys extremely out of season,
> Shocking to Taste, and to Fine Arts a treason.

But they were still evidences of creative instinct, of a feeling for beauty that only needs to be given direction and correction, expressive of the crude notions of novices in Art which, under proper tuition, may some day blossom into grace and harmony.

So with the exhibits of oil and water-color sketches in the same department. Not so many years ago these were for the most part tawdry, not to say hideous, specimens of childish ignorance of perspective and color, looking more like sampler-work or perforated card lessons than products of the paint box or the palette. To-day we observe decided progress in choice of subject, as well as in treatment. Most of the sketches are of human heads or busts, animals, shrubbery, or flowers or mosses, instead of attempts at broad landscape scenes, which stared at one from the overloaded canvas, without either atmosphere or background to relieve the flatness. We are sceptical as to the outcome of the higher education, so much vaunted in the present day, which aims to make artists and professional men (and women) out of persons whom the country needs as mechanics, farmers and housewives. But we see no objection to having the efforts of leisure of either country girl or city "lady" directed towards producing pretty things instead of ugly things. If their budding tastes flower out in embroidery, let it be tasteful embroidery; if they will draw or paint, in the intervals of work, let them at least learn enough of the principles of either drawing or painting not to make the mistake of the German who, desiring to show a rooster behind a barn, could think of no other way to do so than to draw the rooster bigger than the barn.

SAVING PROPERTY.

Does the Toronto Fire Brigade know its business? Is it sensibly directed? Judging by its procedure at the two fires of Friday last we should say that a confused recklessness took the place of skilled effort to save property. From what we are told by an eye-witness of the fire in Eckhardt & Co.'s grocery warehouse, that blaze might have been readily put out by a chemical engine, if promptly on hand. But the only way the brigade seemed to think of was to pour tons upon tons of water in at the windows, deluging the flat and causing needless loss. Similar frantic haste to pour in water characterized the Yonge street fire on the evening of the same day. There is something wrong, not only with the method and discipline of the men, but with the chief's idea of the purpose of the brigade as a whole. Neither property-owners nor underwriters can afford such wasteful and rash conduct on the part of men whose business is to save property, not destroy it.

TREATING STREET REFUSE.

Referring to the letter on street garbage and the direct or indirect production of city lighting therefrom, we reply to our correspondent that the article of last week simply professed to describe Mr. Harris' experiment, and to state what he thought his method could effect. Therefore we did not think it needful to refer, except "in a general way," to what was being done elsewhere. We had noticed, however, what Lord Kelvin stated last month at New York on the subject: "Ten tons of cinders, garbage, and other rubbish have the same capacity for producing steam as one ton of coal." Referring to the Shoreditch works he said: "Now the municipal electrical-plant furnace is fed by garbage, which we call dust. The gas is produced principally by condensation in cells at a high temperature. The furnace is designed specially for the combustion of garbage. But to obtain a practical appreciation of the value of this discovery, consider that Shoreditch paid formerly two shillings and threepence a ton to street-cleaners for gathering the garbage of the town and throwing it into the sea!" Lord Kelvin says 2s. 3d. per ton; our correspondent says 3s. 2d. per ton. In either case there is a great saving, for instead of paying out money for wasting garbage the town saves the money.

We observe that in the city of St. Louis, Missouri, the refuse is placed in enormous vertical cylinders, surrounded by steam jackets, which evaporate the seventy-five to eighty per cent. of water in the garbage. The fatty substances are dissolved, and as the result of a number of processes a fertilizer is produced which is worth from nine to twelve dollars per ton, the demand exceeding the supply. An American writer, Mr. W. George Jordan, states that one of the purest and best soaps of the United States was made of garbage grease before cotton-seed oil entered the field. Garbage, by a machine called the "dust destructor," is in London converted into clinkers, which can be used for roadways, as artificial stone for sidewalks, and as sand for mortar and cement. In Paris the visible particles of iron, worn from wheels and from the shoes of horses, are rescued by passing powerful magnets through the sweepings. It may be said that we hardly yet know what hidden sources of wealth are in street waste.

ASSOCIATED CHAMBERS OF COMMERCE OF GREAT BRITAIN.

A special meeting of the Association of Chambers of Commerce of the United Kingdom was arranged for Tuesday and Wednesday, the 14th and 15th September, 1897, at Middlesbrough, Hon. Sir H. Stafford Northcote, Bart., C.B., M.P. (president), in the chair. The following were among the topics to be submitted for discussion by different chambers:

Not first in order, but certainly not last in importance, are the deliverances of different bodies with respect to the adoption of the metric system of weights and measures in the United Kingdom. For example, the Birmingham, Derby, Leicester and Newry (Ireland) Chambers pronounced in favor of the compulsory adoption of the metric system. The Newry Chamber added, what is not generally popular in the Old Country, in spite of its immense advantages, that a decimal system of coinage should be adopted for the United Kingdom. This reform may come in our day, but it is doubtful, the people of the Old Country are so conservative.

The Chambers of Southampton, Newcastle, and Gateshead are not satisfied with the management of the post-office, the telegraph, and the telephone by the British Government in the United Kingdom. Newcastle asks for more facilities; Wakefield claims that an address of four words should be allowed free in each telegram; South of Scotland demands ocean penny postage; London Chamber wants something done with respect to the commercial education scheme it launched for Great Britain. Also it "cordially appreciates the proposal of the Canadian Dominion to discriminate in its tariff between goods coming from Great Britain and goods coming from countries which impose high tariffs on Canadian produce, and is of opinion that Great Britain should denounce such treaties as may prevent the intention of the Canadian Government from being carried into effect." With respect to "closer relations within the Empire, it regards with unqualified satisfaction the course adopted by her Majesty's Government in bringing about the combined visit of the premiers of the self-governing colonies during the Jubilee. and trusts that they will lead to the establishment of closer relations between the Mother Country and the outlying portions of the Empire.

It was rather a cute move of Leicester, doubtless as a means to an end, to ask that the Inland Revenue Department be memorized to issue the list of dutiable articles in metric weights and measurements. This done, its simplicity will surely do something to popularize the metric system. The British Chamber asks that "for the protection of the trade and commerce of this country, the attention of her Majesty's Government should be directed to the necessity for immediate enquiry into the condition of the food supply of this country in time of war."

In the opinion of the Bradford Association, it is desirable that young persons intended for commercial careers should, besides passing through the ordinary curriculum of a secondary school, be specially instructed in subjects appertaining to commerce, and that in order that British commercial education shall not be inferior to those of any Continental country, it is urgently necessary that Government aid should be extended to the teaching of commercial subjects, as it now is to the teaching of science and art.

MARITIME BOARD OF TRADE.

For three years the members of the different Boards of Trade in the Maritime Provinces have met in annual convention. This year the meeting was held at Charlottetown, P.E.I., and a good representation of the commercial interests in the Atlantic provinces was present. Different communications were received from various quarters and several important resolutions were passed. President Troop, in his annual address made an excellent summary of the trade condition, and viewed with favor the movement to extend the Intercolonial Railway to Montreal. On the discussion of fish and fish oils, Mr. Mitchell, of Halifax, introduced the following resolution which was carried:

"*Resolved*, that this board memorialize the Minister of Marine and Fisheries, to have the Inspection Act regarding pickled fish made cumpulsory."

One of the numerous advantages of a confederation of boards of trade is to be seen in the following resolution which was passed in regard to a grievance that affects not only the commercial men of Eastern Canada, but also of the West. The resolution moved by G. E. Faulkner, seconded by Mr. Turner, was as follows:

"Whereas, the policy of free and unhampered commerce between the various provinces of the Dominion of Canada is one of the fundamental principles upon which the union of the provinces was consummated; and whereas, the Legislature of P. E. Island has enacted a law placing a tax on commercial travellers and a proposal to enact a similar law has been before the Legislature of one of the other provinces; resolved, that the Board of Trade of the Maritime Provinces place itself on record against legislation of this character, and commends to the commercial public of P. E. Island the desirability for having the Act repealed.

A resolution against discrimination, in coal rates to manufacturers, as against Truro, carried on the motion of G. A. Hall. It was also resolved to memorialize the Dominion Government to place another winter boat on the P.E.I. route. Mr. Jarvis moved the following resolution, which carried

"Resolved, that this board desires to impress on the various local boards the importance of doing all in their power to encourage tourist travel in their respective localities; also, resolved, that this board submit to the Government the importance of providing a by-law that each can or package be marked with the net weight of the article contained therein, and suitable penalties be imposed for infractions in putting up such foods; also resolved, that this board urge the Dominion Government to take over the telegraph service connecting P. E. Island as a Government work or bring about a readjustment of the rates.

CANADIAN FIRE UNDERWRITERS:

The meeting in Quebec last week of the Canadian Fire Underwriters' Association is said to have been one of the most satisfactory it ever held. True, there were some awkward-looking matters to be faced, upon the occasion, as to the outcome of which apprehensions had been felt. But these were satisfactorily adjusted. The supposed Winnipeg grievance was found to be a will-o'-the-wisp, and the company which had threatened to leave did not leave, so that the principal elements of anxiety were got rid of. At the request of the Winnipeg Board of Fire Underwriters measures were taken at the meeting with a view o affiliating that body, or in some way bringing it within the scope of the association, for more effectual working. It is now fourteen years since the association was formed, and the solidarity displayed s latest gathering, induced the confident hope on the part of some the members that it would be even stronger fourteen years hence. The Quebec Assurance Company, and the local agents of all the fire insurance companies in the city entertained the visitors most handsomely in the ancient city. The lunch and the sail on the river in the fresh breeze and bright sunshine were memorable.

DANGERS OF ACETYLENE GAS.

Something of a damper has been put upon the general use of acetylene gas for illuminating purposes in the onerous regulations imposed by the underwriters upon its employment. Whether it be that impure calcium carbide, instead of pure, has been used in the production of the gas, or whether the machines for making the gas have been defective, it is certain that elements of danger have developed themselves. It is to be borne in mind that calcium carbide when exposed to moisture evolves acetylene gas, which is of a highly inflammable character. This gas when mixed with air, or when under even slight compression, becomes powerfully explosive. Again, impure carbide evolves gases which render the acetylene produced liable to spontaneous ignition, and besides, danger of explosion may arise from imperfect arrangement of the generating machines; as for example, in not having sufficient escape pipes provided to carry off excess pressure of gas; danger from heat generated by too rapid conversion of carbide into gas; danger of accident to the machine, etc.

In these circumstances the Canadian Fire Underwriters' Association has framed regulations for the use of this gas, as below, and if these regulations are not observed to the full, double rates of insurance are to be charged:—

1st. That no calcium carbide or gas generating machine be allowed in any building insured.

2nd. That generator must be placed in a separate building, constructed as follows, viz.: Walls solid brick or stone, not less than nine inches thick; roof entirely of iron or other fire-proof material; floor of cement or concrete, with slight upward slope from door; entrance to be by an iron or standard fire-proof door, no windows or other openings, except for ventilation, which shall be through an iron pipe, not less than six inches in diameter, projected sufficiently through the roof and turned down at the outlet. Generator must be provided with escape pipes of sufficient capacity to allow gas to escape freely at a pressure not exceeding five inches of water. Care must be taken to deposit residue from generator at a safe distance from any building.

3rd. That generator building must be located at least 10 feet from a brick or stone building, or 20 feet from one of any other construction.

4th. That the storage of calcium carbide be limited to 300 pounds, to be kept in air-tight metallic cases not exceeding 100 pounds capacity, and confined to the generator building.

It is quite possible, considering the extent to which acetylene gas machines are used by merchants and others in smaller places in Ontario, that many persons are running a risk in its use of which they are quite unaware. They have possibly been told that it is not dangerous, but the same thing used to be said of gasoline, till fatal explosions came. Spontaneous ignition or explosion are unpleasant possibilities in a new and attractive method of lighting; and when bodies such as the fire insurance associations in the States and Canada warn their customers, as they have done, it is not the part of wisdom to ignore the risks which have been ascertained to exist. If the acetylene gas machine maker dislikes these regulations and calls them foolish or needless, the answer to him is that an added risk attaches to the use of this substance, and that people who wish to be safe will heed the recommendations above given.

GUARANTEE INSURANCE.

The extent of the field on this continent for guarantee insurance, which is insurance that indemnifies companies or persons for losses by dishonesty of employees, is very great. How great will appear when we point out that one company, a Canadian one, issued and renewed last year no less than $48,314,242 in policies of this kind. To a large degree the companies doing this business are taking the place of private bondsmen in cases where security is required for the faithful performance of their duties by persons in positions of trust. The total business of this kind done in Canada by four companies was $13,707,000 under 6,904 policies. The total premiums were $69,750, and the claims paid $12,089.

An extensive business is done by the Guarantee Company of North America, which issues policies of fidelity guarantee. Of late years this company, which at first devoted its attention to Canada alone, under the name of the Canada Guarantee Company, has greatly extended its business in the United States, where the field is very large. It issued and renewed in that country last year policies for $48,314,242, on which the premiums were $172,038, while its Canadian business amounted to $5,313,500, bringing 26,103 premiums. The losses incurred during the year were $73,118, all but $7,532 of which were in the States. There are no unsettled claims in Canada, but $71,000 remains unsettled in the United States.

STOCKS AND OTHER MATTERS IN THE STATES.

A great deal of excited buying of shares has been going on for weeks in the New York market. Conditions existed which lent wings to the flights of speculative imaginations, and there was expensive buying and unnatural forcing up of prices of securities. This arose from making unrealized profits a basis for margins. But sensible people condemned this sort of financing, and bankers, as well as financial agents, discountenanced it; so much so, that some very prominent operators were induced to reduce their holdings, a fact which had a good effect.

There was good reason for such a reduction of speculative holdings, apart from the good effect it had in equalizing holdings of securities in Wall Street. The money was wanted in the interior of the country, to help the movement of the crops and to supply legitimate industrial demand. Henry Clews says, in this connection: "In years of prosperous harvests there is always an active speculative buying of stocks so soon as the harvest is assured. At the same time, there is also an unusual demand upon the city banks for currency to move the crops. A point is thus reached, in the early fall, at which there comes a conflict between the money demand from the interior and the demand for loans from the Stock Exchange interest. The wants of the former class must have the preference; and almost invariably the latter class have to contract their loans at the cost of a spasm in the Stock Market. . . . The action of the banks has been timed with much prudence and consideration. Had it come at a later stage, the overloading by sanguine operators would have reached worse excesses, the contraction of loans would have been more severe, and the Stock Exchange would have been seized with a violent convulsion, with consequent heavy losses and more or less shock to general business. Taken in time, however, this regulatory handling has been administered when operators were still able to accommodate themselves to it.

The statistical statement of matters commercial and industrial by *Dun's Review* is interesting. That journal says money is no longer a drug in New York, because trade and industry advance without halting. "Payments through chief clearing houses have been 65.7 per cent. larger than in last year for the week, and 17.3 per cent. larger than in 1892. Railroad earnings in September also equal those of 1892, and exceed last year's by 12.3 per cent. The heavy liquidation of weak holders depressed the average price of railway stocks $2 per share last week, but they recovered $1 Wednesday, only to break sharply on Friday, closing $1.73 lower for the week.

"Produce markets have been uncertain, closing a fraction higher for both wheat and corn, while the decline in cotton continues. With 8¾ cents paid for spot at the end of August, cotton has dropped 1½ cents, or 18 per cent., in less than four weeks, in spite of a remarkable revival of manufacture. The estimate of the corn harvest most credited by the trade is only 1,750 million bushels, but is coupled with figures tending to show a surplus from the last crop of 400 million bushels over ordinary consumption. . . . Wheat has gained a fraction for the week, while Atlantic exports, flour included, for three weeks have been 12,498,181 bushels, against 6,183,743 last year. Western receipts are exceeding last year's, and foreign estimates now agree in making the probable requirement from this country over 100 million bushels greater than last year."

The official ending of the Western coal strike adds many thousand men to the working force in the mines, and others in manufactures using bituminous coal. The anthracite strike has substantially ended, and no extensive labor disturbance is threatened. The output of coke is now 125,000 tons, and the price is also advanced. Some branches of the iron and steel industry are clearly no longer able to keep up with their new orders. Others are very fully employed for some months ahead, and with all the demand is increasing. The average advance of iron and steel products from the lowest point is 8.2 per cent.

DEEPER WATERWAYS.

Almost from the beginning of commerce on the great lakes projects have been advanced with a view to secure a continuous transportation service from the head of Lake Superior to the ports of Britain and Europe. Numerous reports upon the feasibility of constructing deep waterways have been published by more or less competent authorities. The different commissioners who have prepared estimates as to the expense involved in such an undertaking differ so widely in their conclusions that it is impossible to arrive at any very definite idea of the costs of construction. But putting aside the difficulties of engineering, which even by the estimate of the most optimistic investigator involves an enormous expenditure of money, there are other difficulties which present themselves as likely to impede a transportation service over lakes and ocean alike. At the Deep Waterway Convention in Cleveland two years ago, a well-known lake shipbuilder declared that ocean transportation and lake service would not mix any more than oil and water.

The competition that must first be met at the hands of the present ocean freight carriers would render it necessary that the ocean-lake vessels should possess the maximum freight carrying capacity. If the depth of the lake channels reached 20 feet in order to make their navigation possible, the harbors on the lakes must be deepened at enormous expense to the different cities and the two interested Governments. A revolution in water transportation methods has been made within the past several decades, and who is there that will undertake to predict that as great changes will not take place in the next fifty years? The owners of ocean freighters will always be able to take advantage of new methods, while interests that have invested in vessels suited to service on the ocean and lakes alike must be limited in their adoption of new economies by the artificial waterways to which they are confined, unless additional expenditure is incurred in the reconstruction of the waterways.

It seems impossible that any material advantages can be gained by deep waterways in America without the co-operation of Canada and the United States. At the present time the Governments of these two countries find it impossible to arrive at a harmonious understanding in regard to conflicting fiscal arrangements. A union that would be strong enough to carry to completion a task of the magnitude of the proposed deeper waterways, and successfully regulate their navigation, is very desirable, but it seems distant.

LUMBERING AT PARRY SOUND.

While the lumber trade of the Maritime Provinces has received a set-back from the glutted condition of markets in the United Kingdom, and while the lumbermen of the Ottawa and of certain parts of Ontario are more or less disturbed as to the prospects of their trade, it is satisfactory to hear of one locality which is actively preparing for an increased trade. This is the Parry Sound district on Georgian Bay. The Parry Sound *Star* of September 27th says: "Notwithstanding the gloomy outlook for the lumber business which followed the imposition of the American duty, the coming winter will be one of the busiest in years in our lumber woods. Lumbering has suddenly taken a boom, and almost every lumbering concern is rushing into the woods to manufacture logs. Last week we were able to announce authoritatively that the Conger Lumber Company had decided to cut 20,000,000 feet of saw logs this winter, and that the contracts had been let." . . . Since then three other camps have been started. "The Delta Lumber Company has two camps and may add two more, and the Holland Emery Company are putting in their full complement of camps, and there are many jobbers' camps to be established in different parts of the district. Settlers in this neighborhood will be busy getting out basswood logs for the Patent Cloth Board Factory, and there will be a good demand for hardwood logs next summer. Already almost every available man has been engaged to go into the woods."

THE HOP MARKET.

Hop picking in Ontario yards is completed for this season, and attention turns in increased degree to the markets and the prospects for values. The weather during the picking season has been in most districts all that could be desired, and the quality of the hops, as a rule, is excellent. Several samples of Ontario hops shown in the Toronto market would have brought a higher quotation if more care had been taken in the picking. Leaves and stems have been mixed with the hops. But in the majority of cases the new hops show excellent color, are strong and well flavored. The total yield is placed at slightly less than that of last year by conservative merchants, while growers maintain that there is a big shortage, and look for higher prices. Transactions are not numerous. Growers are asking 15 cents a pound, and allege that several lots have been sold at this figure. Merchants in Toronto regard this as an exaggerated quotation, and say that 10 to 12 cents is nearer their true value. The Montreal quotation is 13 to 15c. this week for choice Canadian. Growers appear confident, and some of them, we are told, refrain from making quotations at the present time, and prefer to carry their stocks until the advance in prices which they regard as inevitable takes place. The Waterville, N.Y. *Times*, Sept. 21st, says: "Growers are feeling jubilant, this week, over the improvement in prices for their product. Since the market opened on the late crop, there has been a steady advance, until on Saturday and Monday 15c. was freely offered. We have not heard of a sale at that price, however, showing that the situation is strongly in their favor. The majority of the picking is done. Only a few of the larger growers are still at it. The week opened very cold and unpleasant, and those in the yards are picking under difficulties. Now that the harvest is nearly over and the returns come in as to the number of boxes compared with last year, it would seem a very conservative estimate to put the crop at not far from 25 per cent. less. The full returns, however, are not all in."

CURRANTS, RAISINS, AND DATES.

The grocery trade is at present showing considerable interest in dried fruits. New currants are now coming to hand, the first shipment of the season arriving in Toronto on Sept. 27th, while on the 29th several shipments were received via England. The "Avlona" should arrive in the port of Montreal on October 9th with bulk shipments of currants and raisins. The market in Greece has shown a decidedly upward tendency during the week. No information is given by cable as to the cause of this renewed strength in the market. Mail advices view the position as one of strength and say that "if the crop eventually proves to be not over 130,000 to 140,000 tons we can hardly expect any serious decline, at least until after the holiday demand has been supplied." The new crop, apparently less than an average in amount, has come upon a market almost bare, and the whole situation has an appearance of strength. Valencia raisins having shown temporary weakness last week are now recovered, in part, as a result of a strong English demand. It is said that the prospects for the crop of Persian dates are not satisfactory, although the output may be larger than expected, the delay in making shipments of new crop this year, will it is alleged, leave the markets of Canada and the United States, under ordinary demands of consumption, practically bare of stock by the time new goods arrive.

THE CRANBERRY SEASON.

The prospects of trade in cranberries are being discussed by interested dealers. At present enquiries for the berry are limited, but with colder weather, activity may be looked for. The 1897 crop of the United States is beginning to move and is of good quality. Dealers say that receipts are light, and look for less than an average yield. A prominent American firm places the statistics of the trade as follows:—"The total crop of the country a year ago was, in our opinion, over 900,000 bushels, divided about as follows: Cape Cod and other New England districts, 650,000 bushels; New Jersey and Long Island, 225,000; Wisconsin and other Western States, 40,000. Based on above figures the estimated crop for this year shows: Cape Cod and other New England districts, 487,500 bushels, decrease 25 per cent.; New Jersey and Long Island, 231,750 bushels, increase 3 per cent.; Western States, 60,000 bushels, increase 50 per cent.; estimated total crop in bushels, 779,250."

IN THE DRY GOODS STORE.

Shot grounds with figures in chenille effects are found among the silk gowns brought from London, where they are fond of velvety markings.

Handkerchief importers in the United States are awaiting final decision in the case of Jonas Bros. vs. the Government, involving the question whether initial handkerchiefs are to be officially and judicially designated as embroidered.

The correct Derby hat in the United States for fall has a full crown and well-pitched brim, raised considerably at the sides, and ending in a broad, slightly flattened curl that inclines toward the front and back. Seal brown and black are as popular as ever.

The silk hat, in the American style, according to the *Dry Goods Economist*, has a more belled crown than last season, the curl being heavy and rather flat, tapering to the front and rear. A pronounced pitch is noticeable in the brim, a feature only slightly shown in the past year. The brim for men measures 1⅞ plus 1-16 inches, and for young men 1¾ inches, with reversed binding.

Reports from Leeds state that there is an average turnover in beavers, meltons and friezes. Serges of best make, in dark colors, together with vicunas and heavy overcoatings find most favor just now among buyers. Worsteds of all descriptions are comparatively neglected, but a more confident and hopeful tone prevails, and there are indications that business will take a turn for the better in the near future.

According the circular of the Irish Flax Supply Association, the imports of flax and tow in August, contrasting with the average of similar month in the last five years, shows an increase of 10.6 per cent. in quantity, and 17.4 per cent. in value. From Belgium the increase is 69.3 per cent. (tons), and from Russia 11.5 per cent. The shipments of linen piece goods have been less in August than the average by 8,675,360 yards, all of which is accounted for by the decrease to the United States. The leading countries stand as follows:—Decreases—United States, 82.8 per cent.; Foreign West Indies, 64.9 per cent.; Australasia, 18.7 per cent.; British North America, 2.2 per cent. Amongst the increases are the following:—France, 75.7 per cent.; Republic of Colombia, 24.0 per cent.; British East Indies, 16.5 per cent.

The extent to which textiles were conspicuous by their absence at this year's Toronto Fair has been remarked. One worthy exhibit there was, however, upstairs in the main building, of the varied and most creditable products of the Merchants Cotton Company, of St. Henri, near Montreal. Here were not only plain bleached goods, such as thin muslins and the firmer shirtings and still stronger sheetings, with the attractive label of the Dominion Arms in colors on each bolt; but such less known domestic goods as shoe-linings, cheese bandages, butter and cheese covers, and screening for fruit baskets—large items now in the industries of Canada. There are also such still more modern products as hospital lint, ducks of various weights, and the cotton bases for oilcloths and rubber cloths, which are largely produced in both Quebec and Ontario. Some of these goods, of course, are thin and cheap stuffs, they are not needed to be other; but in fabrics where roundness of thread, firmness of texture, honesty of material are needed, the product of this factory bears close inspection, and bears it well. Grey goods from the St. Henri are shown as well, in heavy medium and light weights. Messrs. A. Ewan & Co., the selling agents in Montreal, are entitled to be congratulated on the extensive product of the company, and Mr. James E. Knox, the Toronto agent, has displayed them well. It is worth remark that the mill has in manufacturing processes gone in some cases a step beyond the mere production of a textile fabric; as, for instance, in pillow-slips, which are shown woven circular, and made by the yard, with embroidered edge or plain. In respect of the goods of this mill generally, the bleaching and finishing are most creditable.

FOR GROCERS AND PROVISION DEALERS.

The brewers of Victoria have been notified that they must pay the wholesale liquor license fee. Some of them will fight the case, while others have already paid their $100.

The sale of a consignment of rolled oats by the McKay Milling Company, Ottawa, to be used in the household of the Emperor of Russia, is a somewhat unique incident of trade reported this week.

A French manufacturer and chemist is said to be opening an establishment of the refinery character at St. Francis, Beauce, to convert maple sugar, which is abundant in that region, into a product of superior quality.

Supplies of Sicily and Bari shelled almonds promise to be very short, according to advices received from primary markets. The Sicily market shows a continual upward tendency. The crop of Jordan shelled almonds is also reported to be light.

Our Montreal correspondent writes that while there are not many transactions to report in teas at first hands, the market retains its firmness. Recent cable repeat orders to Japan have been declined, except at an advance of a cent to a cent and half per pound for good medium grades.

A 4,000 ton cargo of raw Java sugar is now unloading at Montreal for the St. Lawrence Refinery, and a cargo of 4,500 tons from Iloilo is close at hand for the Canada Sugar Refining Co. This will probably complete the season's receipts of raw cane sugar, but further supplies of raw beet sugars are expected.

Late advices from Barbadoes say that the weather has been favorable for the growing crop. There have been no transactions in sugar during the fortnight, and there is very little now available. Shipments to date amount to 56,145 hhds. sugar, and 37,656 puncheons molasses; at the same time last year, 47,048 hhds. sugar, and 34,474 puncheons molasses.

An English advice of Sept. 25th says: "The Dominion Government's test shipment of 880 cases of Canadian pears, peaches and tomatoes, reached Covent Garden late on Friday. The dealers say that the fruit is excellent enough to meet a good sale if the packing were better. Let packers take a hint from these last words, 'if the packing were better.'"

The amount of the new crop of Brazil coffee that has come into sight thus far this season, says the *N. Y. Journal and Bulletin of Commerce*, has been far in excess of all previous records, being 1,061,000 bags larger than last year and 2,033,000 bags more than in 1895. The total supply received has been 3,761,000 bags, of which 1,355,000 bags went to Rio and 2,406,000 to Santos.

Seeing that the lower grades of molasses were unsalable at any paying price, many Louisiana planters dumped it into the bayous, until the authorities forbade them. Such cheap molasses is now used as a fuel, being sprinkled by a machine over the bagasse, or the sugar-cane from which the juice has been extracted. This, when put into the fire, burns with a strong heat. Its coal value is greater than its value for any other use, and over a hundred thousand tons was so used last year.

INSURANCE MATTERS.

Before Justice Armour and a jury last week the suit of the Great Northern Transit Company against sundry insurance companies was threshed out, much evidence, pro. and con., being taken as to the value of the steamer "Baltic," which was burned. The verdict in the test case was against the Alliance Company, and the others agreed to accept a settlement of their cases on a basis of the finding against the Alliance. The jury in this case found that the "Baltic" was worth $15,000 at the time she was fired, and that the boilers as taken from the charred wreck were worth $3,000. This, deducting salvage, leaves an amount of $12,000 to be paid. The various companies are interested to the extent of $13,500 collectively, and the assurance will be adjusted on the $12,000 basis.

A Lutheran clergyman over in Rhode Island has advised the insured of his congregation to drop their life policies, because "the Lord will provide." So he will. He will provide a very hot corner for such incendiaries as this "minister." When such men open their mouths to talk such infamous rot as this, the devil laughs up his sleeve and swishes his tail with delight. Does the "Rev." Otto Duessell, of Bristol, R.I, sit on his haunches and wait for the Lord to put food on his table and raiment on his family's backs?—*Insurance Age.*

The Dominion Government have issued to the Canadian Fire Insurance Company of Winnipeg, a license to carry on the business of fire insurance in the Dominion of Canada. The company at first operated in Manitoba only, under a provincial license, but later operations were extended into the Territories, under a license granted by th Territorial Government. Owing to a question having arisen as to the validity of the Territorial license, a Dominion license was obtained. The company now has power to do business anywhere in Canada, and no doubt in time its operations will cover all Western Canada, from the lakes to the coast.—*Winnipeg Commercial.*

—The Boiler Inspection and Insurance Company had 982 policies in force at the end of last year, whose aggregate was $3,458,875. It had no losses and no resisted claims. The premiums were $23,184, or at the rate of rather more than two-thirds of one per cent.

The insurance on the Hull Lumber Company's mill, according to an Ottawa paper, amounts to $70,000 in nineteen companies.

A number of life assurance officials, including some from Chatham' Stratford, St. Thomas, are visiting Montreal this week, to attend a convention of the superintendents, assistant superintendents, agents and medical examiners of the Metropolitan Life Insurance Company, at the St. Lawrence Hall. Among them we notice W. E. Scott, assistant superintendent; J. J. Wride, N. Silverthorn, G. Deo, J. Laing, N. Cattanach, and C. J. Oille, agents, all of St. Thomas, and Drs. McLarty and Curtis, of St. Thomas, and Sinclair, of Tilsonburg, medical examiners.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Sept. 30th, 1897, compared with those of the previous week:

CLEARINGS.	Sept. 30.	Sept. 23.
Montreal	$12,461,980	$12,333,657
Toronto	7,347,757	7,619,142
Halifax	1,129,803	1,097,009
Winnipeg	2,649,307	2,019,382
Hamilton	566,070	838,724
St. John	515,097	637,690
	$24,670,014	$24,546,604

Aggregate balances this week, $3,785,990; last week, $3,700,658.

ONTARIO CHEESE MARKETS.

Business transactions on the Ontario Cheese Boards during the week have been very limited. Salesmen and buyers have not been in harmony as to prices and the cheese has, in the majority of cases, been withdrawn because of the absence of acceptable bids. As everyone acquainted with dairy matters knows, the make of cheese in Canada and the United States has been phenomenally large. British imports for the eight months ending August 31st, were 205,008 cwts. more than for the same period a year ago. To this increase Canada contributed the enormous amount of 159,985 cwts. In view of the large supplies in the United Kingdom exporters naturally hesitate before paying the present rates. Factorymen point out, that although the receipts have been large, the markets have thus far exceedingly well sustained, and now at the close of the year it is not likely that a drop in prices will take place. The cheese made during the past six weeks has shown excellent quality. Shipments from Montreal last week amounted to 51,981 boxes making a total to date of 1,403,962 boxes as compared to 48,086 boxes for the same week last year, and 1,106,268 to date a year ago. We append our usual table of the weeks transactions on the Ontario Boards:

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.
Brockville	Sept. 23	..	3,040	....	9-9¼	......
Kingston	" 23	..	1,630	....	9⅜	Oct. 2
Perth	" 24	..	....	....	..	......

Picton	" 29	9	750	....	9¼	......

THE FIRE LOSS IN THE STATES.

A striking statement, illustrating the vastness of the fire-waste in the United States, was made the other day by Professor Allan Rogers before the Firemen's Association of Maine. This gentlemen asserts, and supports his assertion by figures which we may assume to be authentic, that in 1893 the aggregate losses by fire in that country exceeded the combined expenditure for maintaining the military and naval establishments of the country, and the expenses of government as well. Here are his figures: The direct aggregate fire loss in the United States during the year 1896, as estimated in the *Chronicle* Fire Tables, was, in round numbers, $118,000,000; in 1895, $142,000,000, and in 1893 it reached the enormous amount of $167,000,000. For the year 1896 the cost of the national civil establishment, including foreign intercourse, public buildings, collecting the revenues, deficiency in postal revenues, bounty on sugar, District of Columbia, etc., was, in round numbers, $87,000,000; the cost of the military establishment, including rivers and harbors, forts, arsenals and seacoast defenses, was $50,000,000; the cost of the naval establishment, including construction of new vessels, machinery, armament, equipment and improvement at navy yards, $27,000,000. Total, $164,000,000; which is $3,000,000 less than the fire loss in 1893. It will be seen that the fire loss is lessened in years later than 1893, but the total is so vast in any of the years mentioned that its meaning is better understood when a comparison like the one above is made. Now that the United States is learning lessons in economy, let us hope that they will take this one to heart and save some of the millions that their carelessness in the matter of fire has cost them.

—As the result of the legal recognition of accountancy as a profession, which was obtained by the American Association of Public Accountants, there has been incorporated the National Society of Certified Public Accountants in the United States. The requirement for admission to this body is that the applicant hold a certificate from the Regents of the University of the State of New York, certifying to his qualifications in respect to moral character and professional attainments. The objects of the society are the elevation of the profession of accountancy; the establishment in one body of the certified public accountants practising in the United States; the improvement of professional accountants' knowledge by lectures and meetings, and the formation of an accountants' library, and the establishing of the degree letters C.P.A.

—A number of Canadian boards of trade from Winnipeg to Montreal, have received copies of a lengthy letter on the subject of the Klondike gold fields which has been issued by the British Columbia Board of Trade. This letter from the Victoria board asks the assistance of other boards in doing all they can to make it more widely known, and more prominent in the press, that the Klondike gold fields are in Canada and not in the United States. That people fitting themselves out for the gold fields will find Victoria a much better place than San Francisco, and that it is to be remembered that all outfits bought in the United States are of course dutiable.

—The British Treasury has appointed a committee to consider and report upon the desirability of establishing a national physical laboratory to test and verify instruments for physical investigation, to construct and preserve standards of measurement, and for the systematic determination of physical constants and numerical data useful for scientific and industrial purposes, "and to report whether the work of such an institution, if established, could be associated with any testing or standardizing work already performed, wholly or partly at the public cost."

—In the course of recent changes among the staff of the Canadian Bank of Commerce, Mr. Garnet H. Meldrum, assistant inspector of the bank, was transferred to Montreal, to be assistant manager of the branch in that city, while Mr. James L. Harcourt, who has held the last-named post, was appointed to take charge, as manager, of the Windsor and Walkerville branches. Both gentlemen were the recipients of testimonials, Mr. Meldrum from the staff of the Toronto branch, and Mr. Harcourt from that of the Montreal branch.

—The former manager of the New Westminster branch of the Bank of British Columbia, Mr. E. A. Wyld, has been promoted to the position of assistant manager of the Victoria office, and is to assume his new duties this week. It is understood that Mr. G. W. Booth, who was formerly assistant accountant in the Victoria office, succeeds Mr. Wyld in the charge of the New Westminster branch.

Correspondence.

TREATMENT OF REFUSE IN TOWNS.

Editor MONETARY TIMES.

Sir,—I have read your article in your last week's number about the production of burning gas from garbage, and I note what you say has been done and is expected. The garbage problem is a very important one for cities, and every experiment upon it ought to be welcomed in the interest of municipal economy and municipal health.

You do not say anything in your article, except in a general way, about the progress already made in other countries in dealing with street refuse so as to make it of use in the civic scheme. I would therefore call your attention to a system which has been installed at Shoreditch, London. There a garbage crematory is combined with an electric light plant, and the city garbage which is there burned gives enough heat to drive engines to supply 4,000 electric lamps to light the city with. As long ago as 1893 an English engineer, Professor George Forbes, said: "From the house refuse of any town I can supply steam enough to generate electric light at the rate of one 16-candle-power lamp per head of population for two hours every night of the year." And efforts were made, in 1895 and 1896, to carry this scheme out. But they did not meet with success in other cities and towns of England, probably because the apparatus was not right. But it seems to have been made right at Shoreditch in using street dust, or at least, they have got results which show that they are on the right track, and may make further economies. This is the plan pursued in treating the street refuse, or dust as it is called: The plan is simple after all:

Shoreditch, which has a population of about 124,000, produces daily from 50 to 60 tons of dust, and the cost of removing this was formerly 3s. 2d. (say 79 cents) a ton. Now the dust is brought to the generating station, dumped into bins by electrically-worked lifts and cars, from which it is shovelled by hand into twelve furnaces or dust-destructor cells, as they are termed, and here the refuse is burned by means of a forced draft. The dust is burned both day and night.

If we can make gas out of our garbage and light the city, I say well and good. But do not let us be behind-hand in using every plan to keep our cities cleanly and healthy by adopting the latest and best plans of using up waste.

J. N. ARROWSMITH.

Hamilton, 28th Sept., 1897.

COMFORT FOR RAILWAY MEN.

The recognition of the right of the working man to the best that can be afforded is gradually being impressed upon the minds of those in control of this class of labor. One of the latest instances is furnished by the Chicago, Burlington & Quincy Railroad. It has been the custom upon this road in common with all others, when sending out a wrecking crew, to provide only the most crude eating facilities that could be imagined, an old freight car with a rough board table, and equally rough benches being thought sufficient. For this service the company in question has now provided a regular dining car, fitted up with excellent accommodations. The dining-room proper is 30 feet long, and will easily accommodate twenty-four men at the table. The kitchen is supplied with all necessary facilities for properly serving a meal, and there is no doubt but that the extra work done by the crew because of their appreciation of the efforts of the company in their behalf will more than pay the extra expense involved. More than all, will be the effect upon the minds of the men. They will see in this new departure an evidence of that for which they have long been contending, manifested, however, in a way that was not anticipated; and the recognition by the company of their rights will make them at once more respectful and self-respecting.—*Railroad Review.*

THE CAPITAL OF BRITISH COLUMBIA.

Writing on the subject of the room for civic improvement in a place so blessed by nature as the city of Victoria, B.C., and incidentally on the prominence which British Columbia is now attaining in the minds of British people, the *Province* of that city says: "So much for British Columbia, but what of its capital, Victoria? We have unfortunately still to repeat our query of a year ago, and ask: Is the capital to lead or to follow in the march of civic improvement? So far it has given no sign of a desire to lead, mighty little even of a desire to follow in the implied direction. Yet it must unquestionably do one or the other, if it is to hold its own and retain those advantages which pertain to its position as the capital. Lately it has been visited by a distinguished, we might say a very distinguished, body of visitors in the persons of the members of the British Association. With one accord they sang the praises of its unequalled situation, its unrivalled surroundings, and were never tired of dwelling upon their beauty and attractions. So it must be with every stranger who comes amongst us, and is imbued with a sense of the beautiful.

"For the fiftieth, if not the five hundred and fiftieth time, we would point out that herein lies the source of Victoria's future wealth—not as a commercial or industrial, but as a residential city. As the population and wealth increase, there will be yearly more people to the south and east of us who will be only too glad to come and spend their money here, if only we are in a position to offer them their money's worth, in the shape of good roads, good drains, good accommodation, good lights, good water, etc., etc., etc.

"At present we can offer them none of these things, and as it unfortunately happens that even the most ardent lover of natural beauty cannot live by scenery alone, he speedily tires of the view and hankers after more material comforts than our existing municipal arrangements enable him to enjoy.

"Victoria could and should be made one of the most ideal places of residence in the world. That way lies her future, and a profitable future too, for all whom it may concern."

THE DRINK RATE AND THE DEATH RATE.

A prominent member of the United Kingdom Alliance, Mr. James Whyte, has been holding up Canada as a model to other nations in the temperate habits of her people. He writes to the London *Times*, comparing the Dominion with Sweden and Norway in this respect. He proceeds: "Canada, has, I believe, the lightest drink rate, and also the lightest death rate of any nation in Christendom. For the ten years ended 1890, her death rate was only 14.01 per 1,000 of population living, and her drink rate was the equivalent in absolute alcohol of 1,149 gallons of proof spirits per head per annum. For England, for the same ten years, the drink rate was equal to 3.890 gallons of proof spirits yearly per head, or treble that of Canada, and the death rate to 20.08 per annum per 1,000 of the population; for France both the drink rate and the death rate during the period in question were considerably higher. The death rate was 21.99. It may be taken that the Canadian death rate was, in proportion to population, equal to about two-thirds of the average death rate of the principal European nations, and her drink rate to about one-third of their drink rate. It is possible that the age distribution of the population of Canada may account to some extent for the abnormal smallness of their rate of mortality. No doubt it does, but not to any great extent. I am convinced that the smallness of the drink rate is the main factor. In this connection it is important to note that Quebec, the province of Canada in which the temperance movement has made the least progress, has by much the highest rate of mortality. For the ten years in question it averaged 18.91 per 1,000 per annum, or 4.90 per 1,000 more than Canada as a whole. Its drink rate yearly was the equivalent in absolute alcohol of 1.436 gallons of proof spirits. Of course, as Quebec drank so much more than the average, the rest of Canada must have consumed considerably less than the average."

DEALS AND HARDWOOD IN ENGLAND.

In the opinion of the *Timber Trades' Journal*, of London, England, the high freights and insurances are having a beneficial effect on the deal market by removing the fears of a heavy import which the summer business was leading up to. "The inrush of wood goods all around the coast, it is now understood will gradually subside with a healthy result on prices. Baltic rates are reported a trifle easier, but it is too late in the season for any substantial decline, and the anticipations of over-wintering stock are likely to be borne out. Prices of Baltic and other woods at the public auction kept steady, and though best goods were slighted, this was caused by the high values lately realized exceeding the limits of dealers. There is no immediate change in the mahogany market; a fairly good amount of business is being done at about former sale rates. At the public sales dealers have operated freely, showing there is a good trade passing, and giving strong evidence of their confidence in the future. At the auction sale on the 7th instant, there was a spare attendance, but the buying power was strong, and nearly all the large parcels of African mahogany were cleared at from 2d. to 13½d., average 3 3-8d.; cedar 3¼d. and 3½d., average 3½d. There were no fancy wood buyers present, and consequently none sold. There is a decided improvement in the demand for mahogany.

—The premises of the celebrated Hachette Publishing Company in Paris were destroyed by fire last Saturday. Loss 1,000,000 francs.

—The secretary of the Cleveland Retail Grocers' Association, will propose at the next meeting of directors, that the association issue every sixty days, regularly hereafter, a bulletin containing the names of those people who do not pay their grocery bills.

—A decidedly unusual calling for a woman is practised by Mrs. Ida Lachmund, of Clinton, Iowa, who spends her summers in towing rafts and sawlogs on the Mississippi River. She manages a steamer which tows a raft of a million feet of logs five hundred miles down stream, and it is rarely she loses a stick.

—Dr. Smillie, of Gaspe Basin, tells an Ottawa paper that he is satisfied that the English oil company known as the Petroleum Oil Trust, operating in Gaspe peninsula, has, after years of discouragement, at last struck a good thing. The new well, nineteen miles from Gaspe, gives an average of 150 barrels a day. The company is sinking seven new wells in the vicinity.

—It is reported in *Science* that the recent French motor-car race from Paris to Dieppe showed an advance, in that the carriages were not entered by the makers but by the owners. Fifty-nine carriages started, the winner traversing the distance of ninety-three and three-fourth miles in scarcely more than four hours. There was only one steam-carriage and none with electric motor, oil being used in fifty-eight of the fifty-nine carriages.

—An American paper of repute says that Tennessee's Centennial Exposition at Nashville is said to be surpassing all records in exposition finances. If the attendance continues as large as heretofore it will pay back to th stockholders dollar for dollar and possibly a small dividend in addition. It was an ambitious project to launch in the depth of a business depression, and this success shows that the times have not been half as hard as the talk.

RESIGNATION OF A STATE INSURANCE COMMISSIONER.

Respecting the resignation lately of Mr. G. H. Merrill, insurance superintendent of Massachusetts, the *Insurance Register* says: "If with knowledge and experience in investigating the affairs of companies, a commissioner like Major Merrill will allow concerns to go on doing business and defrauding the people, when he must have known they were unsafe, what can be expected of men void of experience, and in many cases of sense, who conduct the affairs in their office after the fashion of some incumbents now in commissioners' chairs?

"But these comparisons do not in the least lessen the error and injustice of Commissioner Merrill. In his hands were entrusted the interests of the people of the Commonwealth of Massachusetts. These interests were misplaced, and where protection from fraud was to be expected protection to the fraudulent is found. We are sorry indeed for Major Merrill, but we are more sorry for the unfortunate victims of the associations he has permitted to carry on their unjust and dishonest business. Had he been true to the trusts imposed upon him thousands of dollars would have been saved, and the people of his commonwealth and his own good name and reputation have escaped this unenviable experience."

—A Winnipeg telegram says that two hundred and twenty-five thousand bushels of wheat were marketed in the Province of Manitoba on Saturday last. It brought from 75 cents to 80 cents a bushel. Receipts of wheat at Fort William for the week ending September 18, aggregated 313,884 bushels; the shipments were 140,622 bushels, and the quantity in store was 583,387 bushels. Stocks in store a year ago were 1,542,000 bushels, and two years ago stocks were 468,000 bushels.

A test of the new Waterous steam fire engine for Toronto took place the other day, before the members of the Fire and Light Committee. Messrs. C. H. and D. J. Waterous were also present. The engine was put through several thorough tests, viz., to raise steam from cold water and throw a stream through 100 feet of hose; throwing horizontal streams through 100 and 200 feet of hose, two streams through 500 feet of hose and one stream through 750 feet of hose. All these tests proving satisfactory, the engine was handed over for regular duty.

Commercial.

TORONTO MARKETS.

Toronto, Sept. 30th, 1978.

Dairy Products.—The butter market remains steady. Choice dairy grades are in small supply, and a number of dealers look for better prices in these descriptions. There are not a few, however, who see in the cheese situation inducements for the farmer to put his best efforts in butter rather than cheese, in which event, with increased production, prices must fall. Good butter is bringing 14 to 15c, per lb. The poorer grades of butter are not in active request, and dealers find some difficulty in disposing of stock. For creamery butter there is a firm market. All the stock coming forward is readily absorbed at previous quotations, tubs bringing 18 to 19c, and prints 19 to 20c per lb. Cheese is dull. The situation is elsewhere reviewed. Eggs are steady, dealers quoting 14 to 15c per dozen.

Drugs.—Business for some weeks past has not been as active as dealers expected; but there are not wanting signs of improvement. Values have shown an upward tendency. Supplies of castor oil are scarce and merchants predict higher prices. Quinine is maintained at recent advances, dealers quoting 30 to 35c per oz. Vanilla beans are higher, quotations having advanced fully 25 per cent., and merchants allege that further advances are not improbable. Oil of anise, cassia, sassafras, are all tending upwards. Cardamon seeds are easier.

Flour and Feed.—The active trade of last week has fallen away, and both by way of export and local business, the movement has fallen off. Bids from the east are fully 15c per barrel less than those of a week ago. Stocks in Quebec and the Maritime Provinces, are, it is alleged, not large, and the depression in values on this account is thought to be but momentary. The course of the market of course depends upon the fluctuations to which wheat is subjected. Hand to mouth trading is the rule at present, and there are many who think this policy in the best interests of all concerned. Bran is quiet and steady, with $7.50 to $8 quoted for car lots.

Grain.—Dullness has marked the wheat market so far as values are concerned. There are large receipts coming forward, and values have been weakened, ranging 2 to 5c per bushel lower than a week ago, and the market has been depressed by discouraging cable advices, as the world's shipments were heavy last week, exceeding 10,000,000 bushels, leading to an increase of 1,840,000 bushels in the quantity on passage to Europe, but this was counterbalanced to a slight extent by the reduction of over 500,000 bushels in the English visible. Oats are dull, and values have fallen off. Rye is in fair demand, but prices have declined 1 to 2c per bushel. Peas are dull and 1 to 3c per bushel lower. Barley has not yet commenced to show activity. The stocks in store at Port Arthur on Sept. 18th were 560,508 bushels, and there were received 556,329 bushels, and shipped 349,295 bushels, leaving in store on Sept. 25th, 781,583 bushels.

Hides and Skins.—The local situation in hides remains practically without change, dealers working on a very narrow margin. Green hides are purchased at 8½c, while cured are quoted at 8 3-4c per lb. The supply of sheepskins shows about the usual average of the season, dealers quoting 75 to 80c. In tallow the feeling continues dull, and former quotations continue to rule. Advices from the West, Sept. 28th, stated that business was quiet, but that prices were steady, with native steers at 11 to 11½c, 10½ to 10 3-4c for Texas, 10¼c for butt brands, 9¼c for Colorados and branded cows, 10 to 10¼c for heavy native cows and 10½ to 10 3-4c for light do. Calfskins were in fairly good demand, and as offerings were limited prices ruled firm.

Leather.—Business is quiet. Foreign buyers and domestic sellers are apart in their views, and for the moment the export trade is rather slack. Canadian manufacturers of footwear are now between seasons, and orders from this source are neither numerous. nor for large amounts. The next few weeks, however, are expected to bring considerable activity in the sorting-up trade, and this will probably be felt in leather circles. Tanners allege that advances are being secured on all sales of leather.

Provisions.—There is little or no change in the situation. There is a good steady demand for all kinds of pork products. Dealers quote long clear bacon at 9c, hams, 11½ to 12c; tubs, 13c, and rolls, 10c per lb. Lard is selling at 6 3-4 to 7c per lb. Dealers here continue to do considerable business with the United States. The Cincinnati *Price Current*, Sept. 23rd, says: "There has been a further reduction in the marketing of hogs to a moderate extent. Western killings represent a total of 265,000 for the week, compared with 280,000 the preceding week, and 295,000 two weeks ago; for corresponding time last year the number was 230,000. From March 1 the total is 9,935,000, against 8,195,000 a year ago—an increase of 1,740,000. Prices at the close average about 5 cents per 100 pounds higher than a week ago, and $1.05 higher than a year ago."

Seeds.—Only small quantities of red clover are offering, dealers paying $3.10 to $3.25 for ordinary samples, and for the best qualities $3.50. For new alsike $3 to $4.50 is quoted, according to the quality. Timothy is steady at $1 to $1.25, with sales of choice descriptions reported at a slightly better price.

Wool.—Stocks of fleece wool and supplies coming forward are scarcely sufficient to make a market. For the few lots offering, 20 to 21c is being paid. Pulled wools on domestic account are in somewhat better demand, and a number of the Canadian mills are evidently finding a better trade.

MONTREAL MARKETS.

Montreal, Sept. 29nd, 1897.

Ashes.—The advance which we noted last week has been fairly maintained, and further purchases are reported at $4.75 to 4 80 for first quality pots; very few seconds are offering, and an approximate quotation for them would be, say, $3. Pearls are nominal at about $4.40. The higher prices have induced a little larger receipts, and stocks in store, which were down to under 10 brls., stand now at about 100 brls, while some moderate shipments have also been made to Britain.

Cements and Firebricks.—A very fair business has been done in cements for the week, sales aggregating between 4,000 and 5,000 brls, principally Belgian, at prices ranging from $1.85 to 1.95, as to lot. British is quoted at $2.05 to 2.10. Receipts for the week ending to-day have been light, only 1,000 barrels of Belgian, and no British, but several vessels with large lots of Belgian are expected shortly. As before stated, the Belgian makes seem displacing British goods in this market, the receipts for the season so far being 89,000 brls. of the former to 22,000 brls. of the latter. Receipts of firebricks for the week, 28,000; the demand is steady at $15 to $21 per thousand.

Dairy Produce.—The exports of cheese from Montreal last month footed up some 51,941 boxes, as compared with 14,357 boxes sent from New York. The total shipments for the season thus far are now 300,000 boxes ahead of this date last year, the figures being 1,401,530 boxes this season, as against 1,102,522 boxes in 1896. Values are hardly as firm, exporters claiming they cannot pay makers' prices in face of English quotations, and stocks show some accumulation in the country; 9½c. is probable a limit for finest Ontario; Townships, 9¼ to 9⅜c.: Quebec, 9 to 9¼c. Of butter the shipments last week were almost *nil*, being only 243 packages. There is some fair demand for best Western dairy, of which supplies are light, the quality offering bringing 12 to 13c. mainly;

creamery is a shade weaker, 19c. being about the limit for finest. For fresh laid eggs there is good local demand at 13 to 14c.; candled, 11 to 12c. for best per dozen.

GROCERIES.—The movement continues of a satisfactory character on the whole, and stiffening values are to be noted almost all along the line. Molasses is showing marked advance, supplies being apparently smaller than generally calculated, and the low prices have apparently stimulated country consumption. One broker reports recent sales of 500 puncheons in fair lots at 23½c. per gallon, and jobbers' prices for Barbadoes have been advanced to 25 to 26c.; barrels, 28½c., and half barrels, 29½c. There is also a better enquiry for syrups, which are steady at the late advance; prices range from 1¾ to 2½c. per lb. in bulk. The good demand for sugars is well held, and refiners prices continue at 4 to 4 1-16c. for standard granulated; yellows from 3¼ to 3⅝c. per lb. Some fair sales of German refined are reported at a laid-down cost of about $3.55 to 3.60 per cental; Austrians would cost something more. In teas there has been somewhat of a lull in transactions from first hands, but the market retains all the firmness of late noted, and cable repeats to Japan have been declined, except at an advance of from a cent to a cent and a half per lb. for good mediums. Dried fruits have been fully referred to in the last two issues. The first direct steamer from the Mediterranean, the "Avlona," has passed Gibraltar, and is due here the 7th or 8th of October, with a full cargo. For spices there is more active enquiry and values are appreciating; white Penang pepper has advanced from ¾ to a cent in Lnodon. Canned vegetables show further advance, packers now asking 85c. for standard brands of tomatoes; corn 60 to 65c.

HIDES AND TALLOW.—The hide market is without special feature. Receipts are very fair, but the present demand from tanners is quite equal, and there is no accumulation of stocks in store. The price paid butchers is still on the basis of 8c. per lb. for No. 1 green, with the usual cent advance for cured to tanners. Calfskins, 8c. per lb. for No. 1; 6c. for No. 2. Lambskins, 50c. each, but the usual monthly advance of 5 to 10c. will likely take effect next week. Tallow is in light request at 1 to 1½c. per lb. for rough, and 3 to 3½c for rendered.

HOPS.—There has been no special amount of trading done in hops of late. Some fancy British Columbias have been shown here, for which 20c. was asked. Choice Canadians are quoted at 13 to 15c,; yearlings, 6 to 7c. and slow to move, old olds, dull, at 1½ to 3c per lb.

LEATHER.—Though there has been no repetition of the big sales of sole leather of a fortnight ago. a good business is still reported in moderate lots, and the probability of a further advance to 23c. for No. 2 manufacturers B.A. is freelydiscussed Some. Western tanners decline to entertain offers below 27c. for No. 1 slaughter. Black leathers are also very firm, and Oshawa splits are held at 25c. We quote:— Spanish sole B.A. No. 1, 24 to 25c.; do. No. 2, 22 to 23c.; No. 1 ordinary Spanish, 22 to 23c.; No. 2, 19 to 20c.; No. 1 slaughter, 25 to 27c.; No. 2 do., 21 to 23c.; common, 20 to 21c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to

METALS AND HARDWARE.—The week has been without special feature; an ordinary jobbing demand is reported, but no important deals. A 50-ton sale of Summerlee pig iron is reported at $17 50, though one holder still asks $20 to 20.50 for small lots from store Lead continues very strong at the advance, also iron piping. We quote:—Summerlee pig iron, $17.50 to $18.50; Carron, No. 1, $17.00; No. 3, $16.25; Ayrsome, No. 1, $16.50; No 3, $16 00; Shotts, $17.25 to 17.50; Carnbroe, $16.50, to $17 00, ex-store; Siemens pig No. 1, none; No 2 Siemens, $15.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $14 to 15.00; common do., $12 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $5 75 to $5.90; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D.Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2.45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 75 to 3.90; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 9 to 10c.

OILS, PAINTS AND GLASS.—Business is reported good and payments improved. Further advance has to be noted in turpentine, which is now quoted at 47c. per gal. for single barrels. Castor oil continues to strengthen, and 10c. is now given as the lowest figure for fair quantity. The stiffness in leads continues, and it seems pretty well understood that a further slight advance will be established next week. Other lines of goods are all steady at quotations. We quote:—Turpentine, one to four barrels, 47c.; five to nine barrels., 45c., net thirty days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels. 42c.; boiled, one to four barrels, 46c.; five to nine brls., 45c., net 30 days; olive oil, machinery, 90c.; Nfld cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 48c. per gallon in small lots. Castor oil, 10 to 10½c. as to quantity. Leads (chemically pure and first-class brands only), $5.37½; No. 1, $5.00; No. 2, $4.67½; No. 3, $4 25; No. 4, $3.87½; dry white lead, 4¾ to 5c.; genuine red do., 4¼c.; No. 1 red lead, 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; window glass, $1.30 per 50 feet for first break; $1 40 for second break; third break, $2.90.

WOOL.—The London wool sales opened this week, and a cable received on Wednesday reports an advance of 5 per cent. on closing prices of last series. This was anticipated. In the local market there is little doing at the moment, but quotations are stiffly held at 15½ to 17c. for Cape; B.A. scoured, 30 to 35c.; domestic fleece, 21 to 23c.; pulled, 20 to 22c. per lb.

THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,
32 Church Street, Toronto, Ont.

A. B. POWELL,

HOW A BOOK IS PUBLISHED.

A large book-bindery may have a capacity of ten thousand books a day. The resources of some of these binderies are wonderful. There is an instance on record where a publishing house took an order on Monday for a cloth-covered 12 mo. volume of 350 pages, and actually shipped two thousand copies of the book on the following Wednesday. The type was set by machinery for the entire 350 pages before work stopped Monday night. Electrotype plates were made so rapidly that on Tuesday morning several printing presses were set in motion. In the meantime covers were made in the bindery, and by Wednesday morning the binders had the book in hand. Two thousand volumes were completed that day, and the edition of ten thousand was entirely out of the way before Saturday night. In modern bookbinding machinery, as in the production of printing presses, America leads the world, and no other nation can equal it in the speed and general effectiveness with which all branches of the industry are carried out.—*Literary News*.

"RIDICULOUS INCONSISTENCY."

The *National Provisioner* says: "For years we have had the clamor that the farmer was not getting enough money for his wheat and his corn, and that he could not afford to raise cattle and hogs at the prices which were paid for them in the live-stock markets. Owing to conditions which to all appearances have nothing to do with politics, but are the result of an increased foreign demand and of general prospects for business, this state of affairs has changed, and wheat has gone above the dollar mark; corn, while not advancing in proportion, has risen considerably, cattle bring high prices, and small stock are worth considerably more than they were a year ago. Everybody would think that this would make everybody happy, since the much-lamented farmer is at last getting a fair value for his goods; but what do the inconsistent, sensational journals do, the same that clamored for the poor farmer, who was buried beneath the mortgages on his farm and could not live unless prices went up? They at once turn around and speak of the 'wheat barons,' the 'beef barons,' or robbers and monopolists, who raise the price of the workman's meat and bread, and do not give him a chance to live. Do these inconsistent fellows who write these articles really believe what they write? Do they think that corn, wheat, cattle, and live stock in general can go up in price without causing a rise in the price of flour and bread, and also of meat?

LABRADOR TIMBER LIMITS.

A Halifax telegram of last week refers as follows to supposed results of a search for available timber supplies in Labrador: Among the passengers who arrived yesterday from Newfoundland were Messrs. James Calder, Thomas Whitman, and A. L. Curry, of Bridgetown. These gentlemen have been in Newfoundland and Labrador all summer, having gone there for the purpose of prospecting timber lands in Labrador. Concerning the results of their trip Mr. Curry was interviewed by the *Witness* correspondent. The whole affair, he said, was but the preliminary of a large enterprise, which the people represented are in the hope of establishing in Labrador next year. As a result of the trip these gentlemen have made application to the Government of Newfoundland for the right to cut timber on three hundred and seventy square miles of territory on the Kennamore, Kennamic and Hamilton rivers, which flow into Hamilton Inlet, one of the coast waters. The valleys of the rivers mentioned have very wealthy forests of spruce bordering on them, as well as smaller forests of pine and hackmatack. If success attends the efforts of these gentlemen a company will be formed as soon as possible to operate in Labrador on a large scale. A schooner will be fitted out and will proceed to the spot with a surveying party and part of a plant. The mill will be portable, and will be moved from place to place as the profitable lumber of each district has been exhausted. Steam power will be used, and the mills kept the year round. The lumber will be sent to Great Britain.

—The S.P.C.A., of New York, has offered a reward of $25 for the arrest and conviction of any person throwing glass, pieces of metal, or other substances in the public streets or highways. The offer is made, of course, for the protection of animals; but its effect will naturally be to minimize the number of punctured tires, and wheelmen should co-operate with the society in securing its enforcement.

RAILWAY CONSTRUCTION IN THE UNITED STATES.

Official figures are now at hand showing the railroad construction of 1896. While the same has not been of an extensive character, there is considerable in the schedule which indicates that the totals arrived at were greatly helped by the developing demand of 1896, which has since gained most encouraging proportions. Only 1,687 3-4 miles of track were built, but this raised the total mileage to 182,600 miles, and less than 5,000 miles of this was out of operation. The earnings of the year were $1,125,500,000, and again a satisfactory element is apparent in the fact that $770,000,000 of this amount represents freight traffic. Comparing the statistics with past results, and estimating the increased traffic and earnings which have marked reports since the beginning of the present year, the railroads cannot complain that they have not had their full share in the newly-awakened industrial activity of the country. *Chicago Journal of Commerce.*

ENGLISH vs. AMERICAN ROAD-BEDS.

It would appear that the assumed superiority of English over American road beds is beginning to be questioned even in that conservative country. The London *Times* recently had an article, in the course of which it says: "Let us now turn to the United States, which furnishes an interesting comparison in this particular. Over there, what are known as "T" rails—so called from their shape—are in universal use, but, most important of all, chairs are unknown. The road bed consists of transverse timber sleepers, laid so closely together as to be practically continuous, and the broad base of the rail is spiked direct to these cross-ties, while at the joints every effort is made to stiffen the track by connecting them with angle plates having the general sectional form of the rail, and its flange secured by bolts and keys. This system is found to give great elasticity. In the weight and length of the steel rails a constant increase has been going on for some years. Truly, America is the country of big things. We now have to record a very interesting experiment. A short time ago the New York Central Railroad Company, anxious to see if its system was really the best, sent over to this country for a mile or so of the London & Northwestern standard track. This was laid down by English workmen, 'lock, stock and barrel,' side by side with their own, and subjected to exactly the same tests. But before long the English pattern proved itself unequal to the strain, for the heavy American trains, which bounded along over their own elastic roads, smashed the chairs of the more rigid North-western type to pieces. Naturally, English engineers commenced to pooh-pooh this trial, but now that our own passenger rolling stock is becoming the veritable hotel on wheels, the truth ought to be investigated and the question solved: 'Is our permanent way the best that money con give?' There was some talk about the English companies imitating the New York Central by subjecting a length of the American company's rails and appurtenances to a thoroughly fair test according to the conditions of this country. It is an acknowledged fact that in America trains make less noise in running than they do over here."

THE LUST FOR GOLD.

Manhood, honor, and all that is best in life, is seriously imperilled in Canada at the present time, says the *Westminster*, by the inordinate lust for wealth which is being stimulated by every day's report of fortunes made in mining stocks. The love of money is always strong. Many men are ready for any risk or sacrifice or endurance so long as there is hope of great gain. But there are ebbs and flows in the tides, and just now the flood is at its full.

Those who have to do directly with commercial affairs know how eager the rush is, and how daring men become. Not a little bit of what is called commercial enterprise and up-to-date business is ill-disguised robbery. The false and foolish maxim that competition is the life of trade, is working out its legitimate results. There is very little business honor left, and the public are beginning to learn that the new methods have their disadvantages. Meanwhile the young manhood of the country is being warped to the earthy, and life is being honeycombed by deceit and dishonor. The bearing of this upon business methods is not difficult to read. Faith is as necessary in the bank and store as the church. That the danger is very real is manifest from the warnings given in the name of business by business men. This sentiment found expression recently in an editorial in the *Evening Journal*, Ottawa, which dealt with a local instance. The same week Toronto furnished an equally pertinent text. Here is the newspaper's warning:

"The greatest danger of the time on this continent is the idea that money overtops everything else—that a successful money-maker is by the mere fact of success, the right kind of a man—that character, honesty, ability, merit, all mean little without money, and that money without them is better than any or all of them without money. This is the great threatening curse of a commercial, peaceful and democratic continent. Rank and title have their value in the old world as antidotes or checks to that sort of evil, but in this hemisphere we must rely on the homes and the schools, the churches and the press, to set up better ideals than money, or else honesty is going to have a hard time everywhere to hold its own against money—and if honesty goes to the wall, every other decent sentiment in the community will follow."

Don't Touch Wires.—The standard maxim of the electrician, "Never touch a wire; it may be dead, but if it ain't, you may be," is generally followed, so far as actually touching the wire with the hand is concerned; but several recent accidents have taught the public that they must be just as careful to avoid contact between electric wires and any conducting material held in the hand. Not long ago a mechanical engineer, who was inspecting the third rail system at Hartford, accidentally touched the conductor with his umbrella, which had a steel rod. The umbrella was badly burned, and its owner had a lesson in electrical conductivity that he will not soon forget. A similar incident is reported from a New Jersey town. Two brothers, standing arm in arm, were looking in a window, while one held an umbrella. He raised it a little, and as the steel tip came in contact with an arc light wire above, a shock was received that knocked both men over. In another accident the issue was fatal. A man carrying a steel rod umbrella, touched a live wire, which was lying almost out of sight near the edge of the pavement. He was instantly killed. His hand was burned to a crisp, and there were livid marks all over his body. The umbrella had transmitted the full power of an electric lighting circuit.—*R.R. and Eng. Journal.*

50 YEARS The Year 1897 Is the SEMI-CENTENNIAL

OF THE

Canada Life Assurance Company.

ESTABLISHED 1847.

President, A. G. RAMSAY, F.I.A.
Secretary, R. HILLS. Superintendent, W. T. RAMSAY.

DECISIONS IN COMMERCIAL LAW.

RE JOHN EATON COMPANY, LIMITED.—Upon an application to appoint as permanent liquidator of the John Eaton Company in a winding up proceeding, under the Dominion Act, Mr. E. R. C. Clarkson, the assignee, for the benefit of creditors, under an assignment executed by the company before the winding-up proceedings were instituted, and where the assignee had been appointed interim liquidator, on the order being made for the winding up, the Master-in-Ordinary, in giving judgment, said: "Certain evidence warrants me in disapproving in the strongest language allowable to judicial utterances, the attempted bargaining respecting the court appointments of liquidator and solicitor. Had I allowed the objection that the letters and interviews about that bargaining were 'privileged communications,' I would have made the court a condoning party to a proceeding known in outside affairs as 'log-rolling.' No privilege can be claimed or allowed by which any such bargaining respecting appointments of trust from this court might be concealed or condoned. And if ever similar efforts to promote or control such appointments here, should culminate in a bargain, I hesitate not to say that it will be my duty to use such judicial power as I possess, to free the court from the taint of complicity with such bargaining. It is no part of my judicial duty to consider how the newspaper controversy or the contentions in these proceedings may affect Mr. Clarkson personally or in his commercial relations with the business community. Disregarding the quarrels and antagonism displayed in this case, and giving weight to what the justice of the case requires, I must consider only the best interests of the creditors of this company, and the qualifications of the officer to be appointed liquidator. Were I to appoint some other person as liquidator, then the assignee and trustee in whom the estate and rights of action in this company have been vested, such an appointment would most probably lead to the antagonisms deprecated by many judges, practically illustrated here, and waste the assets of the creditors in prolonged litigation on questions of provincial or Dominion jurisdiction.

"Evidence has been adduced before me with the view of showing that Mr. Clarkson, the trustee for the creditors under the assignment, should not be appointed permanent liquidator. But I find that substantially the same facts as to Mr. Clarkson's previous connection with the company and the Bank of Toronto were before the learned judge who appointed him interim liquidator; and his decision on those facts cannot be reviewed by me. If Mr. Clarkson is unfit for the position of permanent liquidator, he was unfit for that of interim liquidator to which the learned judge appointed him. The possibility of dissensions continuing induced me to decline appointing two liquidators, and giving the chance of appeals to the court, not for direction merely, but upon the questions of antagonism, and thereby occasioning great expense and delay to the creditors of this company. Without considering further reasons, I think the best interests of the creditors will be conserved by my adopting the reason given by Mr. Justice Robertson in his judgment, that 'as the estate is now in the hands of Mr. Clarkson, under the voluntary assignment, I appoint him interim liquidator.' For the same reason, and others indicated above, I appoint him permanent liquidator."

JOHN BARBER.

Mercantile Summary.

A well known shoe manufacturer and merchant of Montreal, Mr. Jeremiah Fogarty, is dead.

The general stock of H. G. Laing, at Hespeler, has been sold to Amanda Laing, at 46 cents in the dollar.

A shipment of 7,000 pounds of fish from Lake Winnipegosis passed through Winnipeg last week for Buffalo, and similar consignments will be forwarded at intervals.

Debentures to the amount of $60,000 at four per cent. are offered by the city of Kingston. They are partly for the purchase of Fair grounds, partly for an elevator bonus, etc.

Because of a press of traffic the steamers "Hamilton" and "Sovereign," of the R. & O. N. Company are giving this week a double service between Hamilton and Montreal.

The Grand Trunk Railway needs more box cars. Their works in Canada will build 500 sixty-thousand-pound box cars, and a similar order for 500 has been given to the Detroit shops.

Dredging the middle ground in St. Clair river, opposite Sarnia, is active. The territory to be dredged is 250 feet wide and 1,800 feet long. It is proposed to obtain a depth of 22 feet of water.

The Customs receipts at Montreal last month were $633,546, as compared with $553,858 in September, 1896. The Inland revenue collected was $241,814, where in the previous September it was $193,934.

The Winnipeg *Free Press* says Mr. Robert Logan, formerly a private banker at Seaforth, Ont., having a branch at Glenboro, Manitoba, is looking for a location and intends to reside in the West in future.

At Merrickville, on Saturday last, the employees of the Union Bank branch, found evidences of a visit of burglars during the previous night. The safe door would not open, and there were burglars tools lying on the floor of the office.

Customs collections at Winnipeg, for September, amounted to $73,516 on dutiable goods worth $246,893, while the free goods brought in were valued at $62,756. All these sums are in excess of those of the same month in 1896. Exports were smaller, however, being only $206,574 in value last month, against $310,687.

A Quebec letter of Saturday says that the directors of the Baie des Chaleurs Railway have been able to raise money in London for construction on the strength of the guarantee given by the late Government, and building will be gone on with at once. The line will be opened to Paspebiac during the present autumn.

Ten or twelve days ago, at Vancouver, an application for bail was granted by Mr. Justice Bole in the case of Louis Nadelman, who had been committed for trial for defrauding his creditors. The bail was fixed at $2,000, personal, and two sureties of $1,200, or four of $600 each; but the amount not being forthcoming, Nadelman was forthwith lodged in the provincial gaol.

The traffic receipts for the week ending Sept. 12th, of fifty-five railways of the United Kingdom, with a mileage of 19,871, amount to £1,823,555, being equal to £91.15 per mile. For the like week of last year the receipts were £1,745,061, and the number of miles open 19,684, or £88.13 per mile. These figures show an increase in the receipts of £78,494, and an increase in the mileage of 187.

The figures of admission receipts at the Toronto Industrial Fair have been published. In the first five days the receipts were larger than last year; in the last five days they were less. the total being $74,736 taken this year, against $75,768 last year. Monday and Wednesday of the second week were the big days, $18 269 and $15,260 respectively was taken on them. But both corresponding days were a trifle bigger last year. It seems that while admissions through the gates were greater than in 1896, the falling off was in the afternoon grand stand and dog show receipts.

A million bushels of grain per day is what Buffalo boasts of having received in September. The figures are very remarkable. During the month of September there was received at that port 1,679,980 barrels of flour and 31,051,221 bushels of grain, an increase of 25 per cent. over the corresponding month last year. From the opening of navigation to close of present month the receipts at Buffalo have been as follows; Flour, 7,715,738 barrels; grain, 128,156,616 bushels. This is by far the largest amount of grain and flour ever received in that time at the great Lake Erie city.

A plan is mooted which shall consolidate the big paper and pulp mills of the United States. An organization meeting is expected at Glen's Falls this week. The mills interested in the consolidation are the Glen's Falls Paper Mills, the Otis Falls Pulp, the Fall Mountain Paper, the Niagara Falls Paper, the Ticonderogo Pulp and Paper, the Hudson River Pulp and Paper, the Montague Paper, the Turner's Falls Paper, the Olcott Falls, the Winnipegosis, the Glen, the Berlin Mills, and the Falmouth and Rumford Mills Companies. Total capital about $22,000,000.

A meeting of the creditors of E. F. Keene & Co., sawmill men at Keene's Siding, Que., In the Lake Megantic district, was held in Sherbrooke on Saturday last, at which liabilities were shown at $91,000, with a deficiency of about $30,000. Some of the creditors proposed insolvency proceedings, but the meeting was finally adjourned to permit of an offer of compromise.——A smaller failure in the same line is that of Francis Henley, of Reusseau Vallee, in the Gaspe district, whose principal business has been the getting out of spool wood in a small way.

A worthy man has been removed by the death of Mr. J. O. Wisner, of Brantford, one of the pioneers in field implement making in Canada. He lived to a good age, 86 years, and nearly half of it was spent in Brantford, where he was deservedly esteemed. Together with Mr. E. L. Goold, the deceased gentleman, who was an American by birth, built up a large and successful business. A dozen years ago, or more, the amalgamation of the Massey Company, A. Harris, Son & Company and the Wisner Company into one great agricultural machine-making company took place, when Mr. Wisner retired from the business.

The following retail grocery failures are reported in Montreal; Gonin Freres have assigned, owing about $5,000.——J. A. Dupras, in trade since the spring of 1895, has filed consent to assign; liabilities being stated at $3,903. ——B. Damien & Co. have assigned to the court, and owe $1,642. Mr. D. was previously unsuccessful in Riviere du Loup en bas.——A suburban dry goods retailer of Montreal, J. P. Lanoux, has arranged to pay his creditors 60 per cent. on liabilities of $6,549. He made an exactly similar arrangement on the occasion of his being burned out in February, 1895.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

CHATHAM'S tax rate this year will be about 22½ mills on the dollar.

THERE is talk in Brantford of an electric road thence to Paris, a distance of seven miles.

THE Verity Plow Company of Brantford, propose building a new factory in that city, to cost $40,000.

MANY of the Quebec shoe factories are running overtime to supply the demands of the jobbing trade.

THE Medman head and staving mill at Glenrae is being moved to Southwold Station, owing to scarcity of timber.

PEDDLERS in Springwells township, Ontario, will be charged $15 in future, an example which other municipal bodies could follow with advantage.

THE insurance on the broom factory at the Central Prison, Toronto, burned on Monday ? was $21,500, and on the binder twine factory $32,500, in fourteen companies. One-fifth of the total is on the building, and the remainder on machinery.

STREET vendors and peddlers, says the Fredericton *Gleaner*, are very prevalent in the city at present. The license collector has introduced himself to a few of them, but there are many others doing the city, who he proposes shall be made to pay the fee of $5 weekly, as provided by the city by-law.

WORD comes from Montreal that two banks, one of which is the City and District Savings Bank, have raised the rate of discount on call loans from 3½ per cent. to 4. Stock brokers were not taken by surprise on the announcement, for the money market has been showing a firmer tendency of late. It is not unlikely that a similar advance may be announced by several Toronto banks.

BERLIN is one of the most live and enterprising and progressive towns in Ontario, says our correspondent. New buildings and improvements on old ones are continually in progress, especially in the manufacturing line, for which Berlin is noted. The evidence of prosperity is seen on every side. Among the improvements and activities to the business block is that of the old firm of A. O. Boehmer & Co., Limited, dry goods, now the A. O. Boehmer & Co., Limited, who have lately extended their premises which are now 154 by 48 feet, and four stories high, which includes a millinery and other departments. They have been in business some 26 years.

FROM Victoria, B.C., comes intelligence that the seals of Behring Sea are migrating to the islands on the northern coast of Japan. The sealing schooner "Casco," returned to Victoria after ten months' cruise off the Japan coast, Coffee Islands and the Komandorski Island, brings news that seals are very scarce and scattered. While last season they were to be found in herds by the hundreds, as many as ten have not been seen together this year. Catches have consequently been very small. The "Casco" took altogether 1,064 skins, of which over eight hundred were taken on the Japan coast. None of the Victoria schooners on the Japan coast have made a big catch this year.

A DEPUTATION of citizens of Cornwall have visited Ottawa to ask the Government to lease to that town a patch of land, about twenty-five acres in all, on the south side of the canal, just west of the town. This land is to be leased to a manufacturing company, who are considering the establishment of a large industry in Cornwall.

THE Paris Roller Mills, of Paris, Ont., have been purchased by Mr. W. H. Meldrum, of Peterborough, from Messrs. Crane and Baird, the well-known flour and grain exporters of Montreal and Toronto. Messrs. Wm. and J. G. Greey, the mill furnishers, will install a complete new plant, of 200 barrels capacity on the plan sifter system. It will be completed by the 15th of November.

A SERIOUS CONFLAGRATION.

An unusually long period of dry weather for this season of the year has prevailed throughout Canada, and has been the cause of disastrous fires in different parts of the country. In the eastern portion of Manitoba the ordinary prairie fire guards were of no avail. Human forethought could not prevent loss in the gale of wind and fire. In the neighborhood of Beausejour many of the settlers are reported homeless, and about a half dozen lives were lost. Cattle, sheep, and horses were also corralled in the flames and many died. South-west of Winnipeg and in other parts of the province, thousands of tons of hay have been destroyed. A farmer near St. Charles is said to have lost about $3,000 in grain implements, etc. Another fire started west of Bagot and destroyed J. C. Lowrie's store, McMillan's elevator, and 20,000 bushels, with several box cars, and a number of houses were burned. Another serious fire was started in the bush near Casselman, a village of about 700 inhabitant, on the line of the Canada Atlantic Railway, south-east of Ottawa, and completely destroyed the greater portion of the place, leaving about one hundred families homeless. Among the more valuable properties destroyed were: Mr. A. McLennan's saw-mill and some two million feet of lumber. His loss is $12,000. Mr. J. N. Coupal, flour and lumber mill, a loss of $15,000; Casselman Cold Storage Company, building and stock, $8,000; insurance, $4,500; filled with cheese and meat. E. N. Hurtubise & Co., general store, loss $3,000; J. Benoit, general store, dwelling and warehouse, loss $15,000; insurance, $8,000. Pelon Bros., general store, loss $10,000; partly insured. P. Bissonette, general store, dwelling and warehouse, loss, $10,000; G. A. Guertin, foundry and dwelling, loss $5,000, partly insured. Jos. Charlebois, hotel, loss $3,000. Besides these there are probably a dozen or more stores burned. Among the churches burned are the Roman Catholic, valued at $12,000, and the Presbyterian, $2,000. South Indian, about eight miles nearer Ottawa, lost by fire about sixty houses, two saw-mills and two small stores. Four lives were also destroyed. Cheney, a small village on the Rockland branch of the same railway, is wiped out, including the station, saw-mill, and several thousand cords of wood.

WHOLESALE TRADE ONLY SUPPLIED

Mercantile Summary.

Examinations of the Institute of Actuaries will be held in Montreal and Toronto on Friday and Saturday, April 22-23, 1898. The supervisors in Toronto are A. G. Ramsay, F.I.A., and Wm. McCabe, F.I.A.

It is reported that American hardware is likely to supplant English and Continental manufactures in Australia, both as regards prices and its adaptability to customers' requirements. In barbed wire, axes and files they have had the advantage for some time, while their wire nails, edged tools, wood handles, coach furniture, steel boring bits and tubing are rapidly supplanting those of their competitors. Furthermore, the Americans are using English trade terms in order to monopolize this class of goods, and are successfully catering to their customers' requirements in every case. A few months ago the first shipment of pig iron was delivered, since when several quantities have followed suit.—*Hardwareman*, London, Eng.

From the opening of navigation to September 25, says the *Star*, the aggregate shipment of corn, wheat, peas and oats from the port of Montreal was 17,408,141 bushels, as against 12,061,459 bushels for the corresponding dates last year. This is an increase of 5,346,682 bushels for the present season. In detail the shipment of these four products of the soil are as follows: Wheat, 5,289,867 bushels; corn, 7,260,287 bushels; peas, 1,283,945 bushels, and oats, 3,574,042 bushels. When the figures are thought over and digested, there are good reasons why the shipping men are lodging no complaints for lack of cargo, and a general air of prosperity pervades the city. Not the least interesting point in this influx of trade which Montreal is now enjoying is the very heavy cargoes being shipped. For instance, the "Arabian," of the Hamburg-American line, which vessel unfortunately went aground just above Quebec recently, had on board 213,000 bushels of grain. The "Glenarm Head," now on her voyage to Belfast, took out from this port 90,000 bushels of wheat, corn and peas. The "British Trader," sailing on Sept. 21, had on board 81,000 bushels of wheat and corn, and the "Rossmore," which sailed on Sept. 22 for Liverpool, had in her hold 83,000 bushels of wheat and corn. The "Ormidale," on her last trip had taken 108,000 bushels of grain, besides some 6,000 sacks of flour. The "Madura," which vessel sailed on Sept. 7, had the following cargo on board: Peas, 51,000; barley, 53,000; wheat, 47,000; and corn 14,000 bushels. This enormous shipment was made by Crane & Baird, of this city. The steamship "Montcalm," clearing for Bristol on September 16, had a cargo consisting of 149,000 bushels of wheat, corn and oats, while the "Parkmore," for London, sailing a couple of days later, had 58,000 bushels of corn among her cargo. The Allan liner "Brazilian" sailed on Sept. 14 with 78,000 bushels of wheat, corn and oats, and the "Carlisle City" sailed for Antwerp and Hamburg with 81,000 bushels of grain on Sept. 8. The steamship "Merrimac" cleared on Sept. 11 with 77,000 bushels of wheat and 43,000 bushels of corn under her hatches.

GRAND TRUNK RAILWAY SYSTEM

GRAND OPENING OF

The New Single Arch Steel Bridge

Over the Niagara River at Niagara Falls.

THURSDAY, FRIDAY and SATURDAY, SEPTEMBER 23rd, 24th and 25th, '97.

Three red letter days in the history of THE GRAND TRUNK RAILWAY SYSTEM, when this grand achievement of bridge-building will be formally opened to the general public.

EXCURSION FARES will be granted from all points on the whole System, Chicago, Toronto, Quebec and Portland, and a grand programme of amusements will take place on the whole three days, and on the evenings of September 23rd, 24th and 25th a grand illumination of the BRIDGE and River. Some of the finest bands of both countries have been engaged for this occasion. Programmes, giving full details of this magnificent affair, which is expected to excel anything hitherto in this line, will be issued in a few days. The whole affair will be under the supervision of an expert manager.

Toronto Offices: 1 King St. West, Union Station, North and South Parkdale and Queen Street East.

Mercantile Summary.

A YOUNG hatter and furrier, W. F. Mills, of Brockville, Ont., has been obliged to assign. He started last year, receiving some assistance from his father, who is in the same line of business in Ottawa.——From Ottawa we hear of the failure of E. Ackroyd, for quite a number of years engaged in making ladies' underwear and kindred goods.——Charles Cook, who started a furniture business in the same city in 1896, coming from Brockville, has also assigned.

A HOTELKEEPER, of Annapolis, Nova Scotia, J. D. Cameron by name, has made an assignment of his estate, making preferences of $1,480. He owes $3,200, and is said to show assets of $1,700.——J. Archibald, of Bedford, Que., sawmill, has been obliged to assign. He has apparent assets of $2,500, to pay liabilities of $4,000, of which $1,500 is in the shape of a mortgage, and $900 preferred.——P. Drouin, of Quebec, the proprietor of a tobacco business, has assigned with an estimated liability of $1,000.——W. A. Phillips, a bicycle dealer of the same city, has also become insolvent.

THE earnings of the Toronto Street Railway Company for the past year, with the city's percentage, have been tabulated by the city treasurer:

Term.	Gross Earnings.	Percentage to city.
Sept., 1894, to Aug., 1895, inclusive	$965,772	$77,260
Sept., 1895, to Aug., 1896, inclusive	988,800	79,104
Sept., 1896, to Aug., 1897, inclusive	1,020,215	82,021

There is thus a steady increase in gross earnings and an increase in the amount received by the city. The earnings for September, 1897, also show an increase over the same month in previous years:

Sept., 1895............	$106,533 40	$8,522 67
" 1896............	106,529 58	8,522 36
" 1897............	114,223 38	9.137 87

IN June Arbuthnot & Adamson, printers, dissolved partnership in this city, and the business was then continued by Arbuthnot Bros. & Co. Last July the concern was merged into a joint stock company, with $45,000 nominal capital. This evidently did not help them financially and now they assign owing $12,000.——Early in 1896, Hobberlin Bros. sold the eastern branch of their clothing business to Geo. Duffy, the purchase amounting to $3,000. One-half of this sum was paid in cash by money obtained through property belonging to his wife. Now he asks creditors for a reduction of their claims.——A compromise has been arranged with the creditors of J E. Casson, grocer, at 25 per cent. cash. A couple of weeks ago we mentioned his troubles.

WIGLE & Co., are successors to the old business of Solomon Wigle, who failed as a general storekeeper, at Leamington, in Jan., 1891. The present firm is composed of Everett and Russell Wigle, sons of Louis Wigle, who was connected with the old business at the time of the failure. They have been hampered with too much real estate, consequently they have been slow in meeting their payments for some time, and now assign.——In April, 1893, John Leece purchased the grocery and bakery business of M. H. Walker, Hillsdale. Formerly he was a farmer with 100 acres, valued at $2,500, and mortgaged for nearly half this sum. Now he assigns, and probably the best thing he can do is to rent a farm and carry on a business that he understands.

Position Wanted By man; expert accountant and office manager, thoroughly experienced in correspondence, credits and management of sales. Reliable and energetic; age 29. Exceptionally good references, and satisfactory reasons for wishing to make change. Address Box 459, Monetary Times, Toronto.

DEBENTURES FOR SALE

$150,000 Bonds of the Victoria Rolling Stock Company of Ontario, Limited.

Payable from one to ten years, bearing interest at 4 per cent. per annum, payable half-yearly. For sale to yield 4½ per cent., amounts and due rates to suit purchaser. Bonds $1,000 each.

$6,045.25—Debentures (City portion Local Improvement), payable in 20 years from 2nd July, 1897.

$23,100—Debentures (Debt Arrangement), dated 31st December, 1897. $1,700 payable 31st December, 1918; $18,500 payable 31st December, 1919; $2,900 payable 31st December, 1920.

The highest or any tender not necessarily accepted

For further particulars apply to

F. C. IRELAND,
City Treasurer.

INSTITUTE OF ACTUARIES

STAPLE INN HALL, LONDON

COLONIAL EXAMINATIONS

Notice is hereby given:

1. That the Annual Examinations of the Institute of Actuaries will be held in the Colonial centres, Melbourne, Sydney, Adelaide, Wellington, Montreal, Toronto and Cape Town, on Friday, 22nd April, 1898, and on Saturday, 23rd April, 1898. In the case of Candidates submitting themselves for examination in both sections of Part III the Examination will be continued on Monday, the 25th, and Tuesday, the 26th April.

2. That the respective Local Examiners will fix the places and hours of the Examinations, and inform the Candidates thereof.

3. That the Candidates must give notice in writing to the Honorary Secretaries in London, and pay the prescribed fee of one guinea, not later than 31st December, 1897.

4. That Candidates must pay their current annual subscriptions prior to 31st December, 1897.

(By order) FRANK B. WYATT, A. F. BURRIDGE, } Hon. Secs.

A. G. RAMSAY, F.I.A., and WM. MCCABE, F.I.A., } Supervisors in Toronto, Canada.

McKeller & McGaughey, hotel keepers, Rossland, B.C., have assigned. They have had but little experience.

In the spring of the present year, N. J. Nealis, of St. John, N.B., took over the clothing business formerly carried on by his father, who remained with him under salary, rather a reversal of the ordinary run of things. N. J. has already assigned, but shows a nominal surplus of about $1,000 over liabilities of $2,000.

Among small assignments in Manitoba are: Marius & Co., makers of macaroni, Winnipeg, who mortgaged their chattels in April last, and Jos. W. Lachambre, trader, St. Bonafice.——In Regina, Dawson & Co., general storekeepers, offer creditors 50 per cent. In the meantime the sheriff has made a seizure on a small claim of $100.

In 1880, Robert Stanley came from Port Hope to St. Catharines, where he opened a dry goods store. Eight years later he compromised at 75 per cent. Then in the fall of 1894, he was obliged to ask his creditors for more time. Two years later he assigned with liabilities of $16,000. The stock was then purchased by his wife at a discount of 39 per cent., payments spread over six months. She has had no better success than her husband, and also assigns.——Another assignment is that of David Goldblatt, merchant, Tara.

A chattel mortgage on the effects of the estate of John Coulter, Beeton, has been foreclosed, and the property will be sold in a week. ——Pierce & Misner bought the sawmill property of R. W. Mutchmore, at Providence Bay, in June, 1896, paying about $1,000 thereon. It appears that they did not prosper, for we find in Feb. last they mortgaged their chattels, and the following month repeated the operation. Now they assign, and creditors need not expect a big dividend after these mortgages are satisfied.——Rob. Bracken, lumberman, also assigns at the township of Robinson in the same district.

It is more than twenty years since George Giller opened a store in Berlin. Since then he has made several changes. At one time he prospered, but since the dull period set in he has found business a source of losses and is obliged to assign.——Another failure is that of a young Englishman named F. C. Dance. cabinet-maker, Fergus, the result of lack of capital.——Other assignments are J. A. Simpson, cigar jobber, Guelph, who mortgaged his stock a month ago, and a shoe dealer named Thos. Holsham, Niagara.

The suit of the Bank of Toronto against the insurance companies which refuse to pay the insurance on the John Eaton stock destroyed by fire on May 20th, developed a sensation in the civil assize court. B. B. Osler, Q.C., appeared for the companies, and asked for an adjournment on the ground that his clients had not had time to complete the examination of the John Eaton Company's books. A sensation was created by Mr. Osler by a statement that his clients could show that in the stock sheets, prepared on August 1st, 1896, upon which the John Eaton Company based its claim, that on the day of the fire the stock was valued at $267,000, there were repetitions and duplications amounting to over $60,000. Affidavits were put in to support this statement. There were two, and both significant. The first was that of D. C. Edwards, the insurance adjuster. That gentleman swore that Richard Baker, formerly a manager for the John Eaton Company, and who is a material witness in the suit, is in the general hospital. He is the man who had charge of the preparation of the stock sheets of Aug. 1st, 1896. The second affidavit was a startling one, and was made by A. C. Neff, accountant, of Toronto It was to the effect that he had examined th. books and papers of the John Eaton Company, and in the course of his examinations he had discovered that a large number of items had been repeated in the stock sheets. This had been done to such an extent that, in the several departments examined, repetitions were discovered to the amount of about $69,000, and there are still some 20 departments to examine. The reading of these affidavits caused a profound sensation in court, which was heightened by a tilt between the two lawyers. Justice MacMahon said he would traverse the suit to the next assizes, and Mr. Osler stated that he would be ready to go on in three weeks time.

CONSUMERS' GAS COMPANY

The annual general meeting of the stockholders of the Consumers' Gas Company of Toronto, to receive the report of the Directors and for the election of Directors for the ensuing year, will be held at the Company's Office, No. 19 Toronto Street, on

MONDAY, 25th OCTOBER NEXT

At 12 o'clock noon.

W. H. PEARSON,
General Manager and Secretary.

Toronto, 28th Sept., 1897.

The McClary Manufacturing Company, of London, have in contemplation, we understand, the erection of a factory at or near Montreal, for making hollow-ware.

The detectives who are working on the Dominion Bank robbery at Napanee seem to think that they have some clue, and have arrested W. H. Ponton, teller there. Ledger-keeper W. D. Durand and Messenger W. H. Green have been transferred to other branches of the bank.

We understand that Messrs. Bresse & Co., boot and shoe manuacturers, Quebec, propose to settle with their creditors at 60 cents in the dollar, a cash payment of 20 cents and 13 1-3 cents in three, six and nine minths. One of the inspectors is understood to be in favor of the settlement. If accepted the payments must be secured.

Some years ago Mr. Lingham, Belleville, went to South Africa, where he made considerable money and returned to Canada. While here he and some other parties became associated in the milling business. After making a tour among the largest mill manufacturers in the United States they finally ordered from Messrs. W. & J. G. Greey, millwrights in this city, machinery for a 200-barrel flour mill, and a 100-barrel corn mill. The balance of the machinery for these was shipped this week to Delagoa Bay. When these mills begin work President Kruger's subjects can have some first-class flour to bake if they have any good hard wheat to grind.

STOCK TRANSACTIONS.

The week's transactions on the Toronto Exchange were as follows; Commerce, 338 at 137-137½; Imperial, 249 at 190½-191½; Ontario, 192 at 99¾ 100; Hamilton, 35 at 170-175; Toronto, 25 at 233½; Dominion, 30 at 258; Standard, 20 at 175; Brit. America, 142 at 129-129½; Western Ass., 816 at 168¾-169¼; General Electric, 60 to 92; C.P.R. stock, 2,370 at 76½-81¼; Toronto Electric, 472 at 140¼-141⅝; Commercial Cable, 1,625 at 180-183⅞; Commercial Cable reg. bond, $50,500 at 105-105¼; Commercial Cable, coup. bonds, $1,000 at 105; Can. N.W. Land pref., 208 at 52½-53½: Toronto Ry., 90 at 82¼-84; Montreal Pass. Ry., 50 at 226½; Bell Telephone, 213 at 172; Consumers' Gas, 15 at 208-210¼, xd; Ont. and Qu'Appelle, 112 at 48½; Can. Perm., 21 at 124, 10 (20 per cent.) at 108; Building and Loan Ass., 55 at 70; London and Can., 215 at 95; Farmers' Loan, 10 at 85; Cent. Can. Loan, 32 at 125; Manitoba Loan, 50 at 50; Can. Landed and Nat. 7 at 111.

Debentures.

Municipal Debentures **bought and sold,** also Government and Railway Bonds. Securities suitable for Investment by Trustees and Insurance Companies and for Deposit with the Government, always on hand.

TORONTO, FRIDAY, OCTOBER 8, 1897.

THE SITUATION.

Success crowned the resolution of Toronto to honor the Premier of the Dominion in a non-partisan spirit. The civic reception and the Board of Trade banquet equally passed off without a jar. At the Board of Trade dinner Sir Wilfrid Laurier defined the policy of the Government on the question that was uppermost in men's minds. He simply does not believe in the possibility of obtaining for Canada legislative preference in Great Britain, and does not propose to waste any time in what he regards as a useless effort. But, at the same time, he believes it possible to reach the British market at less cost of carriage than other outsiders whom we must meet there as competitors. The distance is less from Canada than from the United States, and "it must be [made] the cheapest route from America to Europe." In the past, it has happened, though not so much recently, that for a series of years together, the rates of ocean freight from Quebec to Europe were higher than from New York. The question of carrying produce inland from the North-West and across the Atlantic is one, and the Premier takes both branches of it into account. The fast line of Atlantic steamers bears some relation to the question of freight, though that line must be primarily for passengers. In this connection, Sir Wilfrid was enabled to announce, with some dramatic effect, that after all the predictions of the failure of Peterson & Tait, the deposit required for the fulfilment of the contract had been made. So far as the new line will be a freight carrier, the advantage of making the trip between Quebec and Ireland in five days, will be decisive. A preference to British trade the Premier promises, but it will be a preference not inconsistent with extended trade relations with other countries. Our trade relations with the United States, he declared, will run on lines selected by that country; if their policy be liberal, our Government will reciprocate, and the same course will be taken here, though with reluctance, if the policy of the Washington Government be the reverse of liberal. Before concluding his speech the Premier announced that the Government, following the example of England, first set in 1891, will insert in every Government contract a provision designed to make impossible the farming out of the contract, "and to make it imperative that every man working for the Government shall receive a fair day's wage, according to the rate which prevails."

Discrimination in favor of American carrying interests, finds an advocate in Senator Elkins, on whom suspicion, at one time, fell as the smuggler of section 22 into the tariff bill. That section, so far as it may have been intended to have a bearing on Canada, became defunct through the construction of the Attorney-General of the United States. Senator Chandler lets the public know that Senator Elkins will, at the next session of Congress, move to obtain discrimination in favor of American ships "by charging extra duties on imports into the United States in foreign ships." This would be more sweeping in its operation than clause 22 of the present tariff could, in any view of the facts, have been intended to be. On that account it will be more difficult to carry; but for the same reason the force at the back of the new move will be the stronger. On the authority of Senator Fry the statement is made that this force comprises a committee of twenty-five of the leading ship-owners and builders, including the Pacific, the Atlantic and the lake interests, the Cramps, the Clyde company, Hyde Ford, Arthur Sewell, and the Lake Carrying Association. Its lobby force will consist of able counsel. It was by employing counsel that this organization secured the presence in the platform of the Republican party of a plank promising discrimination in favor of American shipping. If the shipbuilders money got the plank made part of the platform they will doubtless be ready with another instalment when Congress is asked to make the promise good. The promoters of the measure could not have felt sure of their ground when they found it necessary to smuggle clause 22 into the tariff. On their present plans the light of day will shine. Discrimination makes no visible advance in public favor.

The first stage of the Tarte-Grenier libel suit ends by a verdict for the plaintiff. The next will be an appeal to a higher court to quash the verdict. The grounds of the appeal are found in the ruling of Judge Wurtele, expounding the law and excluding evidence offered by the defendant's counsel. The libel contained 33 different charges, and the judge instructed the jury that unless every one of them was proved, the verdict must be for the defendant; in another case another judge thought it sufficient if the truth of the alleged libel should be substantially proved; it would not be necessary to prove the truth of every item. The point cannot therefor be said to be settled, and it remains to be seen what view a full court will take. What may be called the major charge in the libel, as far as general terms can be libellous, was that the prosecutor was a "boodler." The word, borrowed from the vocabulary of slang, is of recent coinage, and its meaning may admit of shades of difference. Is it necessarily confined to the taking of public money for an unlawful purpose? Under this general charge the counsel for the defence felt warranted in offering evidence, which the judge refused. Whether the refusal was justifiable is a question to be decided on appeal. There are questions of morality, outside the jurisdiction of the courts, on which the public will pronounce its own verdict, and on which there is practically no difference of opinion. If we admit that any one may receive money for influencing members to refrain from opposing a particular measure in Parliament, we must be prepared to cancel all the censure that has been passed upon a corrupt lobby at Washington, Albany, or elsewhere, and this, public opinion in this country is by no means prepared to sanction.

Mr. Collingwood Schreiber, when in San Francisco the other day, was quoted as saying that the construction of a railway from Vancouver, or some point on the Canadian Pacific, east of that place, to Dawson city, would not be a very difficult or expensive undertaking. Two surveys, according to the same authority, are being made north of the Canadian Pacific with this object in view, one of them by the Government. To get a good rail and water route, it is added, only 90 miles of railway are necessary. It is impossible to judge of the value of statements of this kind without some details about the route to be traversed, and here we have none. The means of getting to the Klondike, if its fabulous wealth proves real, as most likely it will, will become necessary; but, at least, one of the means of doing this—the route via Chesterfield Strait—is utterly illusory. A practicable route via Edmonton will probably be found.

Speculation is busy on the effect of the Cuban situation, which a change of ministry at Madrid, makes possible. Conditional autonomy for Cuba is discussed as one of the possibilities of the new conditions. The rebels have been vehement in declaring that they would accept nothing short of independence; but this demand they are said to be now prepared to abandon in favor of some scheme of autonomy. But even so; who is to pay the war debt, and who is to make the tariff? Can the debt created by the rebels be wiped out? Will Spain permit it to be a charge on the revenues of the island? The talk of Cuba buying her independence finds no response at Madrid. It has been said, that if guarantee for the payment of $100,000,000 were required by Spain, it would be forthcoming. Who would come forward as the guarantor? The sum named is exactly the amount which President Polk authorized the American minister, at Madrid, to offer, years ago, for the island. A guarantor would be practically in the position of a mortgagee. Plans of autonomy which look to Cuba assuming the war debt of Spain are scarcely practicable. Report says that Premier Sagasta will negative the hopes of those who favor a customs union between Cuba and the United States, and that such a measure will be resisted to the last extremity. What are the conditions, if any, on which Spain will consent to withdraw her troops from Cuba?

On the accession of Sagasta to power, the unexpected has happened, as regards Cuba and the United States. From the Spanish Liberals the Washington Republic cherished vague notions of radical changes in the policy to be observed towards Cuba. Sagasta, in an interview with the *N.Y. World's* correspondent, distinctly rejects American intervention in the affairs of Cuba. "No Spanish party," the premier says, in so many words, "certainly not the Liberals, could consent to foreign interference in our domestic affairs or with our colonies." The Washington Government has given Spain and the world to understand that there will come a time when, unless pacification takes place in Cuba, the United States will interfere; to that policy the word of two Presidents is pledged. Sagasta replies on behalf of Spain, that no government, could hope to induce the nation to accept such interference." But he is willing to grant autonomy to Cuba, "along the lines traced in the programme of the Cuban autonomists themselves." The autonomists are not the rebels in arms, but a distinct party, among whom considerable divergencies of opinion exist. The name can be claimed alike by Spanish Unionists and Separatists; but Sagasta does not apply the term to the latter; the two parties are essentially distinct, only running into one another at one point. The Separatists still talk of paying Spain an indemnity for independence, meaning, it is probable, without saying so, liberty to sell the island to the only possible customer. The tone assumed by the Sagasta Government is a notice to foreigners to keep their hands off Cuba. The warning can be appropriated only by one country, for no other has shown the least intention of interfering in the concerns of Cuba.

TORONTO ASSESSMENT.

A further decrease is shown in the assessment of Toronto for the year 1898; it amounts to $4,756,694, when there is an increase of nearly five thousand (4,937) in the population. The greatest decrease is in the value of land, the decline being from $63,305,119, in 1897, to $59,986,392 in 1898; the value of the buildings has remained without noticeable change, so has the amount of incomes, in which, indeed, there is a fractional increase; personalty is the next great item of declension after land, the decline being from $9,155,578 to $7,745,488. Even properties exempt from taxation follow the rule of land, and show a decline from $22,158,130 to $21,839,387. If exemptions could be abolished, the relief under the other heads of assessment would be considerable. But before this can be done, there must be a much stronger set of opinion in favor of the change than has so far been manifested. The decline in the price of land was the result of the collapse of the real estate speculation, which culminated in 1889; the next year the decline began gradually, increasing in after years, till, in the two last, thousands of lots have been sold for taxes, some of them not bringing enough to satisfy the claim of the tax-gatherer. Now, other embarrassed holders of real estate are calling on the corporation to forego their annual sale of taxes this year. Forced sales lower prices, and assessments have to conform to prices. This fact, to a large extent, accounts for the decline in the land assessment. But, on the other hand, if the deferring of the annual tax sales would prevent a further decrease of prices and land assessments, the city might lose in another way; it has happened before, and may happen again, that by deferring sales, the heaped-up taxes in some cases overrun the value of the land out of which the taxes are to come.

CANADIAN AND OTHER INSCRIBED STOCK.

An article in the latest issue of the London *Economist* remarks upon the return yielded to the investor of recent years by colonial bonds and stocks, as being better than that from most other securities in the London market. Whereas the yield upon consols is barely 2⅜ per cent. and upon some home corporation stocks only 2½ per cent., colonial inscribed stock can be bought to return an average of over 3 per cent. And a list of twenty-seven kinds of Australian, Canadian, South African and West Indian securities is given by the *Economist* as yielding over 3; while of the total list, embracing forty kinds, there are seven which at September prices yield 3, and only six yielding less than 3. The highest quotations, and, consequently, the lowest yields, are those of Canadian 3½ and 3 per cent. stocks and Ceylon 3 per cents, amounting to from 2⅝ per cent. to 2¾ per cent., while the Cape and most of the Australasian stocks stand at prices which give a return varying from 3 per cent., or a shade under, to as much as 3⅜ per cent. The whole of the Colonial inscribed stocks are spoken of as freely marketable.

One of the reasons for the comparative cheapness of Colonial Government bonds in relation to securities of the highest class, it is added, is that they are not open to the investment of trust funds. Attempts have been made to induce Parliament to remove this objection, but without success, the view having prevailed that the holders of Colonial bonds, apart from the few which are guaranteed by the British Government, have neither the means of checking the borrowings of their debtors nor the power of foreclosure or other forms of redress possessed by the holders, say of those Home Corporation stocks which come within the category of trustee stocks.

After referring to the uneasiness which the rapid piling up of debt by some of the colonies has occasioned in the minds of investors, and the alarm caused by the Australasian banking crisis of 1893, the *Economist* goes on to say:

> Both in Australasia and in Canada, however, the industrial outlook has greatly improved within the past few months, and a widespread feeling of hopefulness has arisen where there was serious depression not long ago. Of more importance to the holders, or intending holders, of Colonial Government bonds is the fact that in recent years the fresh borrowings have been upon a comparatively small scale, and have been mainly confined to the less developed colonies. There has been, in fact, an evident disposition among the Colonial Governments of late to live within their resources, and to withstand the temptation to borrow provided by the cheapness of money in this country. To some extent the policy of abstention may have been due to considerations other than those of economy and prudence, but whatever the cause, the result cannot fail to impress investors. The longer such a policy is pursued, the greater will be the improvement in the credit of the colonies and in the value of the securities they have to offer.

The article concludes by directing the attention to Colonial Government bonds. Thus, in the meantime, as we have said, Colonial Government bonds are worth the attention of investors who are not confined to trust stocks, and who at the same time are not prepared to run any but very reasonable and moderate risks.

THE PROBLEMS OF THE LUMBER TRADE.

There is an aggregate capital of not far from $100,000,000 invested in Candian industries dependent upon the supply of wood for their existence. The employers of labor in these industries pay out every year more than $30,000,000 in wages, while they create annually wealth valued at nearly $110,000,000. There are, in addition, many industries which are in part dependent upon our forests for prosperity. Nearly one-fifth of the freight carried on the railways of Canada, and two-fifths of the freight passing through our canals, are products of the forest. The lumber and timber industries are of national importance and well deserve to be conserved by our Governments.

Since the passing of the Dingley bill in the United States, by which a $2 import duty was placed upon sawn lumber, the Canadian lumbermen have declared that their interests were threatened with disaster. The mill owners of the Maritime Provinces, Quebec and British Columbia all have more or less convenient access to the markets of the United Kingdom and Europe. The lumbermen of Ontario, and more especially of the Georgian Bay district, are by the position of their supplies largely dependent upon the home markets and that of the United States. Shipments of sawn lumber from Canada to the American markets have been made unprofitable by the Dingley Law, and the mill owners have been compelled to seriously curtail their operations. While the Ontario mills are closed, or working short time, the Michigan mills are in a position to work to advantage on Canadian logs. Having closed their markets to Canadian manufacturers, the Americans are helping themselves to our natural resources with new avidity. The lumbermen of Ontario have asked the Provincial Government for relief, suggesting that an order-in-council be passed to the effect that all timber cut under license in Ontario be manufactured in the province. The reply of the Hardy-Ross administration is to the effect that—

> It has already been announced that the Government entertains the opinion that during the currency of the existing licenses such action as was proposed by the resolution of the meeting of August 17th, could not well be taken. I may say, however, that the Government is very carefully considering what policy should be adopted with reference to logs cut after the expiration of the existing licenses, and it is hoped that in a short time the public will be made aware of the course which may be determined upon.

Whether the Government has the power to subject present licensees to restrictive regulations such as are proposed, is a constitutional question as yet unsolved. The expediency of the provisions is another matter about which the politicians and lumbermen are not agreed. There appears to be no good reason, however, why the Government should not announce its intention to subject the licenses which will be issued next April to the condition that all timber cut under them shall be manufactured in the province.

Congress has provided that should Canada revert to the old arrangement, by which a $2 export duty on logs, balanced, in part, a $2 import duty on dressed lumber going into the United States, then Canadian lumber will be subjected to a $4 rate, retaining to the American lumbermen the advantage which they have under the present arrangement of free logs and sawn lumber dutiable at $2 per thousand feet. That Congress would meet the prohibition of the exportation of logs by a prohibition of the importation of sawn lumber is by no means certain. The tariff question was decided only after a prolonged struggle of rival interests, and many of the provisions were decided upon by close majorities. The Republican administration is by no means anxious to open up the much vexed lumber question and give the representatives in the Senate and the House of Assembly from the Eastern States another opportunity to put forth their pleas for cheap wood products. At the lumbermen's meeting in Toronto this week, Mr. Geo. Stephens, who was introduced as an American with mills in Canada, summed up the action of Congress after this manner:

> Who put in the clause? Michigan. They want free logs and $2 duty on Canadian lumber. Who fought for the duty? Michigan, headed by the Hon. Walter S. Eddy. And they got it. John Blodgett and some of those fellows knew how to fix that thing, and they did it. I hope that John Blodgett will hear that New York, New Hampshire, Rhode Island, all the New England States want free lumber, but Michigan don't. They want free logs and a duty on lumber.

Our American neighbors have been previously accused of attempts to play the game of "bluff" in their relations, fiscal and otherwise, with foreign countries. If the Ontario Government were to act upon Mr. Bertram's suggestion, so unanimously adopted by a representative meeting of Ontario lumbermen in Toronto this week, to the effect that "when new licenses are issued after April 30, 1898, a regulation be embodied in every license that all timber cut on the Crown lands of Ontario shall be sawn, made into square timber, or otherwise manufactured in Canada," then Congress would be compelled to show its true motives in the matter.

ONTARIO LENDING COMPANIES.

(*Continued.*)

We have now to notice the returns of companies having withdrawable as well as permanent stock, or having only withdrawal stock. Pages 32 to 43 inclusive of the Ontario Government return are devoted to these. Twenty-two companies are in the category. But we confess to being somewhat puzzled to find, as was said in last issue, certain companies in this list which have never hitherto been placed in the same class with such companies as the Globe, the Dominion Building and Loan, and the Canadian Mutual.

If it be proper to take out of the list of concerns hitherto known as regular mortgage loan companies the Star Loan Company of St. Thomas, the Canadian Savings and Loan Company of London, and the Ontario Permanent Building Society of Woodstock, and to place them in Group B of the present pamphlet, why should not the Huron & Lambton Loan and Savings Company, the Agricultural Savings and Loan Company, the Landed Banking and Loan Company, and the Dominion Savings and Investment Society be similarly transferred? If we take up the Return of Loan Societies to the Ottawa Government, we find that the four companies last named possess "accumulating shares," exactly as the Canadian, the Ontario, and the Star do. If, then, these seven are alike in this respect; if what are called "accumulating shares" in the Ottawa return are properly synonymous with "withdrawable stock" in the Toronto return, why should not all be placed indiscriminately together in the Provincial pamphlet?

Leaving this question to be answered by those most concerned, let us return to the twenty-two companies beginning with the Aid Savings and ending with the York County, described as having withdrawable as well as permanent stock. These owe collectively to the public $1,249,725 and to their shareholders $6,245,037. They have $2,154,754 in permanent capital stock, divided into $1,551,121 fully paid and $603,633 paid in part. Their withdrawable stock amounts to $3,173,596, divided into $1,063,681 prepaid stock and $2,109,915 instalment or accumulating stock. Ten of them have reserve and contingent funds amounting in all to $303,197. Eight of them have among their liabilities deposits of $936,349—$900,000 of which are in the hands of two companies, the Star and the Canadian Savings—and Canadian debentures of $216,460, about two-thirds of which are issued by the company last named. The liabilities of this group to the public are therefore not serious.

As to assets, there is to the credit of general borrowers among "loans on the security of real estate" the sum of $6,615,188; while the "real estate absolutely foreclosed' is placed at $78,161, and the lands "held under power of sale" at $72,712. Interest (due and accrued, we presume) $89,672; directors and shareholders' stock and other matters held as collateral stand at $308,000, and there is $219,541 cash on hand or in bank.

Among the miscellaneous information furnished in the return by these withdrawable stock concerns, we find that there was forfeited to eleven companies during the year $11,529; loans written off or transferred to real estate account by five companies, $126,023; net profits divisible among holders of prepaid or insolvent stock, $217,569, and the amount received from borrowers during the twelve months was $145,046 principal and $171,141 interest.

Sixteen of these companies answer the enquiry as to the rate of dividend they declared during the year, and six of them do not. The Birkbeck declared 9 per cent. on permanent, and 14 on withdrawable stock, while on different classes of shares the Canadian Mutual's rates were 12 per cent., 10 per cent. and 8 per cent. respectively. The Dominion Building and Loan Society looms up well in this list too, paying 7 per cent. on permanent, 11¾ and 10¾ on other stock, while the York County returns 9, and the Globe a modest 6 per cent.

Wishing to see what progress in extent of business had been made during the year by this class of companies, we took from the 1895 return the figures of the same 22 companies of this class as appear in Group B, with the exception of the Reliance, which did not appear in the 1895 return, and the Hamilton Homestead, which does not appear in the 1896 one, having failed in the meantime. Comparing the aggregate figures of twenty companies in each year, we find the following results:—

	Loaned during the year	Mortgage Investments.	
		In Ontario.	Elsewhere.
Twenty companies, year 1895..	$1,964,238	$3,635,521	$1,763,832
Twenty companies, year 1896..	2,137,779	3,728,251	2,186,251

The loaning business of 1896 is thus shown to have been about eight per cent. larger than that of the previous year, and while there is but a trifling increase in the mortgage investments of Group B in the Province of Ontario, there is a marked increase in that business "elsewhere," which means that these companies are lending in British Columbia. If we deduct the Ontario loans of the Canadian Savings, the Ontario Permanent and the Star companies from the total, two-thirds is gone, for these three companies have $2,189,000 out of the $3,635,000 loaned.

INTENSIVE CULTIVATION.

The scientists who visited Canada at the time of the British Association meeting had many words of praise to say of the institutions and industries of this country. But if all their comments had been favorable to Canada, we might well have had a suspicion that the visitors were speaking as guests merely, and not as men of science. Several geologists and agricultural experts, who, having visited different parts of the Dominion, from the Atlantic to the Pacific coasts, were asked what impressed them most *unfavorably*, replied, the lack of intensive cultivation of the soil, cultivation, that is, of areas of land in such a way as to make the most of them.

When a country is new and land is cheap, there is a tendency on the part of the farmer to take up as much land as possible. In the first settlements the lands occupied are invariably far more extensive than the ability of the settler to cultivate them. And even when settlement has been fairly well advanced in those districts where homesteads are no longer to be had for the asking, intensive cultivation is not carried on in Canada to anything like a degree that gives the best returns possible for land.

In France, according to authorities who criticize Canadian agriculture from this standpoint, the art of fertilizing the soil is carried to such an extent, that, in the case of tenant farming, the tenant usually reserves the right to carry the surface of the soil of his farm or garden away with him on the expiration of his leave. This is the more practicable in that country, because of excellent means of communication, the usual smallness of the lots cultivated, and the fact that the French peasantry seldom wander far from the neighborhood in which they were born. The returns from a single acre of land cultivated in the vicinity of Paris by the highest degree of intensive tillage often amount to eight or even tenfold more than the returns from an acre of land on a Canadian farm. The costs of this cultivation are certainly greater than that of ours, but are not, it is alleged, increased in proportion to the larger returns. The difference consists mainly in better profits to the cultivator.

Money expended in fertilizing the soil does not bring an immediate return. That is, the return is not completed in each year. The advantages in the way of better crops are extended over a considerable period, and it is in Canada and countries where tenant farming is not general, that the system of intensive cultivation ought to be carried on most satisfactorily. Farmers of what is now known as Eastern Canada complain that they cannot compete with the Western ones, who farm on so much more extensive a scale, and farm lands in Ontario have, in consequence, fallen materially in value. If the Eastern farmers are contented with their former returns per acre, it is true that competition with the West must be disastrous to their interests. But is it not possible that the lost ground can be more than regained by the adoption of more thorough and effective means of assisting the natural forces in the work of growing grain and other products of the soil?

THE FAILURE RECORD.

Less than three months remain of the current year, and unless unexpected disasters are in store for Canadian trade interests, 1897 will close with a fairly satisfactory record, so far as business failures are concerned. In the past nine months the total number of failures of corporations, firms and individuals in Canada was, according to *Bradstreets'* estimate, 1,501 as compared with 1,663 last year. The total liabilities were $10,653,212, contrasted with $12,262,862 a year ago. This represents a decrease of more than nine per cent. in the number of failures and 10 per cent. in the amount of the liabilities which they represent. This record indicating a healthier condition of trade is very satisfactory.

In the United States there have been 9,833 business failures during the past nine months, a falling off in number of 1,447, compared with the like period of 1896 of nearly 13 per cent. The larger percentage of decrease in the number of failures in the United States than in Canada, cannot be taken as an indication of greater prosperity in the American Republic; but rather serves to emphasize the numerous failures that took place there a year ago. In the past nine months there were 534 failures more than in the like portion of 1895, a gain of nearly six per cent., and almost as large an increase as contrasted with the corresponding total in 1894. The total liabilities of failing corporations, firms and traders in the United States since January 1st last amount to $118,484,000, compared with $171,350,000 in nine months of 1896, a decrease of $52,866,000, or more than 30 per cent., about two and one-half times the proportion of decrease in the falling off in number of failures.

The failures in Canada are fairly well distributed over the different Provinces, in proportion to their commercial importance. Ontario in the nine months of 1897, had 679 failures, representing $1,809,232 assets, and $4,224,322 liabilities, as compared with 535 failures in Quebec, with $1,523,641 assets, and $4,754,825 liabilities. In the nine months of the previous year 709 failures in Ontario represented $1,753,180 assets, and $3,891,212 failures, as compared with 665 failures, assets of $2,112,943, and liabilities of $6,066,695 in the Province of Quebec. It is interesting to note that although in both years there were more failures in Ontario than in Quebec, the amounts involved in the latter province have been, with the exception of the assets in 1897, greater than those in Ontario. The failures for the past nine months, compared with those of the same period, 1896, are distributed as follows:

	No. of Failures.		Assets.		Liabilities.	
Provinces.	1897.	1896.	1897.	1896	1897.	1896.
Ontario	679	709	1,809,232	1,753,180	4,224,322	3,891,212
Quebec........	535	665	1,523,641	2,112,945	4,754,825	6,066,695
New Brunswick	45	52	110,690	164,610	237,850	313,211
Nova Scotia ..	137	111	295,722	228,718	647,042	482,520
P. E. Island....	8	12	26,850	16,528	61,702	29,368
Manitoba......	38	20	205,207	139,575	405,729	272,301
Northwest Ter.	7	18	35,700	37,387	65,342	96,303
Brit. Columbia.	52	64	134,818	594,357	256,400	1,068,386
Totals, Canada	1,501	1,663	4,141,860	5,065,922	10,653,212	12,262,862
Newfoundland	14	12	17,850	18,622	39,100	42,866

GRAIN STORAGE FACILITIES IN WESTERN CANADA.

The key to the grain markets of Manitoba and the North-West is the possession of storage facilities. As a rule the farmers of the West have incomplete accommodation for the storage of grain. The dearness of lumber has prevented them from building more than sufficient shelter for themselves, their families, and live stock. The grain must as a consequence be shipped immediately by rail to the East or placed in the elevators of grain merchants. It is not an easy matter for the individual farmer to secure cars at the moment his wheat comes from the threshing machine, and, as a consequence, he is obliged to sell it to the owner of the elevators. This system of trading has given rise to many evils, and is detrimental to the best interests of the province.

Frequent complaints are made that the merchants have combined as to the prices which should be paid farmers for wheat, and strengthened by the possession of storage facilities, they are in a position to bear the market to suit their own convenience. From the "syndicate" headquarters, it is alleged, uniform instructions are sent to buyers throughout the country. In this way, competition on the part of the shippers, if not eliminated, is at least reduced, and the grower's do not get as much for their grain as they would had the trade been left to regulate itself. The Government has been asked to investigate this matter, and the complaints of monopoly have been numerous enough to justify Government action. It has been suggested that the grievances could be removed by the erection of public elevators by the Government, in which the farmers could store grain upon the payment of reasonable charges.

The farmers have in their own power the ability to remove the monopoly, if it exists, in a much more satisfactory manner, and at the same time obtain other substantial advantages by building farm granaries. The manager of the Ogilvie Milling Company, in an interview with the Winnipeg *Commercial*, points out many advantages to the farmer from facilities for storing grain on the farm. Where there is no farm storage everything has to stand until the grain is hauled to the elevators. Fall ploughing is delayed when the ground is in the best condition for this work; with farm granaries the wheat could be taken to the market after the ground was frozen and ploughing had become impossible. As soon as a farmer stores his wheat in an elevator, it is at once added to visible stocks, and the enormous increase of wheat supplies in store depresses prices. Thus the farmer directly forces the price down, against his own interests, by throwing his wheat into public storage. Farm granaries would give the farmer time and opportunity to clean his grain, and thus market it in a marketable condition. Railway freight is now paid on tons of seeds, which should be taken out of the wheat on the farm. As an instance, Mr. Thompson stated that they had taken out 181 bushels of seeds out of one car of wheat. This is a loss to the farmer of freight and dockage. These screenings would be available for feeding purposes on the farm. Business would, in the event of the general adoption of farm granaries, be more evenly distributed throughout the year, and there would be a better circulation of cash and less credit business.

—We made reference, a week or two ago, to the growth of the city of Ottawa in activity of business and in population. We now learn that during the past year the value of assessable property in that city increased by fully $900,000. As the assessment for 1897 amounted to $21,947,675, the present assessment therefore amounts, in round numbers, to $22,900,000. The population is now claimed to be 53,000, which is an increase of more than 1,800 within the twelve month.

IMPROVEMENT IN THE SHOE TRADE.

When things are at their worst they begin to mend; so says an adage. We are pleased to be informed of signs of "mending" among the boot and shoe manufacturers and dealers of Canada, in respect of the terms upon which they will do their business. Much irregularity has prevailed, for example, in the arrangements between Quebec shoe manufacturers and their customers, who are found among the jobbers of the West. And whether the terms on which the makers sold shoes were unduly advantageous to the buyers thereof, it appears to be now decided that they were disadvantageous to the Quebec manufacturers.

Purchases of footwear, although nominally made at four months, were dated ahead. Then the discounts given by the manufacturer to jobber were found to be excessive, since purchasers who did not pay for their goods for four months or even more, received a "discount for cash," which was surely misnamed. These arrangements, it is now resolved, must cease; the restricted profits of the manufacturers, and their heavy losses by bad debts will not admit of any such looseness. Hence, the Quebec makers have agreed to insist on shorter terms of credit, and to cease dating forward. No discount will now be allowed on purchases unpaid at a longer period than ninety days. The rate of trade discount will be 6 per cent. for 30 days; 5 per cent. for 60 days; 4 per cent. for 90 days. The move is one in the right direction.

PORK PACKING.

The winter pork packers will commence the season's operations in a few days, and packers are now discussing the trade prospects. A difference of opinion exists as to the probable supply of hogs in the country. At the present time the number of hogs available for the purposes of packers is apparently limited, but there is said to be a large quantity of small hogs which should be ready for the market within a month's time. Values at present are high, and no doubt packers will curtail their operations to the supply of immediate requirements. No stock will be put aside for the future until prices have declined, or until the season has been well established at present rates. Stocks of last season's pack are well nigh exhausted, and for some time past heavy meats have been imported from the United States in large quantities. Canadians have found a good market in the United Kingdom for hams and bacons at remunerative prices. The pork products of this country are in favor with British consumers, as the following comparative quotations made by a London, England, house, Sept. 18th, will show:

Bacon—Canadian singed Wiltshire, heavy to light	58/	to 60/
" " Long rib, light weights	none.	
" " Cumberland cut, light weights	47/	to 49/
" American Clear bellies in salt, heavy to light	38/	" 39/
" " Rib in bellies	35/	" 36/
" " Cumberland cut	34/	" 38/
" " Short clear middles	30/	" 31/
Hams—Canadian long cut, light	54/	" 56/
" American cut, heavy to light	39/	" 44/

The situation in the United States is reviewed as follows by the Cincinnati *Price Current*, September 30th:—

> At the close of seven months of the summer packing season the Western killings have reached a number not previously equalled in the eight months ending November 1. Last year the October killings were 1,500,000 hogs, and it is hardly likely the coming month will fall short of this number. This would mean a total of approximately 11,750,000 for the season, against 9,980,000 last year, which was the highest record. The situation in the South, under the influence of yellow fever conditions, has not lessened the interruptions to traffic, but to some extent such interference with distribution has been intensified. Otherwise the movement has been good, and export clearances of product for the week were large, of both lard and meats. Values of leading articles have had something of a declining tendency, and at the close Chicago prices for December, compared with a week ago, show a decline of 22½c. on pork, 20c. per 100 pounds on lard and 22½c. on short rib sides.

HOPS AND BREWERY SHARES.

A short crop of hops, partly by reason of a reduced acreage, and partly of blight, is having an effect not only upon the hop market, but upon the price of brewery shares in England. The annual report of Messrs. Wests, Jones & Co. predicts an advance in price for hops. They say that the plantations were early suffering from an attack of the aphis blight. The result is a moderate crop of about 175,000 cwts., consisting mainly of hops of an exceptionally good quality. The acreage on which this crop is grown shows an important reduction of 3,354 acres, the smallest acreage for nearly forty years past. The crop prospects on the continent, likewise, must show a considerable reduction, whilst in America the yield in the New York States is somewhat smaller.

The consumption of hops in England is placed at 700,000 hundred weights per annum, and the present home crop is estimated at 400,000. According to the London *Shareholder*, of 21st September, a Dublin writer attributes the recent decline in the value of Guinness ordinary shares to the reports respecting the hop crop and the likely substantial increase in price of this important constituent in their manufacture. The question is undoubtedly a serious one for most brewers, but less so for Messrs. Guinness than almost any other, says "L.S.D." In addition to the ample stock of hops, which from good crop years they are accustomed to hold, such a failure as is reported in the present season affects "bitter ale" brewers to a much more serious extent than brewers of stout, as the former require the finest quality. And it is the bitter ale brewers who are looking with most anxiety for trustworthy news of the hop market.

SOUTH AFRICAN GOLD PRODUCTION.

It will be remembered that the production of gold in the mines of the Rand, for July, was disappointing. That for August was better, he production of gold having amounted to 259,603 ounces in that month, compared with 242,479 ounces for the preceding month, and 213,418 ounces for the same month of last year. Last month's yield, therefore, shows an increase of 17,124 ounces over July, and of 46,185 ounces over August, 1896, while there is an improvement of t8,074 ounces upon the previous largest monthly aggregate obtained in June. Particulars of some of the mines are given in the London *Economist*, from which we gather that of the 17,124 ounces increase obtained in the past month over July, the Crown Deep contributed 5,496 ounces from its first "clean up," the Rietfontein "A" yield increased from 923 ounces in July, to 5,034; and the Glencairn, which resumed milling operations in July, with an output of 1,549 ounces, increased last month to 5,593 ounces, the three items amounting to 13,600 ounces. The other more important increases are those of 697 ounces in the May Consolidated, and 561 ounces in the Simmer and Jack.

INFORMATION ABOUT MINING.

A Vancouver paper of September 28th announces the return on that day of J. C. Keith from a visit to the Lardeau and Trout Lake districts. He reports a rich strike of pyrrhotite and galena in the Lardeau district, opposite the Halcyon Hot Springs. In some parts it resembles Rossland ore; in other parts there is fine galena. A good strike has been made on the Silver Cup, near Trout Lake. This property has been acquired, it is said, by the Horne-Payne syndicate, who have built a road to Trout Lake City from the mine.

A gold-bearing property in the Shoal Lake district of Northwestern Ontario has been sold at a good figure last week. The Rat Portage *News* says that the Monarch mine, owned by the Bullion Company, is sold to Toronto capitalists for $25,000. The Monarch is near the Mikado mine, and has several lodes, resembling Mikado ore. Some development has been done on the property in the way of stripping and sinking test pits, one of which is down to about 75 feet.

Advices of last week from Vancouver attribute to Mr. Haney, superintendent of construction of the Crow's Nest Pass Railway, that Mr. Jaffray and Mr. Ternie, manager of the coal mines, have arranged to at once put in machinery for the coal mines. The railway will have connection with the mines as soon as they are opened, and Mr. Haney is straining every nerve to get the road through to Nelson soon.

The produce of Rossland, Slocan, and Nelson mines in 1897 up to September 25th, is thus summed up by the Nelson *Miner*: Slocan via Kaslo, 23,066 tons ore; Slocan via Nakusp, 4,090 tons; Rossland via Northport, 9,327¾ tons; Rossland via Nelson, 52 tons; aggregate of ore, 36,535¾ tons. Total value $2,599,130, equal to an average of $71.13 per ton. There was shipped from the Hall Mines smelter at

Nelson, matte to the amount of 1,907 tons, and from the Trail smelter 4,104 tons matte, making 6,011 tons matte, the value of which is placed at $2,962,988. The total value of ore and matte exported in nine months of this year is thus $5,562,118, a showing worthy of remark.

THE SEPTEMBER FIRE LOSS.

The first month of the present year witnessed a heavier fire loss in the United States and Canada than in the same month of the previous year. Each succeeding month until September, however, gave a satisfactory decrease in the amount of losses by fire this year. In September, 1897, the losses amounted to $9,392,000 as against $8,200,650 in September, 1896. A comparison of the burnings during the past nine months is much more favorable, showing losses of $80,413,700 in the present year, and $90,088,700 in the corresponding period a year ago. The losses in the same nine months, 1895, were $96,277,900, making a more favorable showing for the present year. These statements as compiled from the returns of the *N. Y. Journal and Bulletin of Commerce* are as follows:

	1895.	1896.	1897.
January	$11,895,600	$11,040,000	$12,049,700
February	12,360,200	9,730,100	8,676,750
March	14,239,300	14,839,600	10,502,950
April	11,018,150	12,010,600	10,833,000
May	7,761,350	10,618,000	10,193,600
June	9,223,000	5,721,250	5,684,450
July	9,085,000	9,033,250	6,626,300
August	9,929,000	8,895 250	6,454,950
September	10,766,300	8,200,650	9,392,000
Totals	$96,277,900	$90,088,700	$80,413,700

THE LONDON WOOL SALES.

The fifth series of colonial wool sales, which opened in London, Eng., September 28th, has developed great strength in the market. There has been a large attendance of buyers and keen competition from all quarters, except America, to secure selections. On the opening day merinos sold 5 to 7½ and cross-breds par to 5 per cent. higher than the last series. Close Cape of Good Hope and Natal wool was practically unchanged, although prices for greasy were somewhat in sellers' favor. Queensland scoured and all New Zealand stock sold well.

Advices of later sales report that good stapled Australian merino ruled 10 per cent. higher than the last sales, while Cape of Good Hope and Natal greasy of a better sort was partially five per cent up. The short stocks give considerable assistance to sellers in their efforts to realize high rates.

A London letter of September 18th makes the following comparative estimate of the offerings:

	Stock expected Sept. 28, '97. Bales.	Actual stock Sept., 1896. Bales.
Sydney	30,000	60,000
Queensland	28,000	39,000
Port Philip	23,000	45,000
Adelaide	3,000	11,000
Tasmanian	1,000	4,000
Swan River	1,000	3,000
New Zealand	60,000	123,000
Cape	14,500	25,000
	160,500	310,000
Falklands and Puntas	4,000	4,000

The actual receipts, according to cable advices, were 170,000 lbs., or slightly in excess of the above estimate. The great development of the export trade in frozen meat from Australia has wrought serious havoc among the choice merino flocks of that country. Farmers prefer to grow the crossbred mutton sheep, rather than good wool sheep, and as a result there is a gradual but sure decrease in the production of the choice merino combing wool. The present series of sales in London is to end October 13th, the sixth series opening November 23rd.

HAMILTON BOARD OF TRADE.

At a meeting of the Hamilton Board of Trade, held on Tuesday last, the president, Mr. Findlay, in the chair, a number of matters came up for discussion, after the submission of the report of the treasury board, which showed that the liabilities of the board as at 30th June last had all been paid off, and that 156 members had paid their dues for the current year.

A motion by the president and Mr. Knox to memorialize the Dominion Parliament to pass an Insolvency Act for the Dominion was carried. The object of such an Act would be to provide for the equitable distribution of the assets of insolvent estates. The committee on fire insurance reported that all the recommendations of the board regarding alterations in and additions to the waterworks and fire departments of the city, with the exception of that regarding the purchase of a new fire engine, had been adopted by the city council.

A request was read from the Toronto, Hamilton and Buffalo Railway Company, that the board sign one of the petitions being circulated in support of the railway company's request for a bonus of $3,200 per mile, from the Dominion Government, for their line between Brantford and Welland. This received support, though not unanimously, from those present.

LONDON AND ONTARIO INVESTMENT COMPANY.

The brief report of this company is confined mainly to a statement of the income and expenses of the year and the disposition made of net profits. A paragraph is devoted, however, to mention of the probable effect of the bountiful harvest and the enlargement of the dairy industry. These point to the probability of "a new era of prosperity which cannot fail to stimulate and benefit business and financial interests of all kinds." Having received $154,524 interest on investments of $2,889,000, and paid out $86,144 interest on money borrowed on debenture, the company had, after paying office expenses, etc., the sum of $38,557 of net profit. Out of this $33,000 was distributed in the shape of six per cent. dividend, and $5,557 was carried to property suspense account. The former board of directors have been re-elected.

INSURANCE MATTERS.

It is not difficult to believe that Mr. W. M. Ramsay, general manager for Canada, of the Standard Life Assurance Company, stands high in the estimation of his staff; it is the most natural thing in the world. That body of men gave a further proof of their feeling towards their chief by presenting him, on his return from the Old Country, with an address in book form, most elaborately engrossed and beautifully bound. It was presented by Mr. Balfour on behalf of the head office, and by Mr. Hunter and Mr. Kerr for the field staff, and expressed welcome upon the return of Mr. Ramsay, satisfaction that his accident had not permanently injured him, and hope that the relations between his staff and himself might long continue. One of the sentences read: "We venture to predict that there are yet further and greater honors and successes in store for you, and that your name will long be remembered as an example of a noble character combined with conspicuous business talent."

The Royal-Victoria Life Insurance Company, has secured the services of Robert R. Maitland, as general agent for Manitoba.

A statement of the liabilities of the Massachusetts Benefit Life Association, at the date of the appointment of the receivers, was on October 2nd made public by the officials. It shows an aggregate of $1,100,710. The assets were made public some time ago, the figures given being $506,723.71, exclusive of $140,396.46 of nominal assets, from which the receivers think little will be realized.

Messrs. Woodworth and Lord, receivers of the company, have been in Ottawa this week, in the interest of the estate of the defunct association. The largest part of the nominal assets are said to be with the Canadian department.

THE BANKERS' ASSOCIATION.

The annual meeting of the Canadian Bankers' Association opened in Niagara Falls, Ont., yesterday afternoon, Oct. 7, in the Convention Hall of the Clifton House, with a good attendance of members. The chair was taken by the president, Mr. F. Wolferstan Thomas, at noon. Mr. D. R. Wilkie presented an address of welcome, to which Mr. C. McCuaig responded. Considerable routine business was then got through with, and Mr. H. S. Strathy and Mr. P. Bienvenu were appointed scrutineers. The report of the executive council was read and adopted.

The president, Mr. F. Wolferstan Thomas, in his annual address referred briefly to the currency question in the United States. He expressed his faith in the ultimate adoption of a single standard by the Americans, and with a process of gradual redemption of greenbacks and treasury notes, and the replacing of these by a circulation issued by the banks, not the Government, free of any tax, and under safeguards not very different from those of Canada. A more extended treatment was given to the new tariff legislation of Canada and the United States. Referring to the unfriendly attitude assumed by the United States to this country in passing the Dingley bill, Mr. Thomas said that in his opinion, without resorting to retaliatory measures, "we may in our aggregate trade obtain compensation in some other directions; for you may recall the fact that after the McKinley tariff had come into force our exports to the United States fell from $40,522,810, in 1890, to $38,988,027 in 1892, and $35,809,940 in 1894, while our trade with Great Britain, through efforts to secure new markets, rose from $48,359,694, in 1890, to $64,906,549 in 1892, and

$68,538,856 in 1894. The diminution in trade with the United States cannot but continue under the coal schedule of their tariff, which inflicts a tax of 67c per long ton on semi-anthracite and bituminous coal, an increase of 27 cents over the Wilson tax, or the schedule respecting sawed lumber, which imposes a duty of $2 per thousand feet, board measure." The importance of emigration was emphasized.

Referring to the forests of Canada, the president of the association said they should not close their eyes to the reckless waste of timber, at one time deemed inexhaustible. The Departments of Crown Lands in the several provinces should pay special attention to this matter. The wisdom of leasing Government lands for the purposes of exploration on a large scale, even when the *bona fides* was apparent, and the operators, men of experience from abroad, was, to his mind, an unsolved question.

The activity of the Express companies to extend the sale of money orders has brought about a feeling among bankers that their legitimate field is being encroached upon. The competition of the Government in Canada with bankers, has long been a matter for discussion in banking circles. Mr. Thomas dealt with this matter at some considerable length. Referring to the fact that the Government reserves the right to issue all notes under five dollars in value, he said:

"I have before me the Government return for July, wherein I find general banking assets of $338,000,000, a double liability fund of $62,000,000, as security and by preference, for a present outstanding circulation of $33,000,000. In other words, the public have $12 of security for every dollar of circulation issued by the banks. How anomalous, then, this restriction, which deprives the banks of power to issue $1s, $2s, and $4s, when the Banking Act gives them power to issue notes for $1,000 each and over. No wonder, then, that banks with authority to issue $12,000,000 of circulation stop short at five millions; and, similarly, banks with power to issue $6,000,000 remain below $3,000,000. Let us, when the time comes for reconsideration of our charters, be prepared to press our claims vigorously for a restora- of those rights which were deemed natural and fundamental before the Government entered the sphere of banking."

If insolvency measures were again introduced into Parliament, it was considered to be the aim of the bankers to see that the discharge clauses were very stringent in their nature, and to insist upon satisfactory evidence being produced to the judge in insolvency that the debtor has not failed to keep a proper set of books, or to fully dispossess himself of his estate to his creditors.

Several interesting papers were read before the association. Mr. Lash, Q.C., presented an instructive paper on "Endorsements." Mr. Graham Browne's paper on the "History of Interest Legislation" was a most able treatment of the subject. Two papers of much value were read on "Minor Profits in Banking," by Mr. G. M. Gibbs and Mr. G. DeC. O'Grady.

The election of officers resulted as follows: Hon. presidents, Lord Strathcona and Mount Royal, Mr. George Hague, Montreal; Mr. F. Wolferstan Thomas, Montreal; President, Mr. D. R. Wilkie, Toronto; vice presidents, Mr H. C. McLeod, Halifax; Mr. H. Stikeman, Montreal; Mr. Thomas McDougall, Montreal; Mr. G. A. Schofield, St. John, New Brunswick; executive council, Mr. E. S. Clouston, Montreal; Mr. D. Coulson, Toronto; Mr. Geo. Burn, Ottawa; Mr. M. J. O. Prendergast, Sherbrooke, Que.; Mr. B. E. Walker, Toronto; Mr. D. H. Duncan, Halifax; Mr. W. Farwell, Montreal; Mr. Bienvenu, Montreal; Mr. G. Gillespie, Mr. N. W. Fishe, Mr. H. S. Strathy, Mr. R. D. Gamble, Mr. E. E. Webb, Mr. J. Turnbull, Toronto. Acting Committee—Mr. J. H. Plummer, Mr. J. Henderson, Mr. E. Hay (re-elected). Auditors—Mr. T. Bienvenu, Mr. W. H. Nowers.

The annual banquet was a brilliant affair. The speakers were the Hon. J. D. Edgar, the Hon. Mr. Harcourt, Messrs. B. E. Walker, Wm. C. Cornwell and Edward Gurney, whose names are a sufficient guarantee of the excellence of the speeches.

TO CORRESPONDENTS.

An Eastern correspondent calls attention to the fact that in our recent notice of the Charlottetown meeting of the Maritime Board of Trade we did not give the names of the officers elected. We do so now. The following officers were elected for the ensuing year:

President, C. E. Bently, Truro.
First vice-president, Horace Haszard, Charlottetown.
Second vice-president, W. M. Jarvis, St. John.
Secretary-treasurer, G. A. Hall, of Truro.

J. M., Winnipeg.—A live subject, as you say, and one which we have by no means neglected, is our export trade via the Pacific. Your letter repeats in the main what has already appeared in at least two recent issues, THE MONETARY TIMES, 6th August, page 171, and issue of 20th August, page 235. Shall be glad to hear from you again.

THE CHEESE MARKETS.

The offerings of cheese on the Ontario boards this week have been unusually heavy; at 20 meetings 56,853 boxes were offered, as compared with 47,152 boxes offered at 17 boards last week. Prices have been well maintained in spite of the determination of a number of buyers to take no cheese at present values. For the week ending Oct. 2nd shipments from Montreal, according to the compilation of Messrs. Cunningham and Lemessurier, amounted to 91,507 boxes, as compared with 61,952 boxes in the same week last year. Shipments to date are 1,495,469 boxes, as against 1,168,220 to date last year.

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.

FOR DRY GOODS DEALERS.

It is announced that the Japanese Government will, as soon as the Diet meets, annul the law passed during the last session, granting a bounty to Japanese direct shippers of raw silk.

Among the dress materials suited to early Spring, writes a Paris fashion authority, is cashmere woven in two different colors, or in two shades of one color—a decidedly modern innovation in harmony with the marked inclination toward shot and glace weaves.

The great favor in which ribbons are held is already making itself felt in the European ribbon manufacturing centres, and reports from Basle state that mills there are filled with orders far ahead. Contracts on goods 40 lignes and above can only be placed for delivery by the end of February.

"At the openings this week," says the *N. Y. Economist*, Oct. 2nd, "many evening toilettes were shown, among which satin duchesse far outranked any other material; yellow and white were very prominent. Among the satin broches the designs were scroll or bayadere, the floral patterns having been shelved for a time."

Logical order in his replies is not always observed, even by the modern Boston schoolboy. Here is an answer not according to rule: Teacher says to Tommy: "Now, leather comes from the cow, and wool from the sheep, and wool is made into cloth, and cloth into coats. Now, what is your coat made of—your's, Tommy?" With hesitation, Tommy replies: "Out of father's."

A down-east paper tells a story of the most noted man in Auburn, Maine. He is "publicly known to have worn the same straw hat twenty-six summers, and the same cloth cap forty-two winters without a break for repairs or renovation." If this is economy, pray let us have a little cleanly extravagance. If this is conservatism, most storekeepers would turn liberals. With such customers as this their occupation would soon be gone.

There have been several important buyers' arrivals from Canada, writes the Manchester correspondent of the *Drapery World*, Sept. 25th, during the past week. Toronto houses are buying to a fair extent, and for Montreal there is steady business passing. South American orders for cotton hosiery have improved, although with the Plate there is not much doing, and many complaints are made as to the condition of business with Buenos Ayres. Heavy losses have been incurred of late by shippers to that market.

Paris is a glove market for the whole world. In the Swiss mountains kids are raised especially for this industry, and great pains are taken to have the animals killed while the skin is fine and soft. Tanneries at Millau, Annonay, Paris and Grenoble prepare them for the stitchers. But there are not enough kids raised in France to supply the great demand for gloves, and gamins of Paris find steady and profitable employment catching rats at the mouths of the great drains of the city to eke out the trade. Dogs, and even cats, contribute also, though supplying an inferior article of "kid."

The prospects of the India cotton crop of season 1897 are thus referred to in the Statistical Bureau memorandum, dated August 24th: "The area placed under cotton is everywhere greatly restricted, the rains having commenced generally too late for early sowings. The exhaustion of food stocks, too, and the high level of prices of food-grains, have induced cultivators to substitute such grains for cotton over wide areas. Re-sowings have been made wherever possible in the places where the early sowings of cotton failed, but the prospects up to date of report were not good in Madras, Bombay, and Berar. It seems probable, however, that the rain which has fallen since the date of the reports may have improved prospects. In the other cotton-growing provinces from which reports have been received—the Central Provinces, the North-Western Provinces, and the Punjab—prospects are good, excellent in the first-named, though the area is more or less below the average area."

Further consolidation in the cotton thread manufacture is on the tapis. With the accession of Messrs. Erwen & Roby, of Manchester, the success of the English Sewing Cotton Company is practically assured. The company named will embrace the following manufacturers: John Dewhurst & Sons, Limited, Skipton; Swanlove & Sons, Chesterfield; W. G. & J. Strutt, Belper; Sir Richard Arkwright & Co., Cromford; C. A. Richards, Bell Busk (sewing silks); Bagley & Wright, Oldham; Edward Ashworth & Sons, Bolton; Crawford Brothers, Beith (linen threads); J. & E. Waters & Co., William Waller & Co., and Marsland, Sons & Co., all of Manchester; J. T. Raworth, Leicester, and George Wigley & Co., Derby (sewing silks). Bagley & Wright, of Oldham, who are included in the amalgamation, purchased, eleven years ago, the business and trade marks of William Clapperton & Co., of Paisley, whose braids are well known in the Canadian market. The chairman of the directors of the new company will be Mr. Algernon Dewhurst, J.P., of Messrs. John Dewhurst & Sons, Skipton, while the trustees for the debenture-holders will be Messrs. J. P. Dewhurst, F. C. Arkwright, and G. H. Strutt. The amalgamation will be a distinctly strong one. It is understood, says the Glasgow *Citizen*, thatMessrs. Coats and their allies are well aware of the steps being taken for the formation of the new company, and do not regard it with an unfriendly eye. Stability of price will, it is hoped, result from the amalgamation, which will practically include all cotton-thread firms outside of the Central Agency.

FOR GROCERS AND PROVISION DEALERS.

According to reports from Seville, nothing definite can yet be said as to the outlook for the Spanish clove crop, as it is not yet time for an accurate estimate of the goods now in pickle.

Prof. Robertson is off to Grimsby again to get the fruit growers and shippers of the Niagara district of Ontario to take more pains in sorting and packing. Another lot reached Montreal in so overripe a condition that it was not fit to ship to Britain.

Advices by cable report a steady market for figs in Smyrna. Holders in England, according to advices, are declining to fill orders from continental buyers at the prices they have been accepting since the opening of the season owing to the prospect of an advance in the primary market.

Mails from Smyrna state that the market for Sultana raisins has recovered somewhat from the late decline, and is now tending upward, owing to the renewed demand and prospects of a smaller crop than was expected. The "North Cambrain," with 35,000 boxes, is expected to arrive in New York about October 20th.

Mr. W. G. Reid, Hamilton, on Oct. 1st, shipped 2,500 bushels of oats from that city for Trinidad. This is said to be the second shipment in three weeks, the first shipment having been sold to good advantage, and giving satisfaction. Mr. Reid is reported to have orders for 5,000 bushels more for the same market, to be packed in 1,000 bags of five bushels each.

Late advices, says the New York *Journal and Bulletin of Commerce*, state that there will be a good crop of Grenoble walnuts, and that it will be harvested somewhat earlier than usual. The first shipment from Havre will probably be made about the end of this month, arriving here about a week later. The first shipments of new crop Naples walnuts for New York are expected to be made some time this week from Sorrento.

There has been issued as a British blue book a report of the Royal Commission on the West India sugar industry. This report finds that industry to be in danger of extinction owing to the bounty system and protective tariffs, and suggests relief by encouragement of the trade in fruit with New York. It is proposed that a grant of money from the Imperial treasury be made to encourage this trade, and, besides, the report recommends a loan of £120,000 for Barbadoes for the establishment of central factories, and it also suggests grants of £200,000 to build roads, etc., etc.

Here is a concrete illustration of the worth of cold storage for fruit to Britain. A lot of 267 barrels of apples was carried lately in cold storage to Glasgow. They are reported as having averaged 18 shillings per barrel. At the same a lot of 325 barrels of apples was shipped in the old way to Liverpool, without cold storage, and realized only 8 shillings per barrel. Both lots of apples were from the same stock of the 325 barrels of apples shipped in the old way. One hundred and twenty-four barrels were reported as wet and slightly wet, and 81 barrels were reported as slack. Thus out of the total shipment of 325 barrels without cold storage, 205 arrived in a damaged condition.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, Oct. 7th, 1897, compared with those of the previous week:

CLEARINGS.	Oct. 7.	Sept. 30.
Montreal	$14,601,837	$12,461,980
Toronto	9,052,107	7,347,757
Halifax	1,442,966	1,129,803
Winnipeg	3,116,663	2,649,307
Hamilton	818,060	566,070
St. John	627,216	515,097
	$29,658,849	$24,670,014

Aggregate balances this week, $5,104,174; last week, $3,785,990.

—A suit to determine the extent to which a stockbroker may advertise his business is brought into the Court of Common Pleas by Dick Brothers & Co., of Philadelphia. The bill asks for a legal interpretation of one of the Stock Exchange by-laws, which says that no member shall have the right to advertise in anyway that he will buy or sell loans, bonds or stocks, as a class, whether listed or unlisted' which are upon the Stock Exchange, without the authority of the governing committee. The penalty for violation is $100 for a first offence and expulsion from the Exchange for a second. The charge against Dick Brothers & Co. is that they have issued a circular to the public. This the firm contends is not a violation of the by-law, as it is not an invitation to either buy or sell stock, but simply information, in knowing which their clients are interested. Now they ask the court to issue an injunction restraining the Stock Exchange from using the circular letter as evidence of a violation of its rules. A temporary injunction has been granted upon security of $100.

—The assessable property in Hamilton is valued this year at $26,971,410, and with the exemptions added the total value is $31,050,630. The real estate assessment of the city shows an increase of $315,268 over last year, which is a very slight difference, but the increase in assessable income was $894,862. For example, assessment of the Canada Life was increased from $34,000 to $692,000, the Hamilton Provident and the Landed Banking and Loan Co., also had their assessments materially increased. The population is now 50,038, an increase of less than a thousand on the year.

—The business men of Carberry, Manitoba, have organized a body to be known as the Carberry Board of Trade. At the organization meeting held on the 24th Sept., Mr. J. B. Henderson took the chair. Sixteen members were enrolled and the election of officers resulted as follows: J. B. Henderson, president; G. B. Murphy, vice-president. J. M. Neilson was elected as secretary, J. D. Hunt having resigned owing to press of other business. The following council was elected: Messrs. Maloan, Harrison, W. M. Boyd, White, Stewart, Smale, Manville and May.

—While the speaking at the Laurier banquet was good, from the chairman onward, the grasp and fire of Dr. Parkin's address was the theme of every tongue. Mr. Gurney, who presided, dwelt earnestly upon Canada's desire for more people, and upon the need of an immigration policy framed upon business lines. When he said, further, that the shackles of debt should be removed from every honest bondman, applause indicated the sympathy of many.

BIG SHIPS OF NICKEL STEEL.

Prof. J. H. Biles, of Glasgow University, says that if nickel steel were now the same price per ton as mild steel, there seems to be no reason why it should not be at once adopted for large vessels, either war or mercantile. But it is not produced at present for much less than three times the price of mild steel. In a paper dealing with "Improved Materials of Construction and their Influence on Design," read before the British Institution of Civil Engineers, Prof. Biles writes very interestingly of questions of construction involved in the use of nickel steel as a material for ships. He concludes with a summary of the effect which the adoption of nickel steel would have upon the design of a 10,000-ton ship.

"It may be assumed," says Prof. Biles, "that nickel steel, 50 per cent. stronger than mild steel, can be produced with certainty. The relative weight of parts subjected to longitudinal stress may be reduced 33 1-3 per cent. If we assume that to resist compressive strains we have to reduce frame spacing, and can only take advantage of the increased strength of the material to the extent of one-half, we shall only gain 16 2-3 per cent. in transverse framing material. The total gain in a 10,000-ton ship will be 1,000 tons on a weight of 6,000 tons—this is 16 2-3 per cent. It was found in passing from iron to mild steel that from 1½ to 3½ per cent. was added by increased weight of butt straps, laps, etc., and though a smaller percentage would probably be added in this case, some allowance should be made. It seems as if from 14 per cent. to 15 per cent. of the weight of steel could be saved. This reduction in the weight of hull can be used to increase weight of machinery and coal. The extra speed resulting therefrom in a 20-knot ship will be 1 1-4 knots with an extra total coal consumption of 13 per cent. To produce a mild steel vessel carrying the same dead weight of cargo and having 21 1-4 knots speed, the dimensions would have to be increased by 10 per cent., the horse-power by 40 per cent., the first cost by 20 per cent., say $350,000 (supposing passenger accommodation to remain the same). Supposing the cost of workmanship is the same in a nickel steel vessel of the same dimensions as in one of mild steel (it will probably be less), we should have as the only difference in the first cost of the two vessels, that between 6,000 tons of mild steel and 5,000 tons of nickel steel. The former might cost $200,000, but the latter could hardly cost $200,000 plus $350,000, which would be $550,000; and anything below this would be in favor of the nickel steel ship, both in economy of first cost and in economy of upkeep. The coal bill in the mild steel ship would be 19½ per cent. more than in the nickel steel ship. The 5,000 tons of nickel steel could probably be bought at present for $375,000, leaving a balance of $175,000 of saving. These figures are given to show the great value which increase of strength of material has upon the design of a ship and upon its first cost. It will be of interest to know what chance there is of this material being produced much more cheaply. No reference has been made to reductions in weight of machinery due to the adoption of nickel steel and their effect upon design."

NORTHERN ONTARIO MINES.

The discoveries in the Michipicoten district, mentioned in our last month's report, whilst they prove to be not very extensive, show that the gold region extends from the Manitoba boundaries to the extreme eastern end of Lake Superior. The Government under the power of the new Mining Act, which provides for the setting apart by an order-in-Council of a tract of country within the limits of which district owners of a miner's right may proceed to stake out areas of 22½ acres, to be known as miner's claims, have established this district as a "mining division." This is a step in the right direction, and does away with the cumbersome survey procedure and the freehold Crown grant which has enabled capitalists to blanket so much of the Algoma country. The division embraces about 5,000 square miles. Following up this action the Government dispatched a survey party under Prof. B. A. B. Willmot to thoroughly examine the district. The vein formation as far as prospected is almost entirely lenticular. The rich finds advertised should be accepted with some hesitation, as the large majority of the prospectors are innocent of mining experience. Our private report of the district is unsatisfactory, the deposits being very low grade. It is, however, not likely that enough will be known of the district this year for a full opinion to be formed. The reported placer finds in the district prove to be of very limited extent, of no great value, and very widely separated.

Near Tache, about 140 miles west of Port Arthur, some good discoveries are reported, reefs running from 20 to 50 ft. in width carrying much visible gold, and alluvial deposits extending for some miles. In the Shabandowan district some rich and large reefs are reported as discovered; whilst in the vicinity of Round Lake development work has exposed a remarkably rich copper deposit, the extent and width of which is going to be tested with the diamond drills.

Progress with the construction of the Rainy River Railway is delayed, owing to modifications in the route, necessitated by the difficulty of grading along the proposed survey.

Some valuable discoveries of black sand containing platinum, osmium and iridium, assaying $45 per pound, are reported privately.

Prices for leading companies closed for the month:

Saw Bill, $2.25 to $2.50; Foley, $1.75 to $2; Hawk Bay, 35 to 50c; Princess, 25 to 30c; Empress, 5 to 10c; Hammond Reef, 25 to 35c.

Locations on prospectors' hands are, in the case of out-of-the-way positions, offering freely, but those well chosen along the Contact are changing hands at higher figures. Locations with satisfactory opening developments have been bonded at good figures, and are more in demand than at any time during the year, whilst actual sales are recorded as high as $25,000. —*Aemilius Jarvis' Circular, October.*

CANADA IN ENGLAND.

Among the remarks or suggestions as to things Canadian which have been made by visitors to the Dominion in connection with the British Association, one which is eminently sensible was made by Mr. J. Scott Keltie, editor of the Statesman's Year Book, viz., that pains should be taken to place the actual condition of Canada before the peoples of the Old Land.

Mr. Keltie says that the people in the Old World do not realize the condition of things here. He thought that much more might be done in the direction of making the actual conditions in Canada known more widely and generally than they now are. Especially would it be beneficial if the many advantages which Canada has to offer for farming upon a small scale were made known. "There are," he said, "many respectable and intelligent farmers on the other side of the water, who cannot, in recent years get along, owing to low prices and other reasons, but who can command a little capital; and I understand but very little is required to carry them over for a year. If these men were fairly informed as to the condition of things here, you would, I believe, get a good many more desirable immigrants. Many more than you are getting now."

I understand quite well that you do not want the riffraff of London for settlers. You want physically strong, able-bodied men with good intelligence, a willingness to work, and ambition to make comfortable homes for themselves and families, and with the necessary capital to tide themselves over the first year of settlement. I think there are plenty of this type of men in England, Scotland and Ireland, who, if it were brought home to them thoroughly, would be only too glad to come over here and try it. And not only there, but in other parts of Europe, are men of this desirable type to be found. In Switzerland, for example, there are a great many farmers who have had a most terrible struggle for life, and who live under climatic conditions which specially qualify them for the Canadian winter, and in other respects they are desirable people to have."

RICHER FARMERS.

A common error has been made in supposing that there never would be any radically new discoveries in farming methods. Farmers seem to have settled down to a permanent continuance of old methods, presuming all is known that ever can be known. But this has recently been shown to be a mistake, as is illustrated in the Campbell method of growing crops, allusion to which has been made in these columns. From an Iowa exchange we learn that a series of tests has been made under the old and new system. And what a difference! Wheat grown under the old system had heads about two inches long, with straw no larger than a knitting needle, and an average height of about fifteen inches, and is nearly ready to cut, while the other has heads that will average four inches long, a large kernel that is not nearly filled yet, with a large, strong stalk, and is of a dark-green color and will not be ripe for two or three weeks yet. Under the old way one and one-half bushels of seed were sown to the acre, the result being that when it came up it did not stool at all, but sent up one spindly stalk from each grain of seed, while the other was drilled in rows twenty inches apart, one peck of seed being sown to the acre, and it has stooled out sufficiently to nearly cover the intervening space between the rows, and from seventeen to twenty stalks spring up from one grain of seed. Mr. Campbell estimates that the yield under his method will be 250 per cent. greater than the yield under the old. Fancy the difference this will make in the ability of a farmer to pay his mortgage and other debts?—*American Investments.*

—One of the best crops that has been reported this year from Manitoba, was that of Mr. A. J. Cotton, of Treherne, who threshed from 475 acres over 12,500 bushels of No. 1 hard wheat. The yield on the whole field averaged 26 bushels to the acre. In addition to this Mr. Cotton succeeded in marketing quite a large bulk of the grain early in the season, and will realize from it about $9,500. He will clear by the crop $6,000 or $7,000 for his year's work.

Meetings.

LONDON AND ONTARIO INVESTMENT COMPANY, LIMITED.

The twentieth annual general meeting of the shareholders in this company was held on the 16th day of September, 1897, at the office of the company, No. 17 Melinda street, Toronto, the president, Sir Frank Smith, in the chair.

The following shareholders were present: Messrs. John Catto, E. M. Chadwick, W. B. Hamilton, James Mason, John F. Taylor, W. H. Beatty, Henry Gooderham, A. B. Lee, Alex. Nairn, Fred. Wyld, C. B. Petry, A. J. Wilkes, R. Thompson, J. M. Hirschfielder, John Paton, and Rev. P. D. Will.

After appointing the manager, Mr. A. M. Cosby, as secretary, the following report, accounts, and auditors' certificate were read:

REPORT.

The directors beg to submit to the shareholders of the company the twentieth annual report, with the usual statements of account, for the fiscal year which closed on the 30th June, 1897:

The net profits of the year amount to $38,557.66, which have been appropriated as follows:

Two half-yearly dividends paid at the rate of 6 per cent. per annum..	$33,000 00
Added to property suspense account	5,557 66
Total	$38,557 66

The bountiful harvest throughout the Dominion with good prices for farm products, and the development and enlargement of the dairy industry, point to the probability of the country entering a new era of prosperity which cannot fail to stimulate and benefit business and financial interests of all kinds.

The thanks of the shareholders are again due to the agents of the company in Britain for the valuable assistance they have continued to give in connection with the supply of debenture capital for investment.

The inspection of properties under mortgage and the audit of the books have been continued as in other years. The auditors' certificate is presented herewith in the usual form.

All of which is respectfully submitted.

FRANK SMITH.
President.

Profit and Loss Account for the Year Ending June 30th, 1897.

Expenditures.

Expenses of management, directors' and audit fees		$ 12,165 27
Office expenses, rent, postage, advertising, etc		3,849 85

		$ 2,936,094 38

Auditors' Certificate.

We beg to report the completion of the audit of the books, accounts and vouchers of the London and Ontario Investment Company, Limited, for the year ending June 30th, 1897.

The mortgages, debentures and other securities have been inspected in detail, and the amounts correspond with the totals as set forth in the ledger.

The accompanying statements of assets and liabilities, receipts and expenditures, are hereby certified as correct. We also verify the balance of cash in the banks.

Yours respectfully,
W. R. HARRIS,
THOS. HODGETTS,
Auditors.

The report and accounts were adopted by the meeting, on resolution to that effect, moved and seconded by the president, Sir Frank Smith, and the vice-president, Mr. W. H. Beatty, respectively.

The following resolutions were also adopted by the meeting:

Moved by Mr. A. J. Wilkes, seconded by Mr. John Catto—That the thanks of the shareholders are hereby tendered to the president, vice-president and directors for their personal attention to the business of the company during the past year, and that in recognition thereof the sum of $2,400 be awarded them.

Moved by Mr. Fred. Wyld, seconded by Mr. H. Gooderham—That the sum of $400 be appropriated for the services rendered during the past year by the auditors, and that Messrs. W. R. Harris and Thos. Hodgetts be re-appointed for the current year; and in case of the death or resignation of either or both of them, the board be and are hereby empowered to appoint others in their places.

Moved by Mr. W. B. Hamilton, seconded by Robt. Thompson—That the poll be now opened for the election of directors, and that the same shall be closed whenever five minutes shall have elapsed without a vote being tendered, and that Messrs. E. M. Chadwick and James Mason be the scrutineers, and that they report the result of the election to the meeting, and be paid the sum of five dollars each for their services.

A ballot was then taken, after which the scrutineers reported that the following gentlemen were unanimously elected directors of the company for the ensuing year: Hon. Sir Frank Smith, Messrs. W. H. Beatty, Wm. Ramsay, W. B. Hamilton, A. B. Lee, Alex. Nairn, Fred. Wyld, Henry Gooderham, and John F. Taylor.

The meeting then adjourned, and a meeting of the new board was then held, at which the Hon. Sir Frank Smith was elected president, and W. H. Beatty, Esq., vice-president for the ensuing year.

IMPERIAL LIFE ASSURANCE COMPANY OF CANADA.

The Imperial Life Assurance Company of Canada, with headquarters located in the city of Toronto, has begun business under favorable circumstances. The capital of $1,000,000 was subscribed for at a premium of twenty-five per cent. without a dollar of advertising or other cost to the company. The promoters say the book was simply kept in the office and the subscriptions exceeded the required amount by $200,000. Securities valued at a quarter of a million dollars were purchased by the company, and deposited with the insurance department of the Dominion Government at Ottawa. The deposit is five times larger than the law requires, and makes the Imperial's deposit the largest of any Canadian company. The company announces that the policies to be issued will embrace the latest and most approved forms of life insurance contracts pure and simple, the most attractive forms of endowments, etc. The company is directly under the management of F. G. Cox, managing director. The actuarial department is in charge of Thomas Bradshaw, F.I.A., who also fills the office of secretary. Mr. Bradshaw is a thoroughly experienced actuary, whose reputation has extended beyond the borders of his own country. The agency deartment is managed by Robert Junkin, formerly with the Manufacturers' Life for three years, and with the Sun Life for twelve years. With Sir Oliver Mowat, Minister of Justice, as president of the company, Joseph W. Flavelle as vice-president, and a directorate of eminent public officials and bankers, including the Hon. Geo. A. Cox, president of the Canadian Bank of Commerce, and for nearly forty years connected with the Canada Life, the Imperial Life is well equipped to justify the favorable predictions made for its future. As an indication of the energetic character of the management of the company it has written already in the first fortnight of its existence several hundred thousand dollars of business.—*N.Y. Spectator, 30th Sept.*

—Charity—"But, my dear," gently remonstrated her husband, "I thought I gave you $5 to buy a sofa cushion for your fancy table at the fair yesterday." "Why, but John, dear, this $5 is to buy it back."
—*Judge.*

Commercial.

TORONTO MARKETS.

Toronto, Oct. 7th, 1897.

Dairy Products.—Trade is steady. There is only a limited supply of dairy butter of the best quality in the market, and for this the demand is greater than the supply. Prices, as a result are firmer. Merchants are compelled to fall back upon stored butter of summer make. Of butter suitable for bakers' purposes there are abundant supplies, and dealers find it difficult to sell all the receipts coming forward at a profit. We quote: Choice dairy, 14 to 15½c; medium quality, 10 to 13½c; and bakers', 9 to 11c per lb. The creamery butter trade is steady, and supply and demand appear to be well balanced. The best enquiry is for prints, which are quoted at 19 to 20c, with special brands selling at 21c. Dairy tubs are worth 18 to 19c per lb. The local cheese trade is quiet, with 9½ to 10c per lb. quoted. The prices of eggs, according to dealers are much too high for the season. As a result consumption has been curtailed, and export trade can be done only at a loss. Choice eggs are quoted at 15 to 15½c per dozen, and held stock at 11 to 12½c per dozen.

Dry Goods.—The sorting season is now fully opened, and merchants report a fairly active trade. Values are firm. The reports in the press of a smart advance in cottons, published this week, appear to be without foundation. The situation in primary market certainly does not warrant an advance in prices. The movement at present is subject to the weather conditions, and cold weather would do much to improve business in dry goods circles.

Flour and Feed.—Trade remains unchanged. Values are about the same as reported a week ago. Manitoba patents are quoted $5.10; strong bakers', $4.80, and patents (winter wheat), $4.30. Bran continues unchanged.

Grain.—The wheat market is firmer, quotations having advanced 1 to 2c per bushel during the week. Wheat is coming out freely at different points in Ontario. The quality, which has not been of the best, shows some little improvement. Barley is quiet, and without change. There is a fair movement in rye at a decline of 1c per bushel as compared with last week. Buckwheat is steady. There is no movement in corn. Peas are coming out slowly, but are in active request. The stocks in store at Port Arthur on Sept. 25th were 781,583 bushels, and there were received 772,403 bushels, and shipped 486,298 bushels, leaving in store on October 2nd, 1,067,689 bushels.

Hardware and Metals.—Trade is improving with the advancing season. Orders coming in range over a general assortment of supplies. The feeling in the country is more hopeful, and the prospects point to an active season's trade this autumn. Prices are firm and in a number of cases are advancing. American manufacturers of a number of lines have withdrawn quotations, and dealers look for higher prices. Metals are active. Jobbers find it difficult to supply the demand for galvanized iron. Block iron and sheet steel are moving freely, while for tin-plate and ingot tin there is good enquiry. In heavy hardware business has improved during the past few weeks, and stocks purchased early in the spring are now running low.

Hides and Skins.—The situation remains practically without change. Merchants continue to pay 8½c for No. 1, Toronto inspected green hides, and are quoting cured at 8 3-4c per lb. Sheepskins are steady at 85c. Tallow is quiet and dull, with prices as previously quoted.

Hops.—Buyers and sellers continue to be apart in their ideas of the value of hops, and as a result little or no business is being done. Brewers want to secure Canadian hops for 10 to 12c per lb., while growers are asking from 15 to 18c per lb. The samples coming forward show the best quality for a number of years past. Middlemen are in a quandary as to the situation, but say that no special movement can be looked for until Nov. 1st. The British Columbia crop of hops this year is very light, as the result of heavy rains, the aggregate yield, it is said, running fully 25 per cent. less than that of a year ago. Late English mail advices indicate a short crop. A letter dated September 18th, says of the Kent and Sussex yards: "Three weeks' picking has served to secure the bulk of the crop in these counties. Some results of the ingathering in a few typical cases, as compared with those of last season: One planter who last year grew 192 pockets has obtained only 80; another who in 1896 had 445 pockets markets only 241 this year. Another grower, with this year an additional 16 acres in bearing, finds his yield 100 pockets short of last year's crop. The weather of the past week has been a decided improvement upon that which prevailed during the earlier part of the picking, less rainfall having been experienced. Mould and the return of the aphides have, however, caused some anxiety, and are elements which induce growers to push forward the picking with all possible speed. The quality of the great bulk of the samples is excellent." The Waterville (N.Y.) *Times*, Sept. 28, reports as follows: "As the growers continue to press their hops it is found that they are weighing less to the box than formerly, and there will be a shortage on this account in the total weight not before counted on. Some have found the shortage to be about two pounds to the box on an average. There have been a number of sales in this vicinity at 15c, which has been freely offered, many of the growers declining to sell at present."

Provisions.—An active trade is passing. The lumbermen are evidently going into the woods with full vigor this year if orders for that industry given to merchants in pork products can be taken as a criterion. The demand for heavy meats is active and prices remain firm.

Wool.—Trade is inactive. The movement in fleece wool is very limited. For pulled wools the Canadian mills are making more active enquiries. A letter from Philadelphia, Oct. 1st, says: "Markets continued strong and active, until prices were advanced to their present basis, which many buyers regard as higher than will show further inducement to continue buying ahead of their present wants. Consequently, during the past week, there has been less enquiry for wool, but a few large transactions have brought the aggregate of sales to large figures."

MONTREAL MARKETS.

Montreal, Oct. 6th, 1897.

Ashes.—Receipts have again fallen off, hardly ten barrels having come in since last writing, it is reported. Prices, which fell off somewhat from the big advance of a fortnight ago, are reported fairly steady at from $3 60 to 3.75, regular dealers offering the inside figures, though we hear of a few odd barrels being sold at the outside figures; very few seconds are coming in, and a nominal figure is $3.20 to 3.30; pearls $4.40 to 4.50 per cental.

Boots and Shoes.—The local factories are fairly employed as a rule, but sorting fall orders for footwear are small, the generally fine weather prevailing everywhere preventing much breaking into retail stocks as yet. Spring samples are being prepared, and in some cases are already in the hands of travelers. Quebec makers are reported well employed. Those manufacturers in the latter city who cater to the jobbing trade, and who have suffered more or less from the numerous recent failures in the West, have decided, and very wisely, to insist on shorter credit terms. There will be no further dating ahead, nor discounts beyond ninety days; for thirty days 6 per cent. will be allowed, sixty days 5 per cent., and ninety days, 4 per cent.

Cements and Firebricks.—The week has not been nearly as brisk a one as last week, but a moderate aggregate of small orders is reported. Prices are steady at $1.85 to 1 95 for Belgian, and $2 to 2.10 for British. The receipts this week are small, only 185 barrels of English, but some large shipments are due next week. Firebricks are steady at $16 to 21.00; receipts 16,000.

Dairy Products.—Cheese values have eased off from ⅛ to ¼c. per pound; but the movement is more active as a consequence. The exports last week footed up to 93,900 packages, as against 64,700 boxes last year for corresponding week, and the total exports for the season to date are nearly 330,000 boxes ahead of the same date in 1896. We quote:—Fine Western, 9¼ to 9⅜c.; Townships, 9⅛ to 9¼c.; Quebec, 9 to 9⅛c. Of butter, the shipments last week amounted to 17,191 packages. The present figure for finest creamery is 19 to 19¼c.; good dairy is in demand at 13 to 14c. for Western; Townships, 16 to 18c. The local demand for eggs is good, at 13 to 14c. for fresh laid, and for candled, 11 to 12c. A recent shipment is reported to the West Indies at a satisfactory price.

Dry Goods.—Enquiry in a variety of quarters would indicate that payments on the 4th inst. show a good average of paper provided for, and we do not hear of a dry goods failure resulting from any default. This applies to country payments more particularly; city payments are hardly so good. A fair business is being done by all houses, but more broken fall-like weather is needed to induce more activity in sorting business.

Groceries.—The trade generally report a very good demand, with gratifying improvement in country remittances Teas and sugars are very steady at last quoted prices, but a tendency to advance is strongly evident in a good many lines. The "Avlona," with direct supplies of currants and Valencia raisins, is not yet reported in the gulf, and she will probably be a few days later in arriving than first calculated. The market for California raisins is described "as stiff as starch," and the published advice from Eastern operators to hold off buying is said to come from those who have sold short, some of whom are said to be offering as high as $200 a car to cancel orders. Some growers are said to be putting their raisins into store. Rains have delayed shipments; so far only one car of three-crown have been received here, costing about 6¾c. laid down, and it will probably be a fortnight before further supplies are received. Seeded Californias will again be put on the market this season in pound cartons, to cost 10 to 10½c. laid down. A sharp advance is predicted as likely in California prunes. Canned fruits and vegetables are very firm all around. Some packers are now asking 90c. for tomatoes, and 85c. for peas; for new gallon apples $1.85 is quoted in quantity from factory, very much higher figures than last year. Lobsters also are very scarce, and $10 to 10.50 would be asked in a jobbing way for talls; we hear of a packer asking $8.50 at the factory for wholesale lots. Salmon are still easy on the coast, at $3.35.

Hides and Tallow. — The only notable change in these lines is the advance in lambskins, which are now up to 60c. Beef hides are steady at 8c. for No. 1 to dealers, and 9c. to tanners. with receipts well absorbed; calfskins, 8 and 6c. Butchers only realize 1 to 1½c. on their rough tallow, and sales of rendered are slow at 3 to 3½c.

Hops.—Both consumers and growers seem holding back, and there is but a moderate business passing. Choice Canadians are quoted at about 12 to 14c. per lb. Some very fine British Columbia hops have just been received here, for which nothing under 20c. would be accepted. Yearlings and old olds are not wanted, and prices are wholly nominal.

Leather.—The week has not developed any specially large sales; but there is a regular steady business being done in moderate lots at firm prices. Stocks of all lines of black leather are reported very light on spot, many tanners who formerly consigned to this market now shipping to to England, whence they are apparently realizing satisfactory returns Dongolas and other fancy leathers keep moving upwards We quote:—Spanish sole B A. No. 1, 24 to 25c.; do. No. 2, 22 to 23c; No 1 ordinary Spanish, 22 to 23c.; No. 2, 19 to 20c; No. 1 slaughter, 25 to 27c.; No. 2 do., 21 to 23c.; common, 20 to 21c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 22 to 25c; Quebec do., 17 to 20c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—A stiffness has developed in domestic bar iron, and $1.35 is said to be the very lowest figure for car lots, while some of the rolling mills quote $1.40; further advance is not unanticipated. In pig iron, too, the tendency seems towards firmness, and nothing could be done now in Summerlee at $17.50, as reported last week; a sale of Hamilton No. 1, of 40 tons, distributed delivery, is reported at $16.50. Further advance is reported in large sizes of iron pipe. There are now ample supplies of Canada plates, and the edge being off the demand, values are easier; probably a round lot could be done now at $2 00 to $2.05. We quote:—Summerlee pig iron, $18.00 to $19.00; Carron, No. 1, $17.00; No. 3, $16.25; Ayrsome, No. 1, $16.50; No. 3, $16.00; Shotts, $17.25 to 17.50; Carnbroe, $16.50, to $17.00, ex-store; Siemens pig No. 1, none; No. 2 Siemens, $15.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $14 to 15.00; common do., $12 to 13.00; bar iron, Canadian, $1.35 to 1.45; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2 10 to $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $5.75 to $5.90; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do., I.X., $3.90 to 4.00; P. D. Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 2.95 for standard, $2.75 to $2.80 for 100 lbs.; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2.45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3.75 to 3.90; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16¾ to 17c; ingot copper, 12 to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.75; antimony, 9 to 10c.

Oils, Paints and Glass.—Dealers in these lines continue to report a good fair business doing. Turpentine and linseed oil remain firm at recent advance, also castor oil, for which some dealers decline quoting 10½c., even for fair lots, as it is stated it cannot be bought in quantity from first hands below 9¾c. Shellacs are advancing, and firmer prices are looked for in varnishes. The European markets for glass are still reported strong. We quote :—Turpentine, one to four barrels, 47c.; five to nine barrels., 45c., net thirty days. Linseed oil, raw, one to four barrels., 43c.; five to nine barrels. 42c.; boiled, one to four barrels, 46c. ; five to nine brls., 45c., net 30 days; olive oil, machinery, 90c. ; Nfld. cod, 40 to 42c. per gal. ; Gaspe oil, 36 to 38c. per gal. ; steam refined seal, 48c. per gallon in small lots. Castor oil, 10 to 10½c. as to quantity. Leads (chemically pure and first-class brands only), $5.37½ ; No. 1, $5.00 ; No. 2, $4.67½ ; No. 3, $4 25 ; No. 4, $3.87½ ; dry white lead, 4¾ to 5c. ; genuine red do., 4¼c. ; No. 1 red lead, 4c. ; putty, 1.65 to $1.70 in bulk, $1.75 to 1 80 in bladders, $2 to 2.10 in tins ; London washed whiting, 40 to 45c. ; Paris white, 85 to 90c. ; Venetian red, $1.50 to 1.75 ; yellow ochre, $1.25 to 1.50 ; spruce ochre, $1.75 to 2.00 ; window glass, $1.30 per 50 feet for first break ; $1 40 for second break ; third break, $2.90.

THE NYLIC.
The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.
Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.
R HOPE ATKINSON, Agency Director, MONTREAL.

TEN DOLLARS A MINUTE!
This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the
METROPOLITAN
Life Insurance Co. of New York
Assets, ... $25,592,003 78
The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.
Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE
5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.
CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.
Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.
Sixty Thousand Families will receive the proceeds of its Policies this year
Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for immediate payment of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

"NATURAL MONOPOLIES."

The Convention of Mayors and Councilmen, which has just been held at Columbus, Ohio, has brought out very clearly the drift of opinion toward the control by municipalities of what are called "Natural Monopolies." In respect to the water supply the necessity of such control is universally admitted, but when it comes to be a question of furnishing gas and electric light, of running street car lines and operating ferries by direct municipal agency, there is opened up a large field for debate. The formation of the League of American Municipalities, which has been the first visible result of the convention, is calculated to give an impulse to the extension of the sphere of municipal activity. The tendency of the movement, of which this is the first stage of development, is unquestionably to support the idea that a city may, in its corporate capacity, do all it can in the performance of any service which can be properly called public. The keynote of the movement is obviously the restriction of the area of private enterprise in the operation of public franchises. This is sharply in opposition to the idea that municipal government should be confined within the narrowest limits compatible with the public convenience or welfare. The position thus defined is one of serious importance, because the prevailing sentiment of the newly formed League is evidence of a sentiment already well established and generally diffused among its members. The League will do its part in translating this sentiment into action, just in proportion as united effort is a more powerful force than isolated or independent initiative.

In matters of State and national concern, there is a widely entertained conviction that the country is too much governed. There are too many laws, too much money spent in departments of public activity that could be better conducted by private agency, and too much interference with the natural play of forces which give vitality to free government. If a totally different attitude is to be taken in regard to the government of cities, some very good reasons must be given to sustain it. Certainly some better reasons must be forthcoming than that the new theory of municipal action has secured a great deal of support both at home and abroad, and that it is no longer a question of confining a city government to what it must do, but of discovering how many things it can do as well as, or better than, a private corporation. It is not so much the immediate results of this new theory that are to be considered, as whither it is likely to lead us, and how it may affect the future of our political system. Were the argument in favor of cheaper light or transportation being supplied by the city than through the agency of a private corporation much stronger than it is, there would remain the very grave consideration, what is to be the effect on the conduct of local and general politics and on the forces that are controlled by politicians of an indefinite multiplication of city employees? There may be a danger, when the number of men drawing pay from the city treasury becomes large enough to make or unmake political parties, that our servants should become our masters. There certainly would be such a danger unless the conduct of city affairs can be absolutely divorced from partizanship, and unless the holding of a place under a city government becomes as free from political influence or pressure as the holding of a place under a private corporation. That consummation may be at hand here and elsewhere, or it may be very distant; in any case it is something which will cost a struggle to obtain, and probably no less arduous struggle to preserve intact. It is at least an open question whether the struggle will not rather be hindered than helped by a further enlargement of the sphere of municipal action.

In his speech at Columbus the other day, Mayor Quincy, of Boston, made the following observation: "The question whether city life has not already proved too powerful a magnet in attracting people from the country to the town—whether large numbers of those who to-day earn a scanty, sometimes a precarious, livelihood in cities would not be materially better off in the country—whether municipalities will not yet be forced in self defence, to open up some regular channels through which those who become dependent upon the public may be returned, so to speak, to the soil, to earn their own support from its cultivation—raise problems for the future which can only be suggested at the present time." Yet, with the apparent approval of its chief magistrate, Boston has been making steady encroachments of late on what may be called the field of private enterprise. It has established a municipal printing office, it has a department of electricity designed to provide isolated plants for the lighting of public buildings, and it keeps 3,000 laborers steadily employed on street and other improvements which are elsewhere given out by contract. To light its own public buildings is obviously a step on the part of Boston toward lighting ts own streets and public places, and so installing plants large enough to supply the wants of stores and private residences. But a city can hardly treat the electric lighting business as a legitimate sphere for muncipal operation and disregard the much stronger argument in favor of running the street cars by means of a city department. If the one is a "Natural Monopoly," so is the other; if corporations have too much power to tax the consumer in the one case, they are still more advantageously placed for making profit out of a public service in the other.—*N. Y. Journal of Commerce and Commercial Bulletin.*

CURIOSITIES OF TAXATION.

From the annual parliamentary return for the United Kingdom of Great Britain and Ireland, of taxes and imposts for the year ending March 31, last, it is gathered that the number of dogs licensed in Great Britain was 1,370,482, the number of licensed male servants was 199,744, the number of hackney carriages, 116,442, and of private carriages 431,931. Over 200,000 persons paid ten shillings for a license to carry a gun, and 56,584 persons paid one or two guineas each for armorial bearings. There were nearly 2,000,000 packs of playing cards made for sale or use in the United Kingdom, which are all dutiable, and bills of exchange numbered 7,576,491, these, too, bearing a tax.

COMMERCIAL BLACK SHEEP.

The board of administration of the National Association of Credit Men of the United States has taken a very advanced position in reference to dealing with the great commercial curse of dishonest or fraudulent failures. It is proposed to attack this evil, root and branch, upon a plan that is national and far-reaching in its scope. The organization is in excellent shape to enter upon this important work. Its organized membership is now 1,746, a gain since June of 333, and its individual membership is 243, making a total enrollment of 1,989. The resolutions adopted by the board of administration at its meeting in New York Sept. 20, are as follows:

Whereas: Fraudulent features constitute a serious menace to the mercantile community; and

Whereas: Such failures are as dishonest and reprehensible as any form of robbery, and the safety of the business public demands that all persons involved therein be brought to justice; therefore, be it

Resolved: By the board of administration of the National Association of Credit Men that the plan of dealing with suspicious failures presented be, and the same is hereby approved, and the board recommends that the proposition contained therein, to select legal correspondents throughout the United States, to act in conjunction with some well-known detective agency in investigating such failures be especially emphasized in carrying out such plan; and be it further

Resolved: That the officers of the association, together with the Committee on Investigation, be authorized to make such changes and modifications in the plan presented as they may deem expedient.

There is a flavor of sincerity and business about these resolutions that augurs well for the success of the undertaking and badly for the commercial black sheep who thrive by means of fraudulent failures.—*Shipping List.*

MONTREAL BOARD OF TRADE.

It would seem that the Council of the Montreal Board of Trade is losing patience with the replies of the Department of Public Works at Ottawa about the ship channel between that city and Quebec. At the last weekly meeting the following resolution was passed, and ordered to be communicated to Hon. Mr. Tarte:

"That in view of recent disasters between Montreal and Quebec; that in view of the fact that some of the Quebec-Montreal pilots have complained that the depth of water at certain points in the ship channel has been less than that indicated by the Government gauge at Montreal; that in view of the fact that this Council, at the request of the Marine Underwriters' Association, did, under date of February 22nd, 1896, call the attention of the Minister of Public Works to the possibility of stones and debris being deposited in the channel during spring freshets, thus reducing the depth of water supposed to be available; and suggesting as a proper precaution that an official sounding of the channel be made at least three times a year, and further, having reference to the reply of the Hon. Minister of Public Works, stating 'that these matters would be duly attended to, the Council of the Board of Trade now asks to be officially informed what steps have been taken in conformity with this promise contained in the Minister's letter of 27th February, 1896."

Mr. John McKergow presided at the meeting. The others present were Messrs. James Crathern, Charles F. Smith, Henry Miles, E. L. Bond, Charles McLean, James W. Pyke, Chas. Chaput, A. W. Stevenson, F. W. Evans, Harry Stikeman, Robt. Mackay, David G. Thomson, W. B. Matthewson and David Watson.

THE TERM HORSE-POWER MISLEADING.

It is important to observe that, as pointed out the other day in *Power*, the term "horsepower" is misleading. That journal says: "The term horse-power when applied to a boiler, is always misleading, besides being a misnomer to start with. A hundred horse-power boiler will supply steam for a modern engine to develop 200 horse-power. The term should be avoided when speaking of boilers whenever it can be gracefully done, and we notice with gratification that an English writer says of water tube boilers that 'the approximate cost erected is £96 per 1,000 pounds evaporation.' That is to say, you can buy and erect for £96 enough boiler to evaporate 1,000 lbs. of steam per hour. You can use the steam of a pump at an expanse of 200 lbs. per hour per horse-power, making the boiler supply five horse-power: or in a compound engine at an expanse of 13 or 14 lbs., making the boiler supply 70 horse-power: or you can use it for boiling glue and generating no horse-power at all."

—France has bought the late M. W. Waddington's collection of Greek coins for 421,000 francs. It contains 73 gold, 1,300 silver, and 5,635 bronze pieces. Among them are coins of 398 towns of Asia Minor.

—The advertisements which appear in public journals take rank among the most significant indications of the state of society of that time and place.—Dickens.

DECISIONS IN COMMERCIAL LAW.

ROBERTSON v. DAVIS.—D. endorsed two promissory notes *pour aval*, at the same time marking them with the words, "not negotiable and given as security." The notes were intended as security to the firm of A. and R. for advances to a third person on the publication of certain guide books, which were to be left in the hands of the firm as further security, the proceeds of sales to be applied toward reimbursement of the advances. It was also agreed that payment of the notes was not to be required while the books remained in the possession of the firm. The notes were protested for non-payment, and A. having died, R., as surviving partner of the firm, and vested with all rights in the notes, sued the maker and endorser jointly and severally for the full amount. At the time of the action some of the books were still in the possession of R., and it appeared that he had not rendered the indorser any statement of the financial situation between the principal debtor and the firm. The Supreme Court of Canada decided that the action was not based upon the real contract between the parties, and that the plaintiff was not, under the circumstances, entitled to recover in an action upon the notes, and further, that neither the payee of a promissory note nor the drawer of a bill of exchange can maintain an action against an endorser, where the action is founded upon the instrument itself.

KENNEDY v. NEALIS.—Where a mortgagee of a vessel took possession and sold it to a clerk in his employment, who immediately transferred the vessel to the mortgagee, and the mortgagee managed the vessel until her loss, some months after, he was held by the Supreme Court of New Brunswick chargeable with the fair value of the vessel at the time he took possession.

THE SUCCESSION DUTIES.

In the matter of Province of Ontario against the estate of the late Alexander Cameron, of Toronto and Windsor, in respect of the succession duties upon estate of deceased, a judgment was last week rendered at Osgoode Hall by Judge Rose. His Lordship held the duties are to be computed and paid upon the amount of capital actually distributed, upon the final distribution, whether the same may have increased by accumulations or by rise in values, or have diminished. Until beneficiaries are entitled to possession or to the actual enjoyment of the moneys directed to be paid to them, the duties are not payable, and the amount cannot be ascertained until the time of right of possession accrues. This was a special case, apparently intended as a test.

—The shipments of cattle this season from Manitoba and the Territories, are likely to be the heaviest in the history of the North-West. Already, said the *Free Press* last week, the number exported is in excess of the total of last year, and yet Gordon & Ironsides have still 1,000 carloads to ship before the close of the season, which alone will aggregate between 17,000 and 18,000 head. Many of the western ranchers are contracting for the supply of cars next month. A feature of this season's operation has been the satisfactory prices paid farmers for their cattle.

Mercantile Summary.

A DEMAND of assignment has been made upon Aaron T. Martin, florist, Montreal. The estate is expected to pan out very poorly. Liabilities are stated at some $18,000, including mortgages.

AN Ottawa dry goods man, E. T. Fournier, is reported to be embarrassed, and an accountant is preparing a statement of affairs. The liabilities are expected to aggregate $16,000. He was formerly of the firm of Fournier Bros.

ELLIOT MCLATCHEY, of Salem, N.B., formerly a farmer, has been running a small saw mill for the past two years, but not successfully, and has assigned to the sheriff. He previously gave a deed of property for $2,000, and a bill of sale in machinery, etc.

THE sixteenth annua convention of the Society of Dairy Industry, of the Province of Quebec will take place at Nicolet, on Wednesday and Thursday, December 1st and 2nd. The society will publish a complete aud illustrated programme for the occasion.

AT Kincardine the private banking offices, formerly occupied by J. W. Rapley & Co., on Harbor street, have been taken possession of by Mr. John Boyer and his sons. Mr. Boyer has been in Kincardice for a number of years, and is favorably known throughout that part of Bruce county.

IN a letter from Michipicoton, Lake Superior, to his department, Mr. Archibald Blue, direc- of the Bureau of Mines, states that a vein of extraordinary richness has been struck near Wawa Lake, assaying as much as $600 to the ton, and which bids fair to keep up this showing. Mr. Blue reports that the weather in the gold district is becoming broken.

AN enlargement of their works has been completed by the Boston Rubber Company, at St. Jerome, Que., which has just opened its new factory. There is a large water power plant, for which it was necessary to lay over three hundred feet of steel tube, eight feet in diameter, all of which had to be riveted together in place, and a turbine wheel 250 horse power, made by the Jenckes Machine Company, of Sherbrooke.

WE have received from Mr. Croasdaile, general manager of the Hall Mines, Limited, operating in British Columbia, the following statement of the results of that company's smelting operations at Nelson for the period of thirty-three days, ending 30th Sept., 1897. The result of 33 days' smelting was that 6,210 tons of ore were smelted, yielding 522 tons of matte, containing (approximately) 249 tons copper, 141,860 ounces silver, and 98 onnces gold.

AN adjourned meeting of the creditors of E. F. Keene & Co., lumbermen, Keene's Siding, Que., was held in Sherbrooke last Saturday, when Mr. T. A. Trenholm, of Montreal, a former partner, and now a creditor for some $40,000, it is said, made a proposition to pay creditors 20 cents on the dollar. The offer was not entertained, and insolvency proceedings were instituted. It is said that there will be an effort made by some of the creditors to hold Mr. Trenholm still liable as a partner.

WHITECHURCH is in Bruce County. It is not a large place, being so far only a village, but it is noted for being a centre of agricultural production. The farms around it are well cultivated, and a good many of their owners have brick and stone houses and barns. Of both grain and cattle, a large stock is kept, and carloads are being shipped from that rising place almost every day. One of the features that struck our correspondent was its butter factory, of which Mr. M. G. Oliver is manager. There has been turned out of this factory already this season 135,000 pounds of butter, and which has brought into the treasury some $25,000, which has been distributed among the farmers of that section. The quality of this butter has earned it a good name in British markets. There is a cold storage in connection with the factory, with a capacity for about 75,000 pounds of butter, and every needed facility has been provided, such as good water and the latest improved equipment.

THE list of country failures in Quebec province since last issue is larger than for several weeks past, but the majority of the cases are dealers of small calibre. A. G. Dury, a tailor of St. Jovite, principally in a custom way, has made a voluntary assignment.——Drouin & Trudel, general store, Abenakis, have assigned under pressure from some of their creditors; liabilities are stated at $5,000 to $6,000.——Probably as the result of several recent suits, Henri Garon, of Causapscal, has made a voluntary assignment. He is a young man, not of age, whose father has long done business in the district, not successfully however, and who of late years has used the son's name as a cover.——Joseph Lacasse, of St. Hermas, formerly a clerk, began storekeeping, in a limited way, in the fall of 1895. He is now trying to arrange a compromise at 15 cents on the dollar.——Fournier & Langis, of Ste. Luce, whitesmiths, blacksmiths, and shopkeepers, are asking creditors to extend payment of their liabilities over twelve months.——G. Gagnon, a shoemaker, and grocer, of Thurso, was burned out on the 4th inst. He is insured for $2,300, but his loss exceeds this amount, and he is reported to have assigned.——A demand of assignment has been made upon Prosper Laplante, trader, Lachine.——A. F. Beaudry, grocer, Waterloo, has recently compromised liabilities of about $800 at 25 cents, cash.

TRIVIAL things will sometimes lead to a run on a bank by depositors. An instance of this occurred in Montreal on Thursday and Friday of last week. One of the French newspapers of the city published a dispatch saying that the Banque d'Espagne was likely to be in financial trouble, and by an error of the types, this appeared the Banque d'Epargne, which is part of the French title of the City and District Savings Bank. This was misinterpreted into a story that the bank last named was in trouble. Another circumstance was related by Sir William Hingston, the president. A woman wished to withdraw some of her husband's money without written authority, and, not being allowed to do so, put about the story that the bank was failing. These things started a run at the St. Catharine street branch on Thursday evening, 7th instant, which was continued on Friday, there and at the head office. Addresses were made by the mayor of the city at head office, and by Sir William Hingston at the East branch, reassuring the depositors, some of whom have taken their money to the Post Office Savings banks. Others having withdrawn deposits from the City and District on Friday returned them next day. On Saturday appeared a letter signed by Messrs. F. Wolferstan Thomas and George Hague, stating that the position and management of the bank were sound in all respects. This letter from two influential bankers helped to put a stop to the run, but it is said that over $1,000,000 was withdrawn while it lasted. Confidence has been restored, and many people are wondering why they were so disturbed.

The Gurney Foundry Co., Limited,
TORONTO.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

The Bell piano and organ factories at Guelph are now running overtime.

The six blast furnaces which were damped down in September, at the Glengarnock Iron and Steel Company's Works, owing to the scarcity of fuel, have been relighted.

Among a number of neat little advertising paragraphs, the following deserves special mention: "If you belong to the minority who don't know us, we would like to get acquainted with you." Here follows the signature of the firm issuing the card.

Sales of land in Manitoba by the Northwest Land Company, from January to September 30, were 23,690 acres for $130,059, against 9,109 for $57,950 for the same time last year, being an increase of 14,000 acres, or $72,108 for this year.

During the quarter ended 7th October, the value of exports to the United States from Vancouver consular district amounted to $702,906. Of this sum $217,226 was matte, $311,403 galena, $94,508 bullion. Shipments of lumber and fish have greatly fallen off.

According to the London *Leader* Dr. Nansen is organizing a novel business enterprise in St. Petersburg. He is forming an international company, with a capital of $37,500,000 to exploit the riches of the far north. On his last journey he found on the coast deposits of iron and nickel ores that are said to be enormous.

The English firm of C. Cammell & Co., of Sheffield, have made the lowest offer for the supply of about 110 tons of cast steel plates, cut into strips, for spring making, to the Belgian State Railway authorities, their price being about 70 francs per ton lower than that of the two native firms that tendered.

The British consul at Antwerp reports that "before the existence of the customs duty on margarine, some 12,000 tons of this article were introduced into Antwerp yearly. In 1896 the imports of this article scarcely amounted to 120 tons. There are now eleven manufactories of margarine in Belgium, which send out an aggregate of 700 tons per month."

During the season 1896-7 there were 217 sugar manufactories in operation in Austria-Hungary. The total production was 929,000 tons of sugar, made out of 157,500,000 cwts. of beet roots. The consumption in the country amounted to 305,062 tons of sugar, and the exports aggregated 416,845 tons of refined, and 101,386 tons of raw sugar. The average quantity of sugar contained in the beet roots was 12 per cent.

The agitation for extension of the Stonewall branch of the C.P.R. from its present terminus to Foxton is not new, says the Winnipeg *Free Press*, the question has been under consideration for years, and settlers in the district have interviewed both the Provincial Government and the railway company. They will now approach the Dominion Government with a view to securing its co-operation in aiding the enterprise.

A number of Manitoba lumber merchants, who were in Winnipeg last week, held a meeting on the 8th inst. and discussed the state of trade as they found it in their several districts. The principal topic was the question of payments for goods already sold. Among those present were: C. W. Plummer, Boissevain; T. A. Cuddy, Minnedosa; J. M. Neilson, Carberry; G. M. Miller, Virden; D. Stewart, Rosenfeld; J. B. Mathers, Glenboro.

At the meeting last week of the Hamilton Business Men's Association, vice-president Close being in the chair, a resolution was passed asking the Government to allow garnishing of civil servants' salaries. The association decided to discontinue advertising in programmes and kindred publications. Ex-Ald. Claringbowl read before the meeting an instructive paper on the city water pressure, his opinion being that the only permanent remedy for any lack of pressure is in enlarged mains or a special main for fire purposes.

Canadian Pacifics took a stronger turn upon the decision of the United States Attorney-General with regard to the discriminating tariff duties, says the London *Shareholder*, but this is certainly not the time to buy. These, however, are more favorably thought of than the Grand Trunks, whose rise from under 40 to nearly 70 in the so-called "guaranteed" stock is quite unwarranted, over discounting as it does, the probabilities of many years to come.

The mill and forge owners in Belgium are running their plants with fair regularity, but as the old orders are being worked off, they find it more and more difficult to replace them. The home demand is steady for certain descriptions of material, such as rails and special sections, but prices all round have a weaker tendency. In the Eastern districts of France the mills and forges are running regularly upon old orders, but there is very little new business doing, and only orders for small parcels are being given out.

A demand of assignment has been made upon J. & P. Kelly, tailors, Montreal, who have filed consent of abandonment. They failed in February last, with liabilities of $12,000, and made a settlement at 33⅓ cents, which they have not carried out.——C. F. Bridgeman, printer, at present undergoing a term of imprisonment for attempted shooting, has assigned on demand of one of his creditors, and owes $1,182.——Gouin Freres, grocers, Montreal, lately reported failed, have made a compromise at 2 cents.——Alex. Boiron, restaurant keeper, of the same city, has assigned, owing $2,550.

We have heard of the blue laws of Connecticut, but did not know that anything like them existed in New Jersey. It appears that two young men named Garlick, while riding a tandem wheel, on Sunday, in Rochelle Park, N.J., were run into by a wagon, which smashed the wheel. In order to recover its value suit was entered for $100. The case was heard by Justice Harrison, who decided that the law extended no protection to those who violated it, and "Riding a bicycle on Sunday for pleasure is against the law of the State." Such was his decision, based on an old statute which forbids such riding, except in going to church or summoning a physician.

From Nova Scotia the following late business embarrassments are reported: Thos. Hessian, of Halifax, the only partner doing business in the confectionery line under the style of Hessian & Devine, is asking creditors to accept 25 per cent. on liabilities of $9,000.——Leonard Erwin, of Halifax, dealing in electrical goods for the last two years in a small way, has assigned.——Mrs. Elizabeth Parker, of Digby, doing business under the style of the Digby Coal Co., has assigned, owing about $1,800.——J. A. McNeil, general store, Glace Bay, late of McNeil & McKinnon, who dissolved last spring, has assigned. Too liberal crediting to slow-paying customers is given as the cause of his troubles.——R. C. Pearl & Co., engaged in the fancy goods trade since 1877, being sued by several creditors, have found it necessary to make an examination into their affairs, and find they owe $7,000, with assets of $4,000. They make a proposition to pay 35 cents, payable in six months, secured by Mr. P.'s father-in-law.

Mercantile Summary.

TRADE in Connelsville coke is responding to the activity in iron. In the last week of September the production was 133,900 tons, as compared with 125,450 tons previously.

THE financial article of the London *Times* on Wednesday announces that a letter is being signed by a majority of the leading men of London, objecting to any movement by the Government in the direction of bi-metallism.

THERE are now building in shipyards on the Great Lakes twelve steel ships. One is a passenger steamer, two are revenue cutters, two ocean-going tugs, for New Orleans parties, two 400 feet steel freight carriers, three steel tow barges, and so on.

A RAFT of piles, which is stated to be the largest ever towed down the Pacific Coast, arrived last month at Oakland Harbor, in California, from the Columbia River. It contains 77,060 piles, each about 100 feet in length. It took 24 tons of chains to keep them together.

THERE is an advance in price of wrought-iron piping and tubing in the United States. A conference was held ten days ago at Pittsburg to agree upon a new list of discounts. Eleven mills were represented at the gathering, and a number more by telegraph and mail endorsed the movement towards higher prices. Freight is now paid only on carload lots.

A RECENT cable despatch to the Montreal *Star* says that British exports to Canada declined £12,000, or 4 per cent., in September; and £368,000, or 13 per cent., in the nine months ending with September, as compared with the same period last year. Imports from Canada increased £583,000, or 32 per cent., in September, and £2,141,000, or 24 per cent., in the nine months ending with that month.

EX-JUDGE GARY, of Chicago, counsel for the Consolidated Steel and Wire Co., tells a Chicago paper: "A plan is on foot to combine a number or rather a majority of the barb wire and wire nail mills of the country into one concern. The new company, which we hope to organize, will buy the mills outright, giving in exchange either cash or stock. The capital of the new company will be at least $50,000,000, perhaps $60,000,000."

APPROXIMATING the total shipments of iron ore from Lake Superior this year the *Iron Trade Review* thinks it probable that 11,000,000 tons will be slightly exceeded. The shipments through the "Soo" canal were 1,696,815 gross tons in September, and the total from all ports on October 1 was not far from 9,750,000 tons. All records will be broken by the year 1897; and what indicates that the consumption is in advance of other years is the disappearance of old dock stocks the past season.

—The first prisoner to be sentenced under the Habitual Criminal Act of New Hampshire, passed in 1893, is George M. True, who was convicted of three burglaries, and sentenced by Judge Blodgett in Concord the other day, to 15 years for each, a total of 45 years.

Andrew Carnegie, of Pittsburg, has perfected the largest iron producing combination in the world, by securing the lease of the Tilden mine. He will operate this big producer in connection with the Norrie and the group of mines which he owns in the Mesaba range.

Mercantile Summary.

A BAILIFF is in possession of the confectionery stock of J. H. Matthewson, at Orangeville, and James Viges, tinsmith, Stevensville, has made an assignment.

A. E. HAM & Co., dry goods dealers, Chatham, have asked their creditors to meet on the 20th inst., in the office of their assignee, Mr. Hallworth, of Toronto.

CREDITORS of Arbuthnot Brothers, printers, Toronto, met on Wednesday and gave the firm fourteen days to submit an offer of compromise. The liabilities are $12,000 and assets $11,000.

SHAREHOLDERS of the Montreal Woolen Mills Company met this week, for the purpose of ratifying a by-law passed by the directors, to increase the capital stock of the company to $200,000.

ON Monday last two by-laws were voted upon and carried by the ratepayers of St. Thomas, one for $10,000 to buy a site for a City Hall, the other to purchase the Idsardi site and put up the buildings.

W. E. SITLINGTON & Co., dry goods dealers, Sarnia, have been unable to arrange a settlement with creditors, and now assign.——W. Mowat, another dry goods dealer, in Napanee, finds himself in a similar position, and is obliged to assign.

ONE of the most recent incidents of the long-continued strike of the engineers of the United Kingdom, which threatens to embrace workers in various other industries to the number of possibly hundreds of thousands, is that the moulders of Sheffield and the boiler-makers of London have resolved to strike in sympathy. Word came yesterday from Melbourne, Australia, that the engineers of Victoria colony have voted $5,000 to help their brothers in Britain.

THE mortgagees are in possession of the stock of J. H. Black, general storekeeper at Springfield.——After being sued by one of his creditors for $700, J. B. Williams, a druggist at Guelph, makes an assignment. He has been four years in business.——O. H. Toll, furniture dealer, Leamington, assigns. He has been in poor health for some time.——The hotel of J. W. Boughner, St. Thomas, has been closed by the mortgagee, and his effects will be disposed of on Monday next.

A CLOTHING and haberdashery store was opened at Rat Portage in July last by H. E. Hallet, who removed thither from Winnipeg, putting in a stock of $1,200. Owing to severe competition he has been obliged to assign.——Other assignments are those of R. A. Warren, confectioner, Rat Portage. This is the result of six months' business with bad management.——C. H. Leicester, lumber dealer, St. Catharines, who has been four years in business.——A grocer and fancy goods dealer named Mrs. E. A. Bond, Orillia.

IT is worth noticing by Canadians that the live business men of Seattle, Wash., are working with the Seattle Chamber of Commerce to further the manufacturing and commercial interests of that city. Steps are to be taken to advertise the resources of the locality, and inducements offered to new industries. The great stimulus given to Washington State, particularly Seattle, by the gold interests of Alaska, is being very beneficially felt, and large numbers of investors are expected to locate and establish in the Washington metropolis enterprises for supplying the Klondike trade.

COMMENTING on the purchase of the Norrie iron mines, on Lake Superior, by the Carnegie-Oliver interests, a Cleveland Journal says no foundation can be ascertained for the report that the Carnegie Steel Company intends to build steel steamers of their own to carry iron and copper ore on the Great Lakes.

OFFICIAL returns state that during the month of September the number of British emigrants to Canada from Great Britain was 2,474, and of foreign nationalities 612; total 3,086. During the nine months ending the 30th September the total of British emigrants to Canada from ports of the United Kingdom was 13,978, and of foreigners 5,802.

IT is said that over one hundred train loads of cattle have been transhipped from Manitoba and the West, for export, via Montreal. Estimating twenty cars to a train and twenty head of cattle to a car, which is a safe estimate, from a railway point of view, there have been, together with those now on the road, about 41,000 in round numbers shipped from Montreal during the season.

THE big fire in Detroit on one night last week, which destroyed the opera house on the Campus Martius, of that city, and half a dozen large buildings on Monroe and Woodward avenues, took its start from a calcium light box in the theatre, it appears, and not from an acetylene gas tank. The loss is placed at $712,000, and the insurances amount to $398,000.

IN the early days of October, prairie fires driven and fanned by fierce winds swept over a large part of Manitoba. Bush fires, too, raged in several districts, according to the Winnipeg *Commercial* of the 11th. Fires had evidently been burning for days in the woods, and the gale of Saturday caused them to travel with fearful rapidity, resulting in enormous destruction, not only to the forests, but also to the scattered settlers. Those who have gone into the wood districts, east of the Red River, between Whitemouth and Winnipeg, since 1894 have suffered very severely. In a number of

General Manager and Secretary.

Toronto, 28th Sept., 1897.

cases they have lost houses, live stock, and in fact everything they possessed. In one case a family of seven persons were hemmed in and burnt to death. The small village of Bagot, in a wooded district west of Portage la Prairie, was also burned by a prairie and bush fire, but no lives were lost in that region.

THE mayor of Ottawa and the members for Prescott and Russell counties have sent a circular letter to the mayors of various towns and cities stating that the fearful fire which ravaged 300 square miles of Russell and Prescott counties last week "has resulted in the loss of five lives, rendered 2,000 people homeless, and destroyed farms, dwellings, stores, churches, schools, and property generally to the value of thousands of dollars. Relief is urgently needed for the sufferers." The Ontario Government has made a grant of $5,000, and several cities have also contributed. It is estimated that from $50,000 to $100,000 will be needed to avert hunger and destitution over the district ravaged by these bush fires. All the region around Saint Sauveur, in the St. Jerome district, is terribly damaged by bush fires also.

A HASTY ASSIGNMENT.

We now hear of the assignment of A. E. Rondot, of Amherstburg. His assignee is Mr. J. G. Hay, of Toronto, who has sent a man up to take charge. No particulars are obtainable of the condition of his estate, but he is understood to owe about $20,000. This assignment is probably the result of a suit brought against Rondot last month by W. B. Hamilton, for the balance of a compromised claim; and this suit was taken on the strength of the admissions made by Rondot in the box, on the occasion of his suing THE MONETARY TIMES for libel, the other day. But this assignment lessens the hopes of those, ourselves included, who have claims against him for goods or costs.

It has been our fortune during the last thirty years to have suffered several times in a like manner; namely, to have been sued by an occasional impecunious man, who deemed himself aggrieved by something said about him in THE MONETARY TIMES, and when we had justified ourselves before the law, as in the case of this Essex merchant, Rondot, we had the poor satisfaction of paying our own costs because they could not be collected from the estate of the plaintiff. These are unpleasant circumstances, but they are the lot of a journal which dares to say unpalatable things for the sake of preserving a decent standard of commercial morality.

Correspondence.

FOREST FIRES.

Editor MONETARY TIMES:

SIR,—I wish to call your attention to the Russell county fires, Casselman and South Nation, and the other villages. Most of those villages were well supplied with literature, showing that protective machines could be had cheap, but it seems almost impossible to get them woke up to the necessity of fire prevention. As many of your readers are not aware of values of modern fire-fighting appliance, I deem it wise to let you know that a hand fire engine, all complete, can be had for $150 (this includes the suction hose), and from that up to $300. In fact, you may advise your readers that fire appliance is now so cheap that merchants in country villages can buy them individually. In a village like Casselman, or South Indian, two fire engines, costing $300 each, would have saved the town, and the whole outfit, reels and hose, would have cost less than $1,000. Reels $100 each, or in round numbers $3,000, would give them class E outfit and a foundation for D. Mildmay is a sample of what a small village can do. That village of 900 population is enjoying D rating, simply because they were people of good judgment, and no boodlers got into their camp to prevent their getting fire protection. I saw a London engine from a spring puddle of water in a village in Manitoba save a $25,000-elevator and the C.P.R. station from burning down, while a similar one close to them burnt up; no buckets could get near either, but this little machine kept both wet and saved them. A steamer could do no more. If steam fire engines are wanted, they can be had at from $1,600 to $3,000, or even $6,000. So there is no excuse for not having protection.

I simply wish to give you powder to fan up some of those "put off" people, and let the world know that with the present price of appliances no one need go without protection, nor need the papers chronicle such scenes as Russell county presents, if the people would only prepare for it. I think I have shown you clearly that those villages can blame themselves for their unhappy position to-day.

Yours truly,
CANADIAN.

London, 8th October, 1897.

UNREADINESS FOR FIRE.

Editor MONETARY TIMES:

SIR,—I have taken a notion to write to you on the subject of the way that people in the smaller places in Canada tempt Providence. I mean by that that the councilmen or the people of the place care nothing whatever about the risks of fire, and do not do anything to make preparations against the day of fire. They say, "We are all right, and have been all right, and have not had a fire for ten years, so we do not have any need to get fire appliances, at a great cost to keep up."

I say it is a sin and a shame to talk like this. The very first thing the village selectmen or councillors should do when the people of the place have spent good money to put up stores and dwellings, and churches and schoolhouses, is to make some arrangement to keep the fires *that will come* from burning up the property in the place.

Now, sir, I hope you will speak out on this subject. I know your paper goes to many people in many places. I hope you will argue the case; show them how foolish they are to leave things to chance, as they do. And tell them that it is money well invested to put money into waterworks or fire engines. I know that people in some towns kick because they are charged too much insurance by the insurance men, and they don't propose to be bullied by the insurance companies. And I don't blame these places altogether, because it seems to me the more the insurance men get the more they always want.

But I have been in places (and more than one or two or three) that have been fairly swept by fire, and no waterworks nor fire engines in them—hardly a bucket or a ladder to make a fight against the fire with. When I think of Magog in this province, and two or three more places in Ontario that I have been in, just after a big fire that has broken the hearts of the business men, it makes me hot to see so much carelessness. And now this terrible Casselman and South Nation business, and bush fires, and no protection at all! It is a necessity to get folks roused up somehow.

J. MCKITTRICK.

Sherbrooke, Oct. 8th, 1897.

Japan is to have an oil trust—a genuine, up-to-date, all-embracing oil trust. The discoveries of adequate fields of petroleum, the extensive demand for the product, not only in Japan, but throughout all Asiatic countries, and the remunerative price which the oil commands, has suggested the formation of a syndicate to control the entire output. Such a syndicate or trust is about to be organized in Tokio. In other words, Japan is to be fully initiated into the most advanced product of Western civilization.—*Oil and Drug Reporter.*

THE SITUATION.

Great Britain has definitely decided not to take part in a conference on the seal question, in which Russia and Japan will be represented. The difference between the United States and Great Britain arises under the Paris award. They are the only two nations to that agreement; the question, whether it is to be continued or superseded, is for them to setttle. The United States has invited the two other nations to take part in the conference. These three countries will hold a conference in the absence of England, whose rights they are not competent to abrogate or affect. England is willing to discuss the matter with the United States, but not to permit that country to bring in two others. That Canada, which has a direct interest in the question raised, has a right to be heard, is conceded by Great Britain. Russia and Japan have sealing interests of their own, but they are not the interests at stake under the Paris award.

In Secretary Sherman's reply to Lord Salisbury we have the American official account of the negotiations to admit Russia and Japan to the Sealing Conference. According to the summary of that reply published, Mr. Hay, the American minister, in a conversation, made specific reference to the participation of Russia and Japan, when Lord Salisbury, instead of assenting, said he would advise with the officials of the Foreign Office. After this, for the first time, Mr. Hay wrote to Lord Salisbury, expressing the hope that Russia and Japan would participate in the conference. In this state of the negotiations the United States had no right to assume what the answer of the British Foreign Office would be; and any belief that the suggestion of Mr. Hay would be accepted was entirely unwarranted by the facts. In the meantime, had the United States communicated on the subject with Russia and Japan? News telegrams from Washington inform us that the United States is likely to accept England's proposal for a conference in which Canada will participate. A second conference between the United States, Russia and Japan will take place. The hope is expressed at Washington, that the conference with Great Britain may take place first. If this should happen, it is assumed that the second conference will have before it the attitude taken by Great Britain in the first; but the second conference cannot cover the special ground which is the peculiar domain of Great Britain and the Republic. Russia and Japan have interests apart from those of the United States and Canada. No desirable object could be served by bringing into a conference between Great Britain and the United States elements distinct from the objects for which the Paris Arbitration was brought into existence. Things saparate in themselves will be best treated, when dealt with separately.

In the orders given by the Washington Government to send the "Yantic," a war vessel of 900 tons, from Boston, through the Canadian canals, to serve as a training ship for the Michigan Naval Reserve, a complete change of policy on the part of that Government is the most prominent feature. That the "Yantic" is to be sent without her armament may be an ingenious way of getting round the treaty; but if, as is admitted, she is to receive her armament on the water, after her arrival, she will not the less still continue to be a vessel of war. If such a vessel may, by such means, be sent to Michigan, what is to prevent others being sent in the same way to all the other States that border on the lakes? What is the difference, in the case of the "Yantic," between a training ship and a vessel of war? Up to the time of issuing the order for her removal, the "Yantic" has been recognized as a vessel of war, belonging to the United States navy. Does she cease to be such by taking her armor off, sending her to Lake Michigan and putting armor, new or old, on again, and calling her a training ship? No doubt war vessels, like other things, wear out; but so long as a war vessel is capable of carrying armor, a war vessel she remains. There is to be a transfer of ownership, too, to the State of Michigan. The Michigan Naval Reserve is to take charge of her, even in our waters, and personally to get her through our canals. It cannot be that the change of ownership is intended to relieve the United States of a possible charge of a breach of the treaty which forbids the increase of war vessels on the lakes. Canada is entitled to know what is the reason for this remarkable departure from a policy which refused to permit vessels of war to be built on Lake Erie and sent down to sea, even without their armament. If one country bordering on the lakes can have training vessels on these waters, so can the other. But this is not desirable. The best policy, as well as the best guarantee for continued peace, is a rigid adherence to treaty obligations.

New interest in the carrying trade has been created by the presence in the country of Mr. Girdlestone, whose mission is said to be to ascertain why so small a proportion of the trade of the West finds an outlet through the St. Lawrence. As a large stockholder in the Grand Trunk Railway he has a strong personal interest in finding whether a much larger proportion of this traffic cannot be diverted to this route. One of the things which attracts his attention naturally is the dock accommodation at Montreal. . If his suggestion be adopted, that Sir Wolfe Barry, an eminent English dock engineer, be called upon to make a plan for the improvement of the port, the divergence of opinion between the Montreal Harbor Trust and that of the Public Works Department might be overcome. It is not creditable to Canadian enterprise that the St. Lawrence route is beaten by the little Erie Canal. The Government has done, and is doing its part, and it is now claimed that the failure lies, to a large extent, with the carrying interests, whom Mr. Tarte accuses of not supplying the necessary facilities for doing the work. In this connection, an extraordinary anachronism is just now forced on public notice. When transhipment at Kingston was the rule, no elevators were built at that port; now, when the near approach of the completion of the enlargement of the canals is reached, the corporation of Kingston gives aid to the construction of elevators, which may be about ready when the need for them will have passed. Our canals cannot be pronounced a failure. Before they were constructed, grain was sometimes sent down the rapids on rafts. But where we have failed has been in the effort to obtain for this route the grain trade of the West; first, the American trade; now, our own. Mr. Cooley was probably not far wrong when he said that all we can compete for of the American surplus grain is that which is exported to Europe.

A telegram from San Francisco brings the news that a mining engineer of Seattle, Mr. F. C. Farnham, has organized a company to build a railway from Skaguay to Lake Bennett, over the White Pass. The cost of a narrow guage road is put at the modest sum of $450,000. The expectation is said to be that the road can be ready for traffic by June 1st, 1898. Whether by this route or some other, perhaps by more than one, the means of reaching the Klondike are likely to be improved before the end of 1898; something in this direction may be done, and probably will be done, before the opening of navigation next year. Meanwhile, it cannot be said that all cause of anxiety for the miners who have gone there is over. One account represents that there are about 7,000 persons at Dawson City, and only 100 houses to shelter them. If this be anywhere near the truth, there would scarcely be standing room, under the roofs, for all these people. That there will be food enough for all, supposing all to have the means of commanding it, is far from being beyond doubt. Should the projected railway over the White Pass go on, it may afford work for several disheartened men, who, having reached the Pass, are unable to finish their journey this season. Dr. Howard, who had charge of one collection of adventurers, known as the Wood party, has pronounced the expedition a failure, and added that he will be unable to fulfil the contract to feed them till they reach Dawson City. There will be many to whom work on the railway might prove the means of salvation; but there are others unfitted for such work, and for whom no efficient help is within sight.

Just at the time when the National Council of Switzerland has decided by a majority of nearly three to one, to buy five of the principal railways of the country, the United States Government is forcing the Union Pacific road to a sale, on its first mortgage. But the purchase of these Swiss railways is not completed by the vote of the National Council. The proposal has to run the gauntlet of the referendum, or popular vote. This vote may be influenced largely by the spirit of States rights, which is antagonistic to the attempts of the National Council to extend its jurisdiction, in every direction. The vote of the National Council marks a tendency in Switzerland to State ownership of railways; in the United States no such tendency is visible on the occasion of the sale of the Union Pacific. In Canada we have been following neither of these plans exclusively: the Government built the Intercolonial railway, and it has given the bulk of the means necessary for building the C.P.R., taking no mortgage in return. Whatever may be thought of other methods of procedure in railroad construction, the least reasonable is that which supplies the means out of the public resources and makes a present of them to private parties. And yet, it cannot be said that the end of this system is within sight.

At a public dinner to Mr. Blair, at St. John, N.B., the rival ports of Halifax and St. John came up in a midnight speech. Mr. Blair mentioned hypothetically what a $500,000 grant might do for the later port. As between the two ports, he favored the plan of the Government, doing for both what is necessary in the way of facilities, and then leave them to prove their superiority by their works. In this connection he was inclined to assign to Halifax the winter passenger traffic, and to St. John the winter freight; he thought each ought to be satisfied if it got that. In this speech, Mr. Blair showed a preference for a great Government railroad across the country, saying that it was perhaps, putting it mildly, matter of regret that such a road had not been obtained. The opportunity having passed, it does not follow that he would think of constructing one in the actual condition of things.

SOME POINTS AT THE BANKERS' CONVENTION.

In the comprehensive address of Mr. Wolferstan Thomas before the Canadian Bankers' Association there is food for reflection. And while a number of the statements and statistics it contains are of value to his immediate auditory among Canadians, the whole could scarcely fail to prove instructive to the bankers and Treasury officials from the United States, who were privileged members of the convention, and showed themselves desirous to learn more about Canada, and especially to be fully informed upon its excellent system of banking.

The all but universal answer made by observant business men of to-day to the question: What does Canada most need? is that she needs more people. Government she has, wholesale and retail, in plenty; and she seems to like it. Trade methods and a manufacturing policy, the wisdom of which is not here in question. A banking system admirably adapted to her requirements. Transportation facilities which are the wonder of other peoples. And material resources as rich as ever came from the hand of Providence. The benefit of all these gifts and blessings could be heightened in progressive degrees were our population doubled or trebled. It is true, then, that no subject exceeds in interest to us the immigration problem. And we are especially pleased to find that Mr. Thomas makes it a topic of one of his foremost and strongest paragraphs. "This momentous question" [of immigration] he tells the bankers, "has been left too exclusively to statesmen and philanthropists, while political economists like ourselves should be equally concerned in its consideration." This is not too much to say. It is the duty of every true patriot to not only lend his aid in retaining the population we already possess, inheritors as we are of so great blessings, but to work strenuously towards increasing by immigration of the right kind, the number of those who are to build up the Canada of the future. And it is not Yukon enthusiasts or speculators that we most need. Settlers of steady industry, with decent morals and fair intelligence are likely to do more good for themselves and for the country. Nor should it be left for the Governments of Province or Dominion, to do all the work to this end. Immigration associations, with reporting agencies near and far, may do much. Yet, individual effort by thousands who have friends and correspondents in Europe, may accomplish more than has been dreamed of, in correcting misapprehension as to the climate of this country, and in setting forth the cheering prospects that here await the willing worker.

Touching the question of Government savings and Post Office savings banks, institutions which furnish the Government at Ottawa with the use of a large and growing aggregate of deposit moneys of the people, any banker or representative of bankers would naturally be found opposing the continuance of the system. It is well, however, to consider the position. Here is an aggregate of $49,000,000—namely, $15,980,000 in one series of these banks, and $33,080,000 in the other—which is held by the Government and invested in public works, instead of being used by merchants and forwarders. It is a portion of the public debt, though no specific paper obligations are issued against it. Year by year interest accumulates upon this, say, a million and a half every year. How do our finance ministers treat this additional debt? He would be an uncommonly frank minister who would not be satisfied to have the public consider that such accrued interest formed a portion of his yearly surplus. And no application to Parliament is made for permission to increase these principal borrowings from the people to $60,000,000, or $80,000,000, or $100,000,000, while specific parliamentary authority is required to effect a debenture loan of even a million abroad. There is an inconsistency here, and the anomaly is by no means free from hazard. In England deposits of a like kind, the savings of the people, are invested in consols, a very different disposition of them. Another consideration in this connection, and not a slight one, is that the Government pays for these deposits 3 per cent., *plus* the cost of administration, whereas our newest loan of $10,000,000 will probably be floated to yield, including all expenses, a rate of about 2¾. Is not this questionable economy?

A prudent course, it seems to us, would be for the Government to issue its obligations, of a definite character, against the present sum in its savings banks and P.O. banks. And a natural sequence to this would be the passing of a law that any subsequent deposits taken by these banks should have bonds or other obligations issued year by year against them, instead of leaving the whole an open loan.

The shortening of credit is a subject that well merits even more attention at a gathering of bankers than it seems to have received last week. The wholesale trade is mentioned in particular as at fault with regard to the injuriously long credit it gives its customers. And truly the reform which has been looked for year by year in this respect is slow in coming. Have the banks done all they might have done in discountenancing what the president of the Bankers' Association admits is "to the detriment of trade and banking interests?" We should be glad to have any considerable number of them instance any movement of a concerted character in this direction, whatever one or two of them may have done in assisting such discouragement by voice or pen. It would startle some of our leading bankers, possibly, could they hear the strong opinions we have heard expressed from time to time as to the encouragement given by banks to the discounting of renewals. In the matter of insolvency legislation, the suggestion made by Mr. Thomas as to creating special judges experienced in commercial affairs to deal with insolvency proceedings, seems not unworthy of attention.

THE DUTY OF MUNICIPALITIES.

In the course of discussions or conversations between residents of villages or towns on matters relating to features of administration, the question has often come up: What is the most important thing in a new town? and it has been variously answered.

In the opinion of one man good drainage was the first need—and he was not far wrong; this is a feature too often neglected. Another thought good streets and sidewalks were most important. A third stuck up for a town park, sodded, and for trees planted in the town. And the next man mentioned a good treasurer and a hospital. The fifth speaker, who had known what it was to lose thousands by fire in a place which had none of these things, and no fire appliance either, put it strongly when he answered the chairman's call, by saying, "Put me down as claiming that waterworks, or fire protection of some sort is the first requisite, for what becomes of all the others when fire sweeps the village?"

Two communications we have had this week from different provinces mark the interest that is being taken in the subject of fire protection for villages and towns. As to what is said in one about the forest fires that last week destroyed the group of villages near Ottawa, it might not have been possible with any appliances to save them or other places surrounded as they were by the bush. But seeing that human lives have been lost by the recklessness which places hundreds of people in a spot where they may be surrounded by fire and burned to death, with no chance of escape, the question arises: Should not some power higher than a village council interfere to avert the risk which unthinking or uncaring people take in making settlement in a fire-trap?

As to the other letter, which tells us of places which "kick because they are charged too much insurance, and don't propose to be bullied by the insurance companies," it would be a god-send to scores of unprotected or ill-protected places that we know of in Canada, if they could be bullied or coaxed, or somehow driven into making the arrangements for protection against fire that common sense dictates. If such places as our correspondent tells of think that the associated underwriters ask more of them than is needed, let them go elsewhere and see if mutual company managers are any greater believers in luck in fires. We venture to say that even a municipal bureau of indemnity against fire, such as certain places, little and big, are threatening us with, if formed even with the machinery that was foreshadowed in an Ontario bill a session or two ago, would be likely to exact from the ratepayers for their own protection .appliances that would cost not much less than the insurance companies now insist are necessary.

In the Municipal Amendment Act of 1895, which is 58 Vic., it is stated, section 42, that "Upon the petition of a majority of the ratepayers entitled to vote on money by-laws in any defined area or portion of a police village, representing in value more than one-half of the assessed real property within such portion or area," the township council where such village is situate may pass by-laws for the purchase of a fire engine and other appliances, and for water supply for fire protection. The same authority may define what real property within such area will be benefited by the proposed fire protection and is to be charged with the cost thereof; and may also make provision for assessing and levying on the real property defined by the by-law, the cost of managing and maintaining the fire engine and appliances, and providing the necessary water supply. By another section it is provided that the council may levy the cost of engine, appliances and water supply upon the real property to be benefited, or may spread it over five to ten years by debenture, and may levy upon such property.

Rarely if ever, we believe, is it found that the merchants of town or village object to reasonable expenditure for fire protection. Rarely, either, do manufacturers refuse to provide for their factories the appliances which experience has shown to be necessary to lessen the risk of fire. It is not the merchants nor the mill men that stand in the way of protecting a town against being fire-swept. Time and again the retired farmers and self-satisfied fossils living in the outskirts of village or town, their own dwellings being distant or isolated, have through ignorance or penuriousness kept the public-spirited men of the place from buying fire engines or putting in waterworks for the common protection. This we have learned, not yesterday or this year, but over and over again from those who negotiated for chemical engines, or steam or hand engines, with small towns. Municipal officers tell the same thing.

Now if, as we have sometimes heard it said, difficulty in applying section 42 of the Municipal Amendment Act of 1895 arises when it is sought to define the area of property in a village that can properly be assessed for the cost of fire appliances, it seems to us that discretionary power is given at any rate by the subsequent section "to levy the cost of engine, appliances and water supply upon the real property to be benefited." And it is not easy to perceive the justice of a levy that would place the whole cost of fire appliances upon the shoulders of thirty or forty mercantile property-owners in the heart of the village, and leave a dozen niggardly residents to escape the levy because their isolated dwellings are not admitted to be directly "benefitted" by the expenditure made for the common safety. We should make the effort to compel such short-sighted folk to pay their share toward what is for the good of all. And if the present law does does not effect this, let us have a law that will.

OUR LAKE MARINE INTERESTS.

There has been in recent years a wonderful growth of water-borne traffic from the ports of Lake Superior to the East. During the navigable season of 1896, no fewer than 18,615 vessels, steam and sail, passed through the locks at Sault Ste. Marie, between Lakes Huron and Superior, carrying 16,239,061 net tons of freight. The canals were opened for navigation only 232 days, and yet within that time almost twice as much tonnage passed through them as is registered in a whole year at the Suez Canal. It is, of course, to be borne in mind that the vast bulk of this traffic is iron ore, but some of it is grain; the still greater grain carriage from Lake Michigan ports flows downward to Lake Erie.

It has been the boast of Canadians that they share equally with the United States in the possession of the greatest inland waterways in the world, but the like share cannot be stated with truth of the advantages derived from the traffic which passes over them. In 1895, when 17,956 vessls, with a registered tonnage of 16,806,781 went through the St. Mary's canals, only 3.75 per cent. of the freight was carried in Canadian bottom. The vessel owners of this country, so far from competing actively with the Americans for freight to and from the North-western States, have been unable to hold the carrying trade with North-western Canada. The United States vessel owners have provided the most modern type of steel vessels, large, swift, and economical in fuel. And marine insurance companies discriminate in favor of such steamers, charging a half cent per bushel less on grain carried by them than by wooden vessels. Hence the average Canadian steamer, which is either of wood, or, if of iron, much less in size than the modern American boat, is handicapped from the start. What the western farmer or grain dealer wants is to get grain carried at the cheapest possible rate. The recent deepening of lake and river waterways by the United States Government, and the increase in size of boats, all tends to this end. The Canadian water carriers have not kept pace with this development. A few exceptions there are, and half a dozen modern steel steam carriers are in commission—and have deservedly made money. But the discreditable fact remains that, even with the recent spurt in favor of the St. Lawrence route, the bulk of our western wheat is carried to Prescott and Kingston *in United States bottoms.* Of what avail is it that we are blessed by nature with a great advantage in the St. Lawrence route to the sea, if we do not provide modern carriers upon its waters, and demonstrate that it is the cheapest route and the best.

During the present summer there have been indications that Canadians are making an effort to share in this traffic. But it is at the eastern end. Last week a contract was let by the Prescott Elevator Company for the building of three large steel tow barges to be used in conveying grain to Montreal. The work of constructing these boats will be carried on in Canada, by a Toronto firm. This same concern, the Bertram Company, has already in the present year completed four steel barges for use on the St. Lawrence from Prescott to Montreal. The route from the Upper Lake ports to the Atlantic, by way of the St. Lawrence, has been found by the several companies who have invested in modern grain carrying vessels to be superior to that by way of the Erie Canal and New York. The Northwestern trade has by no means reached its maximum development. Observant men who are well informed, consider that it is, as yet, in its infancy. Capital wisely invested in building up a Canadian lake merchant service is very likely to prove profitably employed. Certainly we have not, so far, risen to the level of our opportunities in this respect.

MONTREAL HARBOR.

To the conference between the Minister of Public Works and the various representatives of Montreal commerce, Sir Wilfrid Laurier went, to gather information that would assist the Government in forming an opinion on a question which he and his colleagues will have to decide. As between the different plans of harbor improvement, not very much was said; nothing that would enable any one to determine their relative merits. How to provide ample accommodation for the shipping of Montreal is largely an engineer's question. The rule is that when the Government supplies any considerable portion of the outlay on harbor improvements, it is guided in what it does by the advice of its own engineers; those who contend that this rule should not be followed on the present occasion must feel the necessity of making out a strong case. What proportion of the outlay will be borne by the Government, and what will come from local contributions? Till the financial question is settled, that of relative control has scarcely a basis for argument Will the authorized endorsation by the Government of $800,000 of Montreal Harbor bonds suffice, or is not more expected of the Government? The first minister distinctly took the ground that the Minister of Public Works would have to decide the question of properly equipping the port. The resolution was brought forward that the Department of Public Works and the Harbor Commission should decide upon the location and dimensions of two quays. Suppose they continue to disagree, it is clear that the Government, as the party responsible to Parliament, must decide.

CLEARING HOUSE RETURNS.
